

# Directive 056: Energy Development Applications and Schedules

**May 1, 2014**

Effective June 17, 2013, the Energy Resources Conservation Board (ERCB) has been succeeded by the Alberta Energy Regulator (AER).

This edition of *Directive 056*, effective May 15, 2014, carries the AER logo and contains changes to section 8 and, correspondingly, the table of contents. No other changes have been made to the directive.

Some phone numbers in the directive may no longer be valid. Contact the AER Customer Contact Centre at 1-855-297-8311 or [inquiries@aer.ca](mailto:inquiries@aer.ca).

# Directive 056

Revised edition September 1, 2011  
Effective September 26, 2011

## Energy Development Applications and Schedules

The Energy Resources Conservation Board (ERCB/Board) has approved this directive on August 22, 2011.

## Contents

1	Introduction .....	1-1
1.1	Purpose of This Directive .....	1-1
1.2	What's New in <i>Directive 056</i> .....	1-1
1.2.1	For the Electronic User .....	1-1
1.2.2	Electronic Application Submission .....	1-1
1.3	How to Use This Directive .....	1-1
1.4	Requirements, Enforcement, and Expectations .....	1-2
1.5	Continuous Improvement .....	1-3
1.6	<i>Directive 056</i> Help .....	1-3
2	Participant Involvement .....	2-1
2.1	Overview .....	2-1
2.2	Planning a Participant Involvement Program .....	2-2
2.2.1	Who to Include .....	2-2
2.2.2	What Information to Disclose .....	2-3
2.2.3	Personal Information .....	2-5
2.3	Implementing the Participant Involvement Program .....	2-5
2.3.1	Personal Consultation and Confirmation of Nonobjection .....	2-6
2.3.2	Notification .....	2-7
2.3.3	Addressing Concerns/Objections and Appropriate Dispute Resolution .....	2-9
2.4	Documenting the Participant Involvement Program .....	2-10
2.5	Expiry of the Personal Consultation and Notification Program .....	2-10
3	Energy Development Licence Applications (Schedule 1) .....	3-1
3.1	Overview .....	3-1
3.2	Considerations Prior to Filing a Licence Application .....	3-1
3.2.1	Business Associate Codes .....	3-2
3.2.2	Prelicensing Approvals/Waivers .....	3-3
3.3	Applicant Responsibilities .....	3-3
3.4	Submission Procedures .....	3-4
3.5	Licence Amendments .....	3-4

3.6	Incomplete Licence Applications .....	3-4
3.7	Checking the Status of a Licence Application .....	3-5
3.8	ERCB Application Licensing Process .....	3-5
3.8.1	Routine Applications .....	3-5
3.8.2	Nonroutine Applications .....	3-7
3.9	Voluntary Self-Disclosure .....	3-9
3.9.1	Self-Disclosure Applications and Participant Involvement Requirements .....	3-10
3.9.2	Self-Disclosure Application Processing Time .....	3-10
3.9.3	Self-Disclosure Application for Well Licences .....	3-11
3.10	Application Disposition .....	3-11
	Schedule 1: Applicant General Information .....	3-13
3.11	How to Complete Schedule 1: Applicant General Information .....	3-15
4	Application Audit Process .....	4-1
4.1	Overview .....	4-1
4.2	Audit Selection .....	4-2
4.2.1	Full or Partial Audit Review .....	4-3
4.2.2	Immediate Audit .....	4-3
4.2.3	Prelicensing Audit Reviews .....	4-3
4.2.4	Link to ERCB Field Surveillance Inspections .....	4-3
4.3	Audit Documentation .....	4-3
4.4	Compliance and Enforcement .....	4-4
4.4.1	Voluntary Self-Disclosure .....	4-4
4.4.2	Acquisitions .....	4-7
4.4.3	Audit/Inspection Categories .....	4-7
4.4.4	Compliance Records .....	4-7
4.4.5	Enforcement Review Process .....	4-7
5	Facility Licence Applications (Schedule 2) .....	5-1
5.1	Overview .....	5-1
5.2	Project Submissions .....	5-1
5.3	Licence Expiry .....	5-1
5.3.1	Licence Extensions .....	5-2
5.4	Category Type and Consultation and Notification Requirements .....	5-2
5.5	Exemptions .....	5-5
5.5.1	Single-Well Facility Sites .....	5-5
5.5.2	Other Facilities .....	5-6
5.5.3	Exempt Activities .....	5-7
5.6	Records Correction .....	5-7
5.7	Licence Amendments .....	5-7
5.8	Participant Involvement Requirements .....	5-8
5.9	Technical Requirements .....	5-11
5.9.1	Emergency Response Planning .....	5-11
5.9.2	Licensee Liability Rating .....	5-11
5.9.3	Proliferation .....	5-12
5.9.4	Facility Design Criteria .....	5-13
5.9.5	Sulphur Recovery .....	5-13
5.9.6	Process Flow Diagrams .....	5-14
5.9.7	Total Continuous Emissions .....	5-15
5.9.8	Compressor and Pump Additions .....	5-16
5.9.9	Setback Requirements .....	5-17
5.9.10	Plot Plans and Spacing Requirements .....	5-18
5.9.11	Vapour Recovery and Odour Control .....	5-19

5.9.12	Noise Requirements .....	5-20
5.9.13	Production Measurement Guidelines .....	5-21
5.9.14	Alberta Environment .....	5-21
5.9.15	Alberta Culture and Community Spirit .....	5-21
5.9.16	ERCB Environmental Requirements .....	5-22
5.9.17	Working Interest Participants .....	5-22
5.9.18	Additional Application Requirements .....	5-22
5.10	Audit Documentation Requirements—Schedule 2: Facility Licence Application .....	5-22
5.10.1	Step 1: Identification .....	5-23
5.10.2	Step 2: Participant Involvement Requirements .....	5-23
5.10.3	Step 3: Emergency Response Planning .....	5-25
5.10.4	Step 4: Application Type .....	5-25
5.10.5	Step 5: Design Criteria .....	5-25
5.10.6	Step 6: Technical Information .....	5-26
5.11	Audit Documentation Requirements for Schedule 2.2: Gas Plants—Facilities .....	5-28
5.11.1	Step 1: Identification .....	5-28
5.11.2	Step 2: Total Recovered Products .....	5-28
5.11.3	Step 3: Technical Information—Sour Gas Proliferation .....	5-29
5.12	Audit Documentation Requirements for Schedule 2.3: H <sub>2</sub> S Information—Facilities .....	5-29
5.12.1	Step 1: Identification .....	5-29
5.12.2	Step 2: Gas Treating and Processing Information .....	5-29
5.12.3	Step 3: Technical Information—Setback Requirements .....	5-30
5.13	Audit Documentation Requirements for Schedule 2.4: Compressors/Pumps—Facilities .....	5-31
5.13.1	Step 1: Identification .....	5-31
5.13.2	Step 2: Compressors and Step 3: Pumps .....	5-31

6.19 Status Codes for Pipeline Installations .....	6-58
7.1 Well Category Type and Consultation and Notification Requirements .....	7-4
7.2 Lahee Classification .....	7-12
7.3 New Well Initial Confidential Status Based on Lahee Classification .....	7-15
7.4 Drill Cutting Sample Requirements .....	7-20
7.5 Setback Requirements for Wells Containing H <sub>2</sub> S .....	7-22
7.6 Well Application Audit Checklist .....	7-44
7.7 Well Application Nonroutine Checklist .....	7-47
7.8 Regulation, Well Type, and Substance .....	7-63
7.9 Lahee Classification .....	7-63
7.10 Confidential Status .....	7-64

## **Section 1      Introduction**

### **1.1      Purpose of This Directive**

The Energy Resources Conservation Board (ERCB) *Directive 056: Energy Development Applications and Schedules* presents the requirements and procedures for filing a licence application to construct or operate any petroleum industry energy development that includes facilities, pipelines, or wells.

*Directive 056* is incorporated by reference into the *Oil and Gas Conservation Regulations (OGCR)* and serves as an extensive reference document about the rules that govern energy development in Alberta. This directive is not all encompassing and may not cover all situations. Operators, licensees, and applicants must be familiar with all provincial and federal legislation related to energy development. If a unique situation arises for an energy development proposal not covered in this directive, contact ERCB Facilities Applications for further direction.

When an applicant files a licence application with the ERCB's Facilities Applications group, it makes a commitment that it understands and will follow the appropriate participant involvement, audit, and technical requirements for energy developments as described throughout *Directive 056*.

*Directive 056* is both a procedural manual on how to file a licence application and a regulatory document on the licence application process. While *Directive 056* encompasses the legal requirements of all licensees under the *OGCR*, the *Pipeline Regulation*, and other regulations stipulated by the ERCB, approvals, or licences from other government agencies may be required outside the *Directive 056* licensing process.

### **1.2      What's New in *Directive 056***

The 2011 edition of *Directive 056* incorporates changes that have resulted from the introduction of other ERCB directives and numerous updates and clarifications that have been identified by stakeholders. A summary of the additions to this edition of *Directive 056* is found in Appendix 1.

#### **1.2.1    For the Electronic User**

*Directive 056* is formatted with electronic links to assist users in moving quickly from one section to another, as well as linking to applicable regulations, Web sites, and publications recommended in the directive.

#### **1.2.2    Electronic Application Submission**

The Facilities Applications' EAS system is able to accept applications for wells, surface facilities, pipelines, and oilfield waste management facilities.

### **1.3      How to Use This Directive**

The main sections of *Directive 056* are as follows:

- Section 2: Participant Involvement describes two tiers of personal consultation and notification—required and expected. In addition, this section lists the information an applicant must include as part of its public information package and describes the ERCB's suggested process for dealing with outstanding public or industry

concerns/objections. Participant involvement requirements and expectations for specific licence application types are in Sections 5, 6, and 7.

- Section 3: Energy Development Licence Applications describes requirements and expectations that apply to all licence application types. This section also includes a self-disclosure process that provides applicants the opportunity to disclose incorrect pipeline and facility licence details that it has identified as incorrect on the licence. This process may also be used if a company wishes to disclose an existing unlicensed facility or manually disclose unlicensed pipeline/pipeline installation and submit an application for the required licence.
- Section 4: Application Audit Process gives an overview of the Facilities Applications' audit process and the audit requirements that apply generally to all applicants. Detailed audit document requirements for specific licence application types are in Sections 5, 6, and 7.
- Section 5: Facility Licence Applications describes the application procedures specific to applying for a facility licence. This section is followed by Schedule 2: Facility Licence Application, Schedule 2.1: Working Interest Participants—Facilities, Schedule 2.2: Gas Plants—Facilities, Schedule 2.3: H<sub>2</sub>S Information—Facilities, and Schedule 2.4: Compressors/Pumps—Facilities.
- Section 6: Pipeline Licence Applications describes application procedures specific to applying for a pipeline or pipeline installation licence. This section is followed by Schedule 3: Pipeline Licence Application, Schedule 3.1: Segment/Installation Identification, and Schedule 3.2: Technical/Environmental Information.
- Section 7: Well Licence Applications describes application procedures specific to applying for a well or multiwell licence. This section is followed by Schedule 4: Well Licence Application, Schedule 4.1: Working Interest Participants—Wells, Schedule 4.2: Multiwell Pad Location, and Schedule 4.3: Well H<sub>2</sub>S Information.
- Section 8: Additional Application Requirements (Special Circumstances) describes additional application requirements specific to certain areas or circumstances.
- Appendices 1 through 12 contain supporting reference documentation.

#### 1.4 Requirements, Enforcement, and Expectations

ERCB requirements and recommended practices are numbered sequentially within each section of *Directive 056*. “Must” indicates a requirement, and “recommends” and “expects” indicate a recommended practice. *Directive 056* differentiates between the concepts “requirement/must” and “expectation/should”:

- Regulatory requirements are those rules that industry has an obligation to meet and against which Facilities Applications may take enforcement action in cases of noncompliance. Regulatory requirements are identified as “must” statements in the text.
- Regulatory expectations represent recommended best practices or guidelines. Regulatory expectations are identified as “expect” statements in the text. While enforcement action is not applicable, expectations should be given consideration.

Table 4.1: Consequences for unsatisfactory events is a comprehensive list of all enforceable items related to energy development licence applications covered in

*Directive 056*. Individual unsatisfactory items and related enforcement are not identified elsewhere in the text.

#### 1.5    **Continuous Improvement**

Facilities Applications gathers information on the efficiency and effectiveness of *Directive 056* and the licence application process through application auditing and data retention activities, as well as by soliciting feedback from stakeholders.

As part of this commitment to continuous improvement, Facilities Applications anticipates the evolution of the procedures described in *Directive 056* in order to meet and exceed the needs of all stakeholders.

#### 1.6    ***Directive 056* Help**

Links to frequently asked questions (FAQs), on-line schedules, and other information about ongoing *Directive 056* initiatives are available on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Rules, Regulations, Requirements : Directives : Directive 056.

If you have a specific question not covered in this directive or available as an FAQ, contact ERCB Facilities Applications at

Phone: 403-297-4369

Fax: 403-297-4117

E-mail: [Directive56.help@ercb.ca](mailto:Directive56.help@ercb.ca)

## **Section 2    Participant Involvement**

### **2.1    Overview**

“Participant involvement” is an umbrella term encompassing all aspects of public, industry, and regulator interactions and communications. While the three main participant groups in energy development are industry, the public, and the ERCB, it is recognized that other groups also have a stake in energy development.

While the outcomes of most participant involvement programs are successful, *Directive 056* provides the energy industry with requirements and expectations to assist industry in its participant involvement efforts. Applicants must consider requirements and expectations both in advance of submitting an application for energy development and throughout the life of that development.

Most land in Alberta carries two titles and two sets of rights. The surface title gives the landowner control of the land’s surface and the right to work it. The mineral title gives the company or the person who owns the minerals under the land the right to explore for oil and gas.

Industry is required to develop an effective participant involvement program that includes parties whose rights may be directly and adversely affected by the nature and extent of a proposed application. The development and implementation of this program must occur prior to the filing of an application to Facilities Applications and include distributing the applicant’s information package and the required ERCB publications, responding to questions and concerns, discussing options, alternatives, and mitigating measures, and seeking confirmation of nonobjection through cooperative efforts. Industry is also expected to be sensitive to the timing constraints on the public (e.g., trapper, planting, harvesting, and calving seasons and statutory holidays).

The public is strongly encouraged to participate in ongoing issue identification, problem solving, and planning with respect to local energy developments. Early involvement in informal discussions with industry may lead to greater influence on project planning and mitigation of impacts. The public is also expected to be sensitive to the timing constraints on the applicant.

Participant involvement does not end with the issuance of a licence; it must continue throughout the life of a project. The development and creation of synergy groups at an early stage of the participant involvement program, especially in highly developed areas, will assist in fostering a collective and amenable approach to energy developments in the area.

All requirements and expectations detailed in this section apply to personal consultation and notification with all potentially directly and adversely affected persons, including First Nations and Métis. These requirements and expectations apply to the licensing of all new energy developments and all modifications to existing energy developments, as covered in *Directive 056*.

The Alberta Government issued its *First Nations Consultation Policy on Land Management and Resource Development* on May 16, 2005. Then in November 2007, to address how consultation with First Nations should occur in relation to certain land management and resource development activities, the government issued its *First Nations Consultation Guidelines on Land Management and Resource Development*. The

consultation required by the guidelines is a process that is separate from ERCB consultation requirements, and completion of the consultation guidelines should not be considered as a substitute for or as completion of ERCB consultation requirements.

A discussion of the concept and employment of participant involvement programs is in Appendix 11.

## 2.2 Planning a Participant Involvement Program

*Directive 056* sets out the consultation and notification requirements for the various energy developments in Tables 5.1, 5.4, 6.1, 6.2, and 7.1. These tables provide industry with a starting point for developing a participant involvement program and, as such, should not be viewed as the maximum. It is industry's responsibility to assess the area beyond the specified distance to determine if the radius recommended by *Directive 056* should be expanded. It may be necessary to increase the radius to include public interest groups or others who have expressed an interest in development in the area.

Local authorities and Alberta Sustainable Resource Development (SRD) play an important part in the plan for orderly land use and should be involved at an early stage in planning an energy development and participant involvement program. Additionally, local authorities, ERCB Field Centre staff, and the applicant's previous knowledge of the area may help identify needs in the community. Local ERCB Community and Aboriginal Relations (CAR) staff are also available to assist in the proactive engagement of stakeholders and resolution of public issues.

Project-specific participant involvement requirements are given in Sections 5.8, 6.8, and 7.10.

### 2.2.1 Who to Include

**Numbered statements represent requirements and expectations (see Section 1.4).**

- 1) The applicant must develop and complete the participant involvement program prior to filing an energy development application.
- 2) The applicant must ensure that its participant involvement program includes those parties within the radius identified by Tables 5.1, 5.4, 6.1, 6.2, and 7.1.
- 3) The applicant must include all parties with a direct interest in land, such as landowners, residents, occupants, other affected industry players, local authorities, municipalities, and other parties who have a right to conduct an activity on the land, such as Crown disposition holders.
- 4) The applicant must also include those people that it is aware of who have concerns regardless of whether they are inside or outside the radius of personal consultation and notification indicated in Tables 5.1, 6.1, 6.2, and 7.1.
- 5) The applicant must allow participants a minimum of 14 calendar days to receive, consider, and respond to notification of the proposed development. The applicant may file an application prior to the 14-calendar-day period if certain conditions have been met. Refer to Section 2.3.2.

- 6) The applicant is expected to communicate with local residents and other operators and to develop an effective participant involvement program engaging parties at an early stage of planning. The applicant is also encouraged to contact synergy groups.
- 7) The applicant is expected to consult with or to notify other parties that express an interest in the proposed development, whether located inside or outside the radius outlined in Tables 5.1, 5.4, 6.1, 6.2, and 7.1, and allow them the opportunity to obtain information specific to the proposed energy development and to understand its possible impacts.
- 8) The applicant is expected to document commitments made and have a process in place to monitor and follow up on commitments.
- 9) The applicant is expected to have consideration for the timing constraints on the public (e.g., planting, harvesting, and calving seasons and statutory holidays).
- 10) The applicant is expected to minimize the cumulative impacts of energy development and to show that they have applied good planning practices with respect to the public and the environment.
- 11) If the proposed development is part of a larger project, the applicant is expected to discuss the entire project and explain how it complements other energy development in the area.
- 12) During the planning of its participant involvement program, the applicant will have assessed its need to reach the broader public and may determine that an information session or public open house meeting is required. When holding broader public meetings or open houses, the applicant must disclose the same project-specific information as it would to those involved in personal consultation and notification. However, information sessions or public open houses may not be a substitute for meeting consultation requirements. Contact the ERCB for advice on how to best proceed.

In situations where it is intended to test a proposed well by flaring or incinerating gas, the applicants should consider expanding the resident notification to the distances specified in *Directive 060: Upstream Petroleum Industry Flaring, Incinerating, and Venting for well test flaring*:

- 1.5 kilometres (km) for oil wells,
- 1.5 km for gas wells containing less than 10.0 moles per kilomole (mol/kmol) of hydrogen sulphide ( $H_2S$ ), and
- 3.0 km for gas wells where the gas contains greater than or equal to 10.0 mol/kmol  $H_2S$ .

## **2.2.2 What Information to Disclose**

- 13) Information packages must be developed and distributed to all parties included in the participant involvement program. Information packages are not required for consultation or notification with Alberta Sustainable Resource Development unless requested.

The ERCB public information documents include

- letter from the Chairman of the ERCB,

- the ERCB brochure *Understanding Oil and Gas Development in Alberta*,
- the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*,
- the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
- ERCB EnerFAQs publications that relate to the type of energy development proposed (i.e., facility, pipeline, or well).

14) The applicant's project-specific information package must provide the specific details of the proposed energy development.

15) The applicant must use appropriate language and terminology in the written materials so that the participants can clearly understand the details of the proposed development and the impact(s) it may have upon them.

16) The following details must be included in the applicant's project-specific information package:

- a) applicant name and contact numbers for further information,
- b) emergency contact number of the applicant/operator,
- c) location of proposed energy development,
- d) a description (category type) of the proposed energy development (e.g., well with no H<sub>2</sub>S, coalbed methane well, oil satellite with less than 1 tonne per day sulphur inlet),
- e) need for the proposed development and explanation of how it fits with existing and future plans,
- f) type of substance(s) that will be processed, transported, or drilled for,
- g) discussion of the presence of H<sub>2</sub>S and associated setbacks as detailed in *Interim Directive (ID) 97-06: Sour Well Licensing and Drilling Requirements and Tables 5.5, 6.3, and 7.5*,
- h) discussion of the potential restrictions regarding developing lands adjacent to the proposed development, such as setbacks (*OGCR 2.110 and Subdivision and Development Regulation, AR 43/2002, Sections 10 and 11*) (e.g., future surface improvements within 100 m of the wellhead may be subject to county/municipal development restrictions),
- i) description of proposed on-site equipment,
- j) a description of the continuous flaring, incinerating, and/or venting that meets the information requirements of *Directive 060*,
- k) potential sources of emissions and odours during normal operating conditions (including trucking operations) and measures to control or eliminate them,
- l) proposed project schedule for construction and start-up,
- m) anticipated noise level and description of proposed mitigative measures, if required,
- n) traffic impacts (types of vehicular traffic to be expected, duration, frequency, and dust control measures),

- o) the emergency planning zone (EPZ) (see *Directive 071: Emergency Preparedness and Response Requirements for the Upstream Petroleum Industry*),
  - p) derrick height in notification to private unregistered and unlighted airstrips when required, and
  - q) the list of available ERCB public information documents and their availability from the applicant:
    - brochure *Understanding Oil and Gas Development in Alberta*
    - all current ERCB EnerFAQs publications, as set out on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Public Zone : ERCB Process : Enerfaqs.

17) If any of the above project details are not applicable to the proposed energy development, the applicant's project-specific information letter must explain why the detail is not applicable.

18) The applicant is expected to include any other information that would assist the participant in understanding the proposed development (e.g., soil information, water well testing, maps).

### 2.2.3 Personal Information

Applicants are reminded of their obligations under the *Personal Information Protection Act (PIPA)*. That includes disclosing the need and purpose for collecting any personal information, the circumstances under which this information will be disclosed, and details regarding the security, retention, and ultimately the destruction of this information. The name of the person to be contacted regarding personal information collection and the company's privacy policy should also be provided, and all of these details should be consistent with the applicant's established privacy policy.

## 2.3 Implementing the Participant Involvement Program

19) The development and implementation of the participant involvement program must occur prior to the filing of an application with ERCB Facilities Applications. This includes

- the distribution of a project-specific information package and the ERCB public information documents,
- responding to questions and concerns,
- discussing options, alternatives, and mitigating measures, and
- seeking confirmation of nonobjection through cooperative efforts.

20) The applicant must always close the participant involvement loop, even if the application is withdrawn. This means that all parties included in the participant involvement program must continue to be included in all correspondence and information updates during the development, implementation, and outcome of the proposed project.

- a) If the scope of the project changes, such as a change to the surface location, the applicant must notify all parties included in the initial consultation program of the proposed change.

- i) If the project change results in the inclusion of new participants, the applicant must meet all participant involvement requirements in regard to the new participants as well.
- b) The applicant must advise all parties (public and industry) if it has decided not to proceed with the proposed project after having initiated a participant involvement program.
- c) The applicant must provide notification to all participants (public, industry, and regulatory) when a change in circumstances does not allow previous commitments to be met.

### 2.3.1 Personal Consultation and Confirmation of Nonobjection

Personal consultation is intended to inform parties of the nature and extent of the proposed application. Questions raised during the discussion of the proposed energy development should alert the applicant to potential concerns/objections. Through discussions, the applicant may be able to confirm nonobjection; if not, the applicant must file a nonroutine application.

- 21) The applicant must fulfill the requirements for the radius of personal consultation and confirmation of nonobjection set out in Tables 5.1, 6.1, 6.2, and 7.1. It is the applicant's responsibility to determine if the recommended radius needs to be expanded for the proposed development.
- 22) The applicant must conduct face-to-face visits or telephone conversations with all identified parties.
- 23) A company representative with full knowledge of the overall plans and direction of future development options must be available to answer questions either in person or by telephone.
- 24) The applicant must use appropriate language and terminology both in conversations and written materials so that the participants can clearly understand the details of the proposed development and the impact it may have upon them.
- 25) The applicant must provide information packages to those persons set out in Tables 5.1, 6.1, 6.2, and 7.1 and be prepared to discuss the project as necessary.
- 26) The applicant must provide the following information when personal consultation is required:
  - a) the applicant's project-specific information package,
  - b) the letter from the Chairman of the ERCB,
  - c) the ERCB brochure *Understanding Oil and Gas Development in Alberta*,
  - d) the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*, and
  - e) the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*.
- 27) The applicant must offer the participants copies of other ERCB EnerFAQs publications that relate to the proposed energy development and document its distribution for audit purposes.

- 28) The required information packages may be distributed during the personal consultation meeting or forwarded later as follow-up to the personal consultation phone call/meeting. Packages may be forwarded by courier, mail, fax, e-mail, or other means as agreed upon by the parties.
- 29) If the participant does not want a copy of the required information package(s), the applicant must document the refusal for audit purposes. The refusal of an information package does not require a nonroutine application to be submitted.
- 30) When confirmation of nonobjection is required, the applicant must ensure that there are no outstanding concerns/objections by obtaining written or verbal confirmation from the participant that they have no objection to the ERCB issuing a licence for the proposed energy development.
- 31) The applicant must keep a log of the dates that personal consultation and confirmation of nonobjection occurred, when materials were distributed/received, and to whom.
- 32) The applicant is accountable for the outcomes of personal consultation completed on its behalf by contracted personnel. Therefore, the applicant must ensure that individuals conducting personal consultation on its behalf
  - a) possess a sound understanding of regulatory requirements and expectations for participant involvement, and
  - b) use appropriate language and terminology in the written materials so that the participants can clearly understand the details of the proposed development and the impact it may have upon them.

### 2.3.2 Notification

Notification differs from personal consultation in that the initial communication may take place through written correspondence rather than face to face or in telephone conversations.

Determining that participants have received information packages will reduce the possibility of late (postapproval) concerns/objections and requests for review under the *Energy Resources Conservation Act*, Sections 39 or 40. Applicants may choose to use registered mail or courier to ensure that the participants receive the information packages or to document attempts made to involve the participants.

- 33) The applicant must fulfill the notification requirements for the radius of notification set out in Tables 5.1, 5.4, 6.1, 6.2, and 7.1. It is the applicant's responsibility to determine if the recommended radius of notification needs to be expanded for the proposed development.
  - Notification to Crown disposition holders within the proposed facility site, well site, access road, or pipeline right-of-way is required. The applicant may exclude Crown disposition holders such as oil and gas industry participants, provided that they are not impacted by setback requirements.
- 34) If the notified party indicates it would prefer personal consultation, a company representative with full knowledge of the overall plans and direction of future development options must be available to answer questions either in person or by telephone.

- 35) The applicant must use appropriate language and terminology in conversations and written materials so that the participants can clearly understand the details of the proposed development and the impact it may have upon them.
- 36) The applicant must provide a copy of its project-specific information package and the letter from the Chairman of the ERCB and offer the participants copies of
  - a) the ERCB brochure *Understanding Oil and Gas Development in Alberta*,
  - b) the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*,
  - c) the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
  - d) all current ERCB EnerFAQs publications as set out on the ERCB Web site.
- 37) The applicant must allow a minimum of 14 calendar days for the participants to receive, consider, and respond to the notification and be prepared to discuss the project as necessary before submitting an application. This applies to any project updates that may have been forwarded since the original package was distributed.
  - a) If the applicant has fulfilled the personal consultation and confirmation of nonobjection requirements in lieu of the notification requirements, the applicant may file the energy development application once it has completed personal consultation and acquired confirmation of nonobjection.
  - b) If the applicant is aware that an information package was not received by a required party, the applicant must file a nonroutine application and demonstrate its efforts to contact the party.
- 38) The applicant is accountable for the outcome of notification completed on its behalf by contracted personnel. Therefore, the applicant must ensure that individuals conducting notification on its behalf
  - a) possess a sound understanding of regulatory requirements and expectations for participant involvement, and
  - b) use appropriate language and terminology in the written materials so that the participants can clearly understand the details of the proposed development and the impact it may have upon them.

### **2.3.2.1 Extended Absences**

In some instances, landowners and residents who are part of the participant involvement program may be away for extended periods, such as on vacation, or they may reside out of the province.

- 39) When the applicant must personally consult with participants and is unable to do so, the applicant is expected to use courier or registered mail to send letters and information packages.
- 40) If the applicant is unable to fulfill all *Directive 056* participant involvement requirements, it must file a nonroutine application and demonstrate the efforts made to engage the participants.

### **2.3.3 Addressing Concerns/Objections and Appropriate Dispute Resolution**

*Directive 056* recommends that all applicants address and attempt to resolve outstanding concerns/objections prior to filing the application with ERCB Facilities Applications.

- 41) At any time during the planning, construction, and operation of a project, the applicant must attempt to address outstanding concerns/objections raised by potentially affected or interested parties
  - a) to reconcile differences where possible, and
  - b) to obtain confirmation of nonobjection.
- 42) The applicant must attempt to address all questions and concerns/objections regarding the proposed development prior to filing and during the review of the energy development application, regardless of whether the party involved is inside or outside the radius of Tables 5.1, 5.4, 6.1, 6.2, and 7.1.

To address outstanding concerns/objections, the applicant may choose to

- meet with objectors and attempt to resolve issues through informal “kitchen table” discussions,
- engage the ERCB Appropriate Dispute Resolution (ADR) program and contact the ERCB’s Facilitation Team to request staff facilitation,
- pursue resolution through a more formalized third-party mediation process, or
- request a Board disposition, such as a public hearing.

The participant involvement process is fully described in Appendix 11.

If the applicant pursues staff facilitation and the concerns/objections are subsequently resolved and confirmation of nonobjection is obtained where required, the applicant may file a routine application (see Section 3.8.1). However, if the application is nonroutine (see Section 3.8.2) for technical reasons or it is an ERCB-deemed nonroutine application, the applicant must file a nonroutine application.

- 43) If concerns/objections cannot be resolved through staff facilitation and the applicant intends to proceed with the project, the applicant must file a nonroutine application for reasons of participant involvement. The applicant may request an ERCB hearing in parallel with the ADR process.
- 44) When filing a nonroutine application for reasons of participant involvement, the applicant must include a written summary of the outstanding concerns/objections for ERCB review and consideration.

#### **2.3.3.1 Compensation**

Matters of compensation are not within the ERCB’s jurisdiction. If a surface rights agreement is unobtainable from the landowner solely due to compensation issues, the applicant may request that the ERCB issue the licence to allow the applicant to apply to the Surface Rights Board (SRB) for a right-of-entry order.

- 45) The applicant may file a routine licence application if the landowner confirms in writing that compensation is the only issue and there are no concerns/objections to the ERCB issuing a licence, so that the parties may proceed to the SRB.

- 46) If landowner confirmation as described above cannot be obtained, the applicant must file a nonroutine application.
- 47) The applicant must file a nonroutine application if there are unresolved compensation issues identified by participants other than the surface landowner.

#### **2.4 Documenting the Participant Involvement Program**

It is in the applicant's best interest to understand the audit requirements for participant involvement. The applicant should develop an audit documentation package early and build it throughout the process.

- 48) The applicant must retain communication logs, records of confirmation of nonobjection letters, and registered mail/courier tracking for audit purposes.
- 49) The applicant must retain personal consultation and notification documents for audit purposes.
- 50) The applicant must retain documentation of resolution of concerns/objections that occurred prior to filing an application.

Additional discussion related to documentation requirements are in Sections 5, 6, and 7.

#### **2.5 Expiry of the Personal Consultation and Notification Program**

All facility, pipeline, and well licences issued under *Directive 056* expire 1 year from date of issue if not acted on (i.e., if clearing or construction has not begun). If a licence expires, any associated personal consultation and notification also expires.

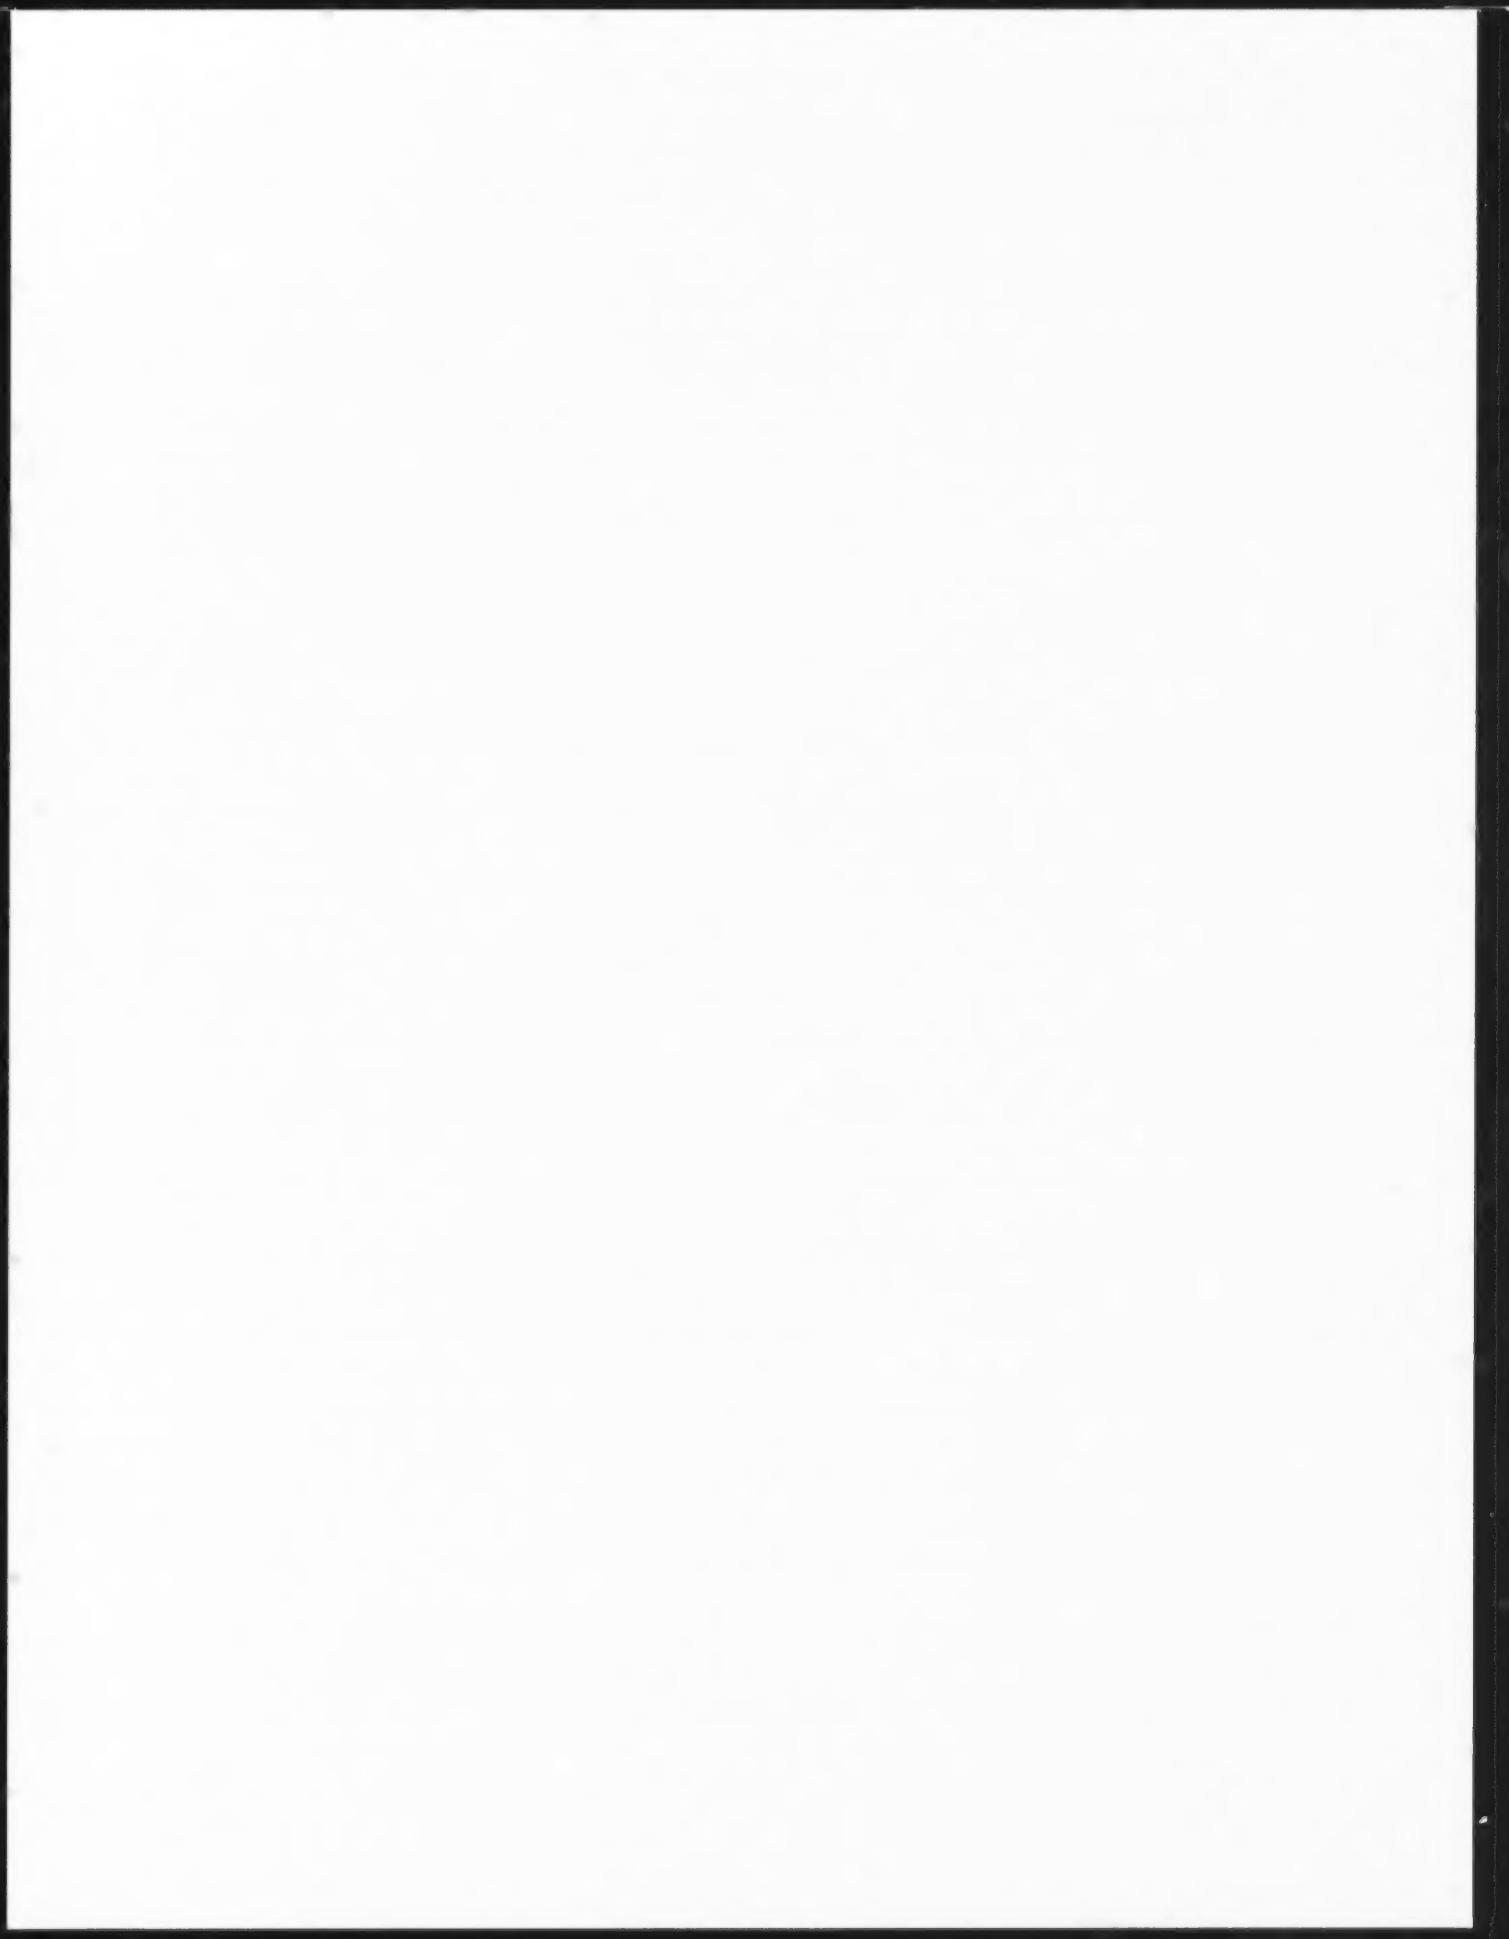

- 51) If a licence expires and the licensee intends to proceed with the project, the licensee must submit a new licence application to ERCB Facilities Applications and must consult again on the proposed project or be able to demonstrate that personal consultation and/or notification updates have been conducted.
- 52) A personal consultation and notification program is only valid for one energy development. Therefore, the applicant must initiate a new or updated personal consultation and notification program for additional applications and licence amendment applications.

In some instances the complexity of a project may have required that the personal consultation and notification be initiated well in advance of the licence application being submitted to Facilities Applications.

- 53) The participant involvement program must be current when the application is filed regardless of when the program was initiated.
- 54) If the personal consultation and notification program is initiated well in advance of the application submission date, the applicant is required to continue personal consultation and notification throughout the application process by providing participants with status updates on the proposed development. Project status updates must be provided if one year has elapsed since the initial consultation.

If the ERCB determines that the initial communication was incomplete or that the consultation is no longer current, the applicant may be directed to fulfill participant involvement requirements.

- 55) In cases where concerns/objections have been expressed, the applicant is expected to close the participant involvement loop by explaining the outcome of the application to those parties included in the participant involvement program. This should include what will be done next and an explanation of how the applicant will meet any commitments made during the participant involvement process, with an emphasis on ongoing information sharing.
- 56) The applicant must attempt to address concerns/objections and answer questions raised by members of the public, industry, government representatives, First Nations, Métis, and other interested parties throughout the life of a project.

## **Section 3 Energy Development Licence Applications (Schedule 1)**

### **3.1 Overview**

This section describes the energy development licensing application process.

All applicants have the responsibility to understand and comply with legislative and regulatory requirements. The ERCB continues to work with applicants new to the licensing process or experiencing difficulties.

Schedule 1 is required for all energy development applications processed through *Directive 056*, regardless of type or size of project. Each applicant must submit Schedule 1 as the cover schedule, along with the facility, pipeline, or well licence applications.

All energy development applications are filed based on category (letter) and type (number). There are four categories of energy developments, B through E, based on increasing sulphur inlet rates, H<sub>2</sub>S release volumes, and H<sub>2</sub>S release rates for the proposed facilities, pipelines, and wells. Each application category is subdivided into application types that are assigned a three-digit code.

Category designations also give an applicant the option of applying for multiple facilities, pipelines, and wells together as a project submission. A project is defined as a network of facilities, pipelines, and/or wells that connect to a common facility. A project submission may consist of a single licence application or of multiple licence applications of related facilities, pipelines, and wells. A project submission must be submitted under one applicant company name.

If an application is incomplete, the ERCB closes the file and advises the person identified as the Contact in writing of the reason for the closure. To reapply, the applicant must submit a new, complete licence application after having met all applicable requirements.

### **3.2 Considerations Prior to Filing a Licence Application**

There are many factors to consider prior to filing an energy development licence application (see Figure 3.1). For instance, have all mineral rights been secured? Are there outstanding concerns/objections to the licence application? Are licences/approvals required from other agencies?

*Numbered statements represent requirements and expectations (see Section 1.4).*

- 1) Prior to submitting an energy development licence application to ERCB Facilities Applications, the applicant must
  - a) retain documentation of contact with or approval from other parties, including those identified in Tables 5.1, 5.4, 6.1, 6.2, and 7.1, for ERCB audit purposes;
  - b) obtain an ERCB business associate (BA) code from the Petroleum Registry of Alberta (Section 3.2.1) and a licensee eligibility attribute from ERCB Corporate Compliance (see *Directive 067: Applying for Approval to Hold ERCB Licences*) – all applicants/consultants must have a BA code;

- c) retain documentation to support the applicant's participant involvement program (Section 2 and Tables 5.1, 5.4, 6.1, 6.2, and 7.1); and
- d) retain copies of all design work and other supporting documentation for the application as required.

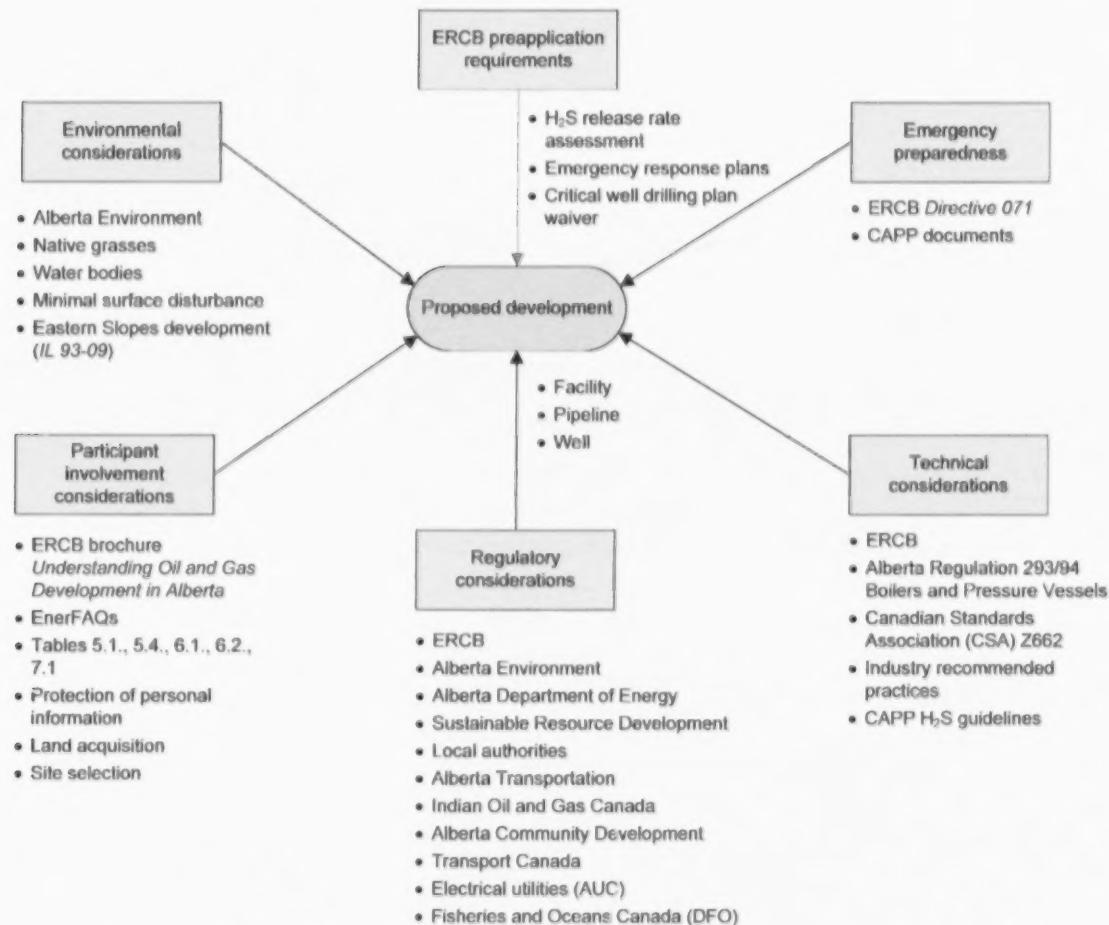

Figure 3.1. Considerations prior to filing a licence application

### 3.2.1 Business Associate Codes

BA codes, referred to as ERCB Identification or Operator Codes in Section 21(1) of the *Oil and Gas Conservation Act* (OGCA), are obtained from the Petroleum Registry of Alberta. The ERCB cannot consider a licence application unless the applicant and consultant each has a valid BA code and the applicant has obtained a licensee eligibility attribute from ERCB Liability Management (see *Directive 067*).

### 3.2.2 Prelicensing Approvals/Waivers

An applicant may seek a prelicensing ruling from the ERCB for the following components of a well licence application:

Prelicensing approvals/waivers	ERCB contact	Further information
H <sub>2</sub> S release rate assessment	Geology, Environmental Science & Economics Branch, Reserves and Pore-Space Management	<i>Directive 056</i> , Section 7.11.15
Critical well drilling plan waivers	Field Surveillance and Operations Branch, Well Operations	<i>ID 97-06 and Directive 036: Drilling Blowout Prevention Requirements and Procedures</i> IRP Volume 1: <i>Industry Recommended Practices for Drilling Critical Sour Wells</i>
Surface casing waiver	Field Surveillance and Operations Branch, Well Operations	<i>Directive 056</i> , Section 7.11.10 <i>Directive 008</i>

Other types of waivers for well, facility, and pipeline requirements (e.g., equipment spacing, measurement) are captured through the nonroutine licence application process (Section 3.8.2).

- 2) When filing an application that has a prelicensing approval/waiver for surface casing, the applicant must file a nonroutine application and include a copy of the approval/waiver issued.

### 3.3 Applicant Responsibilities

An applicant is responsible for all aspects of application development, including planning the energy development, planning and conducting participant involvement, retaining supporting documents, and submitting the application. Once a licence application is approved by the ERCB, the company becomes a licensee and bears responsibility for the construction, installation, and safe operation of the facility, pipeline, and/or well. The licensee is also responsible for decommissioning, dismantling, abandonment, and reclamation.

- 3) An applicant must obtain the appropriate ERCB licence(s) prior to commencing any site preparation, construction, or operation.

Applicants are not permitted to initiate prelease construction prior to acquiring an ERCB licence. Part 6, Sections 11 and 12 of the *Oil and Gas Conservation Act (OGCA)* and Part 4, Section 6 of the *Pipeline Act* prohibit any preparatory or incidental operations on private or public lands prior to the applicant receiving a well, facility, or pipeline licence or approval. This includes work such as access road construction, pipe stringing, bending, and welding, and facility equipment installation. Applicants must limit prelease activities to surveying and obtaining soil samples through shovel digs or auger samples no more than 5 to 8 centimetres (cm) in diameter.

- 4) The applicant/licensee is responsible for outcomes of actions conducted on its behalf by contracted personnel.
- 5) The applicant/licensee is expected to maintain an ongoing dialogue with members of the participant involvement program during the life of the project.

### **3.4 Submission Procedures**

The ERCB accepts electronic submissions for well licence applications, surface facility applications, pipeline/pipeline installation applications, and oilfield waste management facility applications through the ERCB's Electronic Applications Submission (EAS) system.

- 6) Well, facility, and pipeline audit submissions must be submitted electronically to [BOS.Admin@ercb.ca](mailto:BOS.Admin@ercb.ca).

Copies of all schedules that apply to energy development applications are in the applicable sections of *Directive 056*.

- 7) For data retention purposes, the applicant must ensure that schedules are printed on one side only.

### **3.5 Licence Amendments**

A licence amendment application is a change to a current licence. This includes the correction of inadvertent data errors and number transpositions. Additional details for licence amendments for each licence application type are in Sections 5, 6, and 7.

There is now a self-disclosure process available to licensees when pipeline/pipeline installation and facility licence details are incorrectly identified on the licence or if a company wishes to disclose an existing unlicensed facility or pipeline/pipeline installation (see Section 3.9).

### **3.6 Incomplete Licence Applications**

The ERCB cannot process an incomplete licence application. If an application has minor deficiencies, staff may notify the applicant and request that corrections be submitted within two business days. For applications submitted through EAS, the application will be closed and the applicant will be required to submit a replacement application if it intends to proceed with the project.

In the case of significant deficiencies, ERCB Facilities Applications will notify the applicant in writing that the application is being closed and the reason for the closure. Closed applications are not returned to the applicant. The applicant may reapply by submitting a new, complete, and accurate energy development licence application to Facilities Applications.

- 8) Prior to reapplying, the applicant must assess the need to update its participant involvement program if a delay in filing or potential changes to the scope of the energy development require participant updates.

Significant deficiencies include situations where the applicant

- has not included supplementary information to support a nonroutine submission,

- has not answered an applicable question on a schedule,
- fails to respond to an ERCB request for additional information within the specified time,
- has submitted its application on vendor forms that do not match ERCB format and content,
- failed to submit all required schedules or attachments,
- has recorded three or more errors on a schedule, or
- has filed an application for an invalid category type.

If the applicant designates a consultant to prepare and file an application on its behalf, Facilities Applications staff may communicate with the consultant during the processing of the application.

### **3.7 Checking the Status of a Licence Application**

An applicant may review the status of its licence application by accessing the Integrated Application Registry (IAR) on the ERCB Web site. IAR has an on-line help system to assist users in checking the status of a licence application.

### **3.8 ERCB Application Licensing Process**

A licence issued under *Directive 056* is a licence to construct and operate a surface facility, pipeline, or well.

After Facilities Applications receives and registers an application, staff perform numerous electronic checks that determine the application's acceptability and the path for processing. This may include a preliminary technical screening that helps to identify issues that require further assessment.

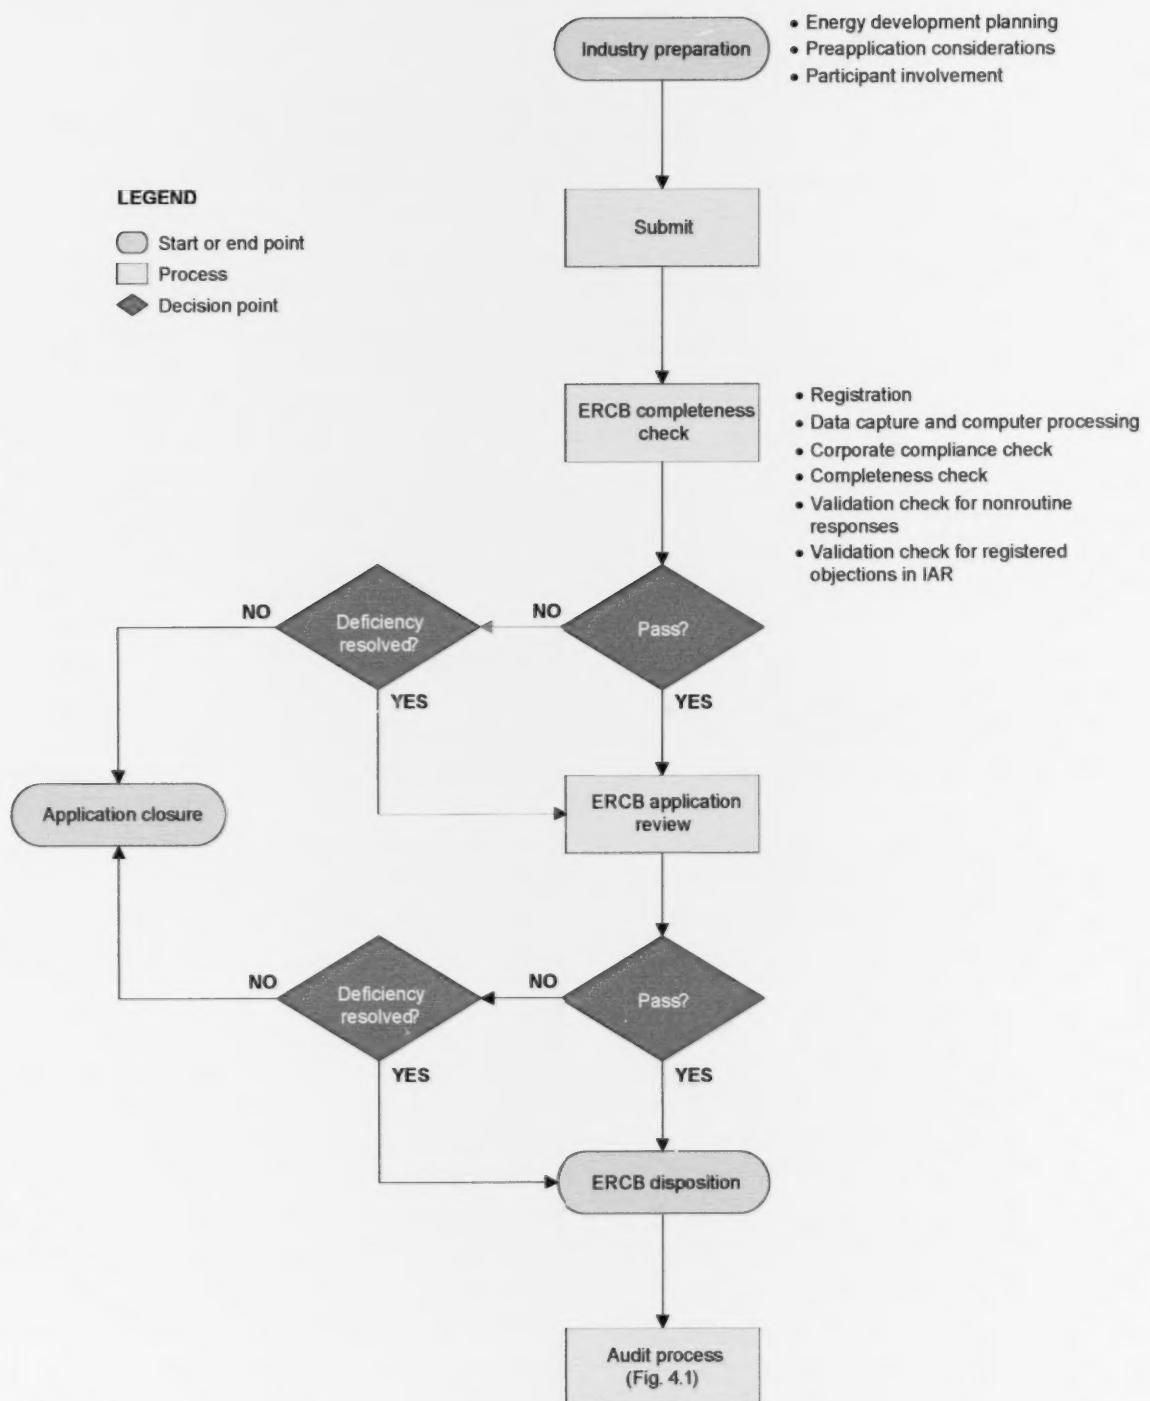

All licence applications are submitted as either routine or nonroutine. An applicant chooses the type of application submission based on the responses entered on schedules. Responses on the schedules that are highlighted in bold type indicate that the applicant is filing a nonroutine application. Nonroutine applications are classified as either self-identified nonroutine or ERCB-designated nonroutine. Nonroutine licence applications are further designated as participant involvement nonroutine or technical nonroutine.

Some applications may be set down for a hearing before a Board-appointed panel. For information on the ERCB's hearing process, see *Directive 029: Energy and Utility Development Applications and the Hearing Process*.

#### **3.8.1 Routine Applications**

Figure 3.2 shows ERCB Facilities Applications' routine application licensing process. An applicant files a routine application when

- supporting documentation demonstrates compliance with all technical and participant involvement requirements,
- there are no outstanding concerns/objections,
- the landowner agrees (in writing) to proceed to the Surface Rights Board, or
- a relaxation from regulatory requirements is not requested.

**Figure 3.2. Routine licence application process**

Supporting documentation is not required to be submitted with routine licence applications. However, this documentation will be required if the application is selected for an audit review. Routine applications are registered with ERCB Facilities Applications and entered into a database, through EAS or manually, to verify schedule data and ensure completeness and appropriate response. Schedules and attachments (including survey plans, process flow diagrams, and base maps) are manually reviewed for internal consistency and adherence to requirements, such as setbacks, survey data, and location of residents. Deficient applications are handled in accordance with Section 3.6.

Based on this review, a recommendation on the disposition of the application is made to an authorized ERCB signing designate, who further reviews each application before granting a licence.

### **3.8.2 Nonroutine Applications**

Figure 3.3 shows Facilities Applications' nonroutine application licensing process. An application is considered nonroutine if the applicant cannot meet an ERCB requirement, chooses to apply for a relaxation from an ERCB requirement, or has been directed to file a nonroutine application by Facilities Applications.

- 9) All nonroutine applications must include the required documentation (see Sections 5.14, 6.12, and 7.14), an explanation of why the requirement will not be met, and alternative measures proposed to warrant relaxation of the requirement.

There are three types of nonroutine applications:

- Nonroutine—Participant Involvement
- Nonroutine—Technical
- Nonroutine—ERCB Designated

#### **3.8.2.1 Nonroutine—Participant Involvement**

- 10) The applicant must file a nonroutine licence application for reasons of participant involvement if
  - a) public/industry consultation and notification requirements are not met,
  - b) outstanding concerns/objections, whether inside or outside the distances outlined in Tables 5.1, 5.4, 6.1, 6.2, and 7.1 were received by the applicant during the participant involvement program or anytime prior to filing and remain unresolved, or
  - c) the applicant is unable to obtain written confirmation from the landowner that the only outstanding concern is compensation.

#### **3.8.2.2 Nonroutine—Technical**

- 11) The applicant must file a nonroutine licence application for technical reasons if
  - a) technical requirements are not met,
  - b) a variance from regulatory requirements is requested, or
  - c) the use of an unspecified method, process, or material is proposed.

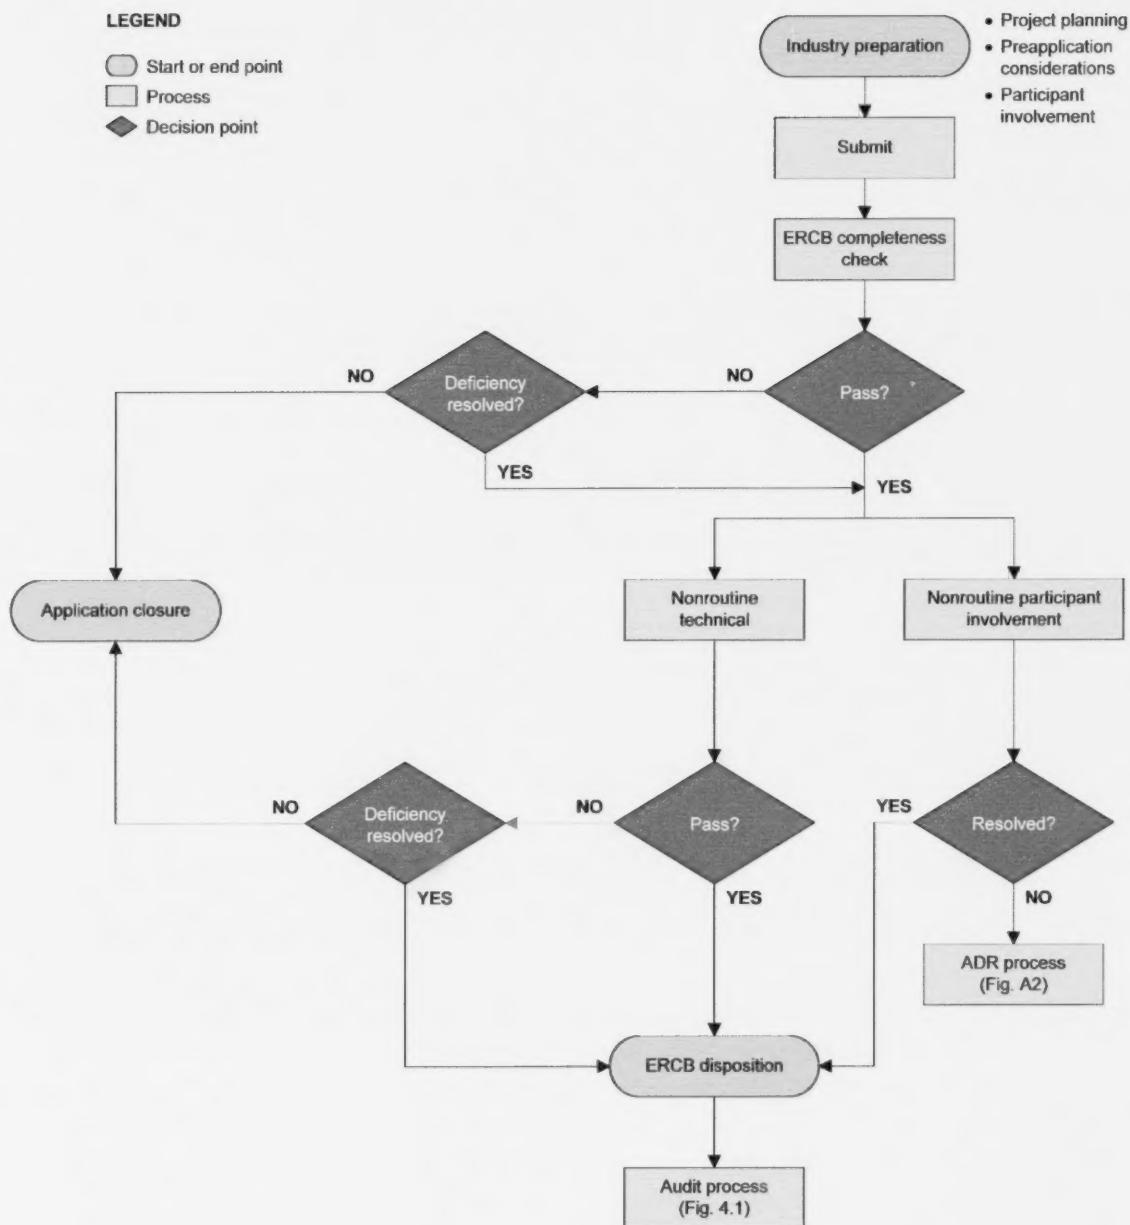

Figure 3.3. Nonroutine licence application process

### **3.8.2.3 Nonroutine—ERCB Designated**

12) The applicant must file a nonroutine licence application if

- a) so directed by the ERCB prior to submission,
- b) outstanding concerns/objections exist for an energy development proposal that does not require a licence under *Directive 056* (see Sections 5.5, 6.5, and 7.6), or
- c) the application is for
  - i) Category E facilities and wells, or
  - ii) new Category C and D gas processing plants

Furthermore, the ERCB may designate any routine licence application nonroutine if the application

- contains inconsistent technical information,
- has associated unresolved concerns/objections,
- is part of a project application proceeding to a hearing,
- involves sensitive geographic/environmental areas,
- is the first petroleum or industrial activity into an area, or
- is filed by a company with a “REFER” status.

If this occurs, the applicant is advised, given the reasons for the nonroutine designation, and directed to address the issues. If the application was submitted routinely through the EAS system, the application will be closed and the applicant will be required to resubmit the application as nonroutine if it intends to proceed with the project.

### **3.9 Voluntary Self-Disclosure**

As stated in *Directive 019: Compliance Assurance*, the ERCB’s self-disclosure policy is intended to encourage licensees to proactively identify, report, and correct noncompliance. The Facilities Applications group has formalized a self-disclosure process on Schedule 1 in *Directive 056*, which provides applicants the opportunity to disclose incorrect facility or pipeline/pipeline installation licence details. This process may also be used where a company wishes to disclose an existing unlicensed facility or pipeline/pipeline installation and submit an application for the required licence. These types of applications will be considered routine except where a nonroutine issue as defined in Sections 3.8.2.2 and/or 3.8.2.3 is associated with the application.

New licence or licence amendment applications that do not involve a self-disclosure, may not be submitted under the same Schedule 1 with a self-disclosure application. An application to change licence details is considered a licence amendment application. An application for a previously unlicensed facility or pipeline/pipeline installation is considered to be an application for a new facility or for new pipeline/pipeline installation construction.

13) If a self-disclosure from a company requires a new facility or pipeline/pipeline installation licence to address the matter, a letter must be submitted with the associated application. The letter must include the following:

- details regarding the background and nature of the licensing issue,

- an explanation as to why the facility or pipeline was not licensed or licensed incorrectly, and
- a statement disclosing whether the company has received concerns or objections regarding the existing operations.

14) If a self-disclosure from a company requires an amendment to an existing facility or pipeline/pipeline installation licence to address the matter, a letter must be submitted with the associated application. The letter must include the following:

- an explanation of the need for the amendment and supporting details, and
- a statement disclosing whether the company has received concerns or objections regarding operations pertaining to the amendment.

Applicants may submit multiple self-disclosure applications under a single Schedule 1 for this process, and if circumstances are similar for all the applications, one letter of explanation is acceptable.

### **3.9.1 Self-Disclosure Applications and Participant Involvement Requirements**

The self-disclosure process provides applicants the opportunity to disclose incorrect pipeline and facility licence details and to disclose and acquire licences for existing unlicensed facilities and pipelines/pipeline installations. This process must not be used to identify any participant involvement oversights related to an application. Applicants that have identified a participant involvement failure after application submission must contact the Facilities Applications Audit section directly to self-disclose participant involvement issues and obtain direction on how to proceed.

Self-disclosure applications for facilities or pipeline/pipeline installations that have been in existence and operating for several years without public concerns may not be required to fulfill all participant involvement requirements. Applicants should contact the Facilities Application Audit section for advice on how to proceed with the required application.

If there is no evidence that an initial participant involvement program was conducted prior to the construction of the facility or pipeline/pipeline installation, the applicant must indicate on the application schedules (Schedule 2 or Schedule 3) that public and/or industry consultation and notification requirements have not been met. If there is evidence that participant involvement work was completed prior to construction, the facility or pipeline/pipeline installation application may be submitted routinely. The applicant must keep the details of the participant involvement documentation on file and available should the file be selected for audit.

### **3.9.2 Self-Disclosure Application Processing Time**

Applications submitted through this process are subject to the same processing procedures and validation checks as other applications and are required to meet standard application requirements. If the application is deficient, the applicant will be contacted and required to resubmit the application (see Section 3.6). Additional action may be taken by the ERCB to ensure that the licensing issue is resolved once it has been disclosed through this process.

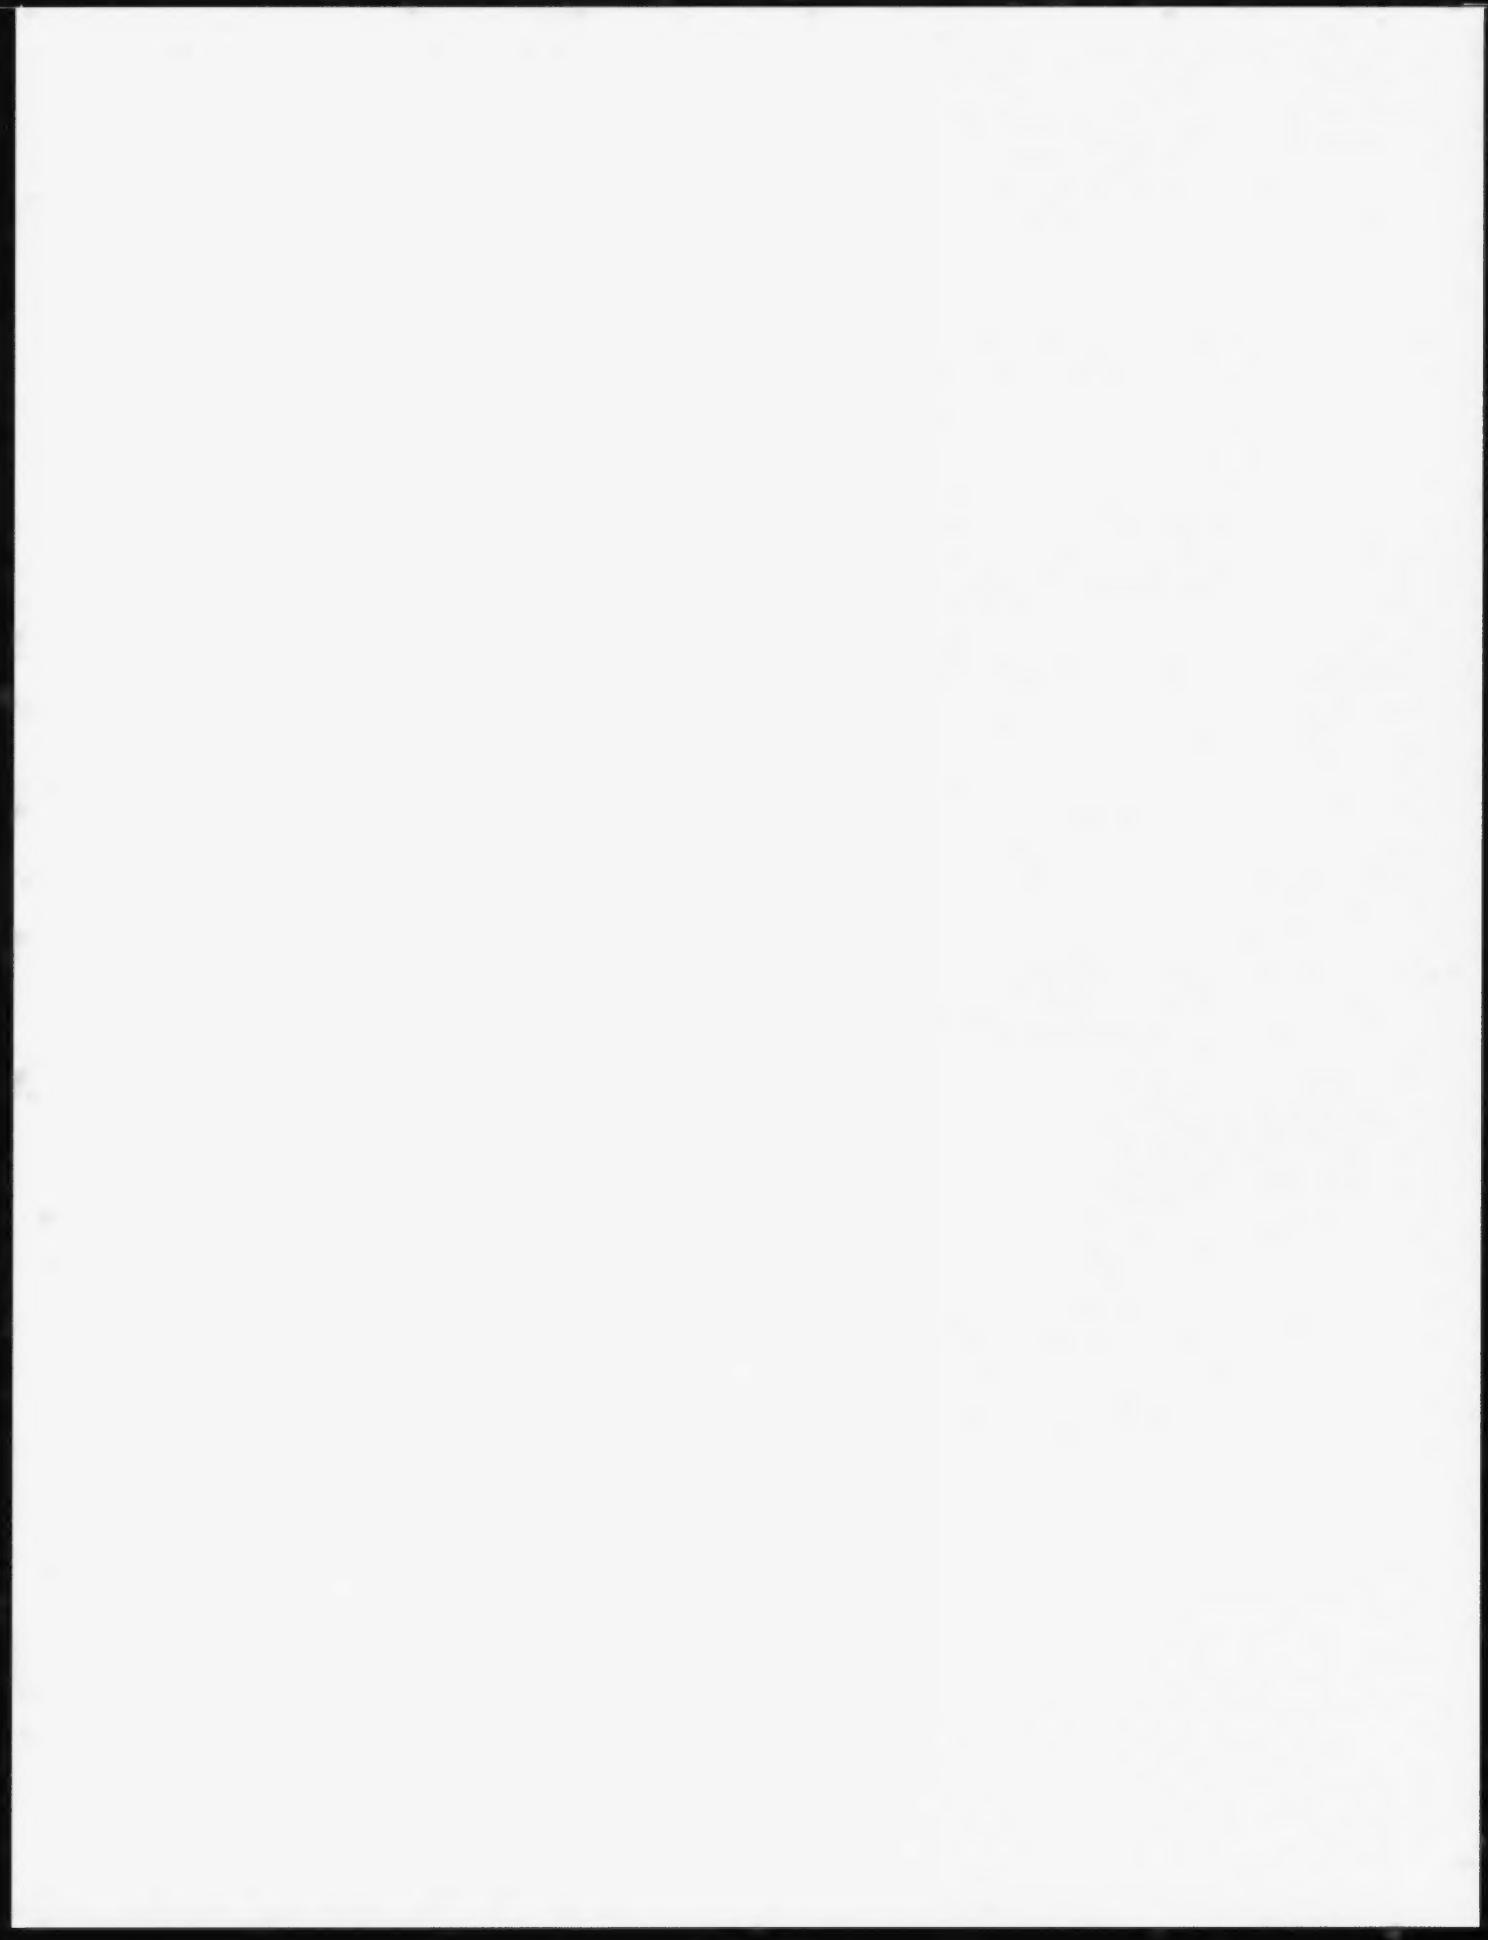

### **3.9.3 Self-Disclosure Application for Well Licences**

Well licence issues must not be disclosed through this process. Self-disclosure of well licensing issues must be directed to the Facilities Application Audit section for consideration and direction on how to proceed.

### **3.10 Application Disposition**

The disposition of an application may occur through the application licensing process, as a result of a Board hearing, or because of the applicant's decision not to proceed with the energy development. Application disposition includes

- issuance of a licence by the ERCB,
- denial of a licence by the ERCB,
- closure of an application by the ERCB, and
- withdrawal of an application by the applicant.

# Directive 056 – Schedule 1

## Applicant General Information

DAY      MONTH      YEAR

APPLICANT'S REFERENCE

The applicant certifies that the information here and in all supporting documentation is correct and that the facility, pipeline, pipeline installation, or well will be drilled, constructed, operated, amended, and abandoned in accordance with all regulatory requirements or as directed by the Energy Resources Conservation Board.

### **3.11 How to Complete Schedule 1: Applicant General Information**

<b>Date</b>	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
<b>Applicant's Reference</b>	Enter your own file reference in the designated area (optional). You must enter the Alternate Reference, GDEHY, for facility applications with glycol dehydrators included in the design.

---

#### **Step 1: Applicant Information**

---

<b>Applicant Name</b>	Enter the full corporate name of the applicant associated with the business associate (BA) code.
<b>Applicant BA Code</b>	Enter the 4-digit BA code issued to your company.
<b>Company Contact</b>	Enter the name of the person authorized by your company to be responsible for the application.  By authorizing the contact person to act on your company's behalf, the actions and decisions of this individual will be considered by the ERCB to be the actions and decisions of your company.
<b>Telephone/Fax/ E-mail Address</b>	Enter the telephone number, fax number, and e-mail address of the contact person, including area codes where applicable.
<b>Consultant Name</b>	Enter the company name of the consultant submitting the application on your company's behalf.  Although authorized by the applicant and acting on its behalf, consultants must also provide the full name, business telephone number, fax number and, if possible, e-mail address of the applicant's/company's contact person.
<b>Consultant BA Code</b>	Enter the 4-digit BA code issued to the consultant company by the ERCB.
<b>Consultant Contact</b>	Enter the name of the person at the consulting company be responsible for the application.
<b>Telephone/Fax/ E-mail Address</b>	Enter the telephone number, fax number, and e-mail address of the contact person at the consulting company, including area codes where applicable.

---

#### **Step 2: Application Type**

---

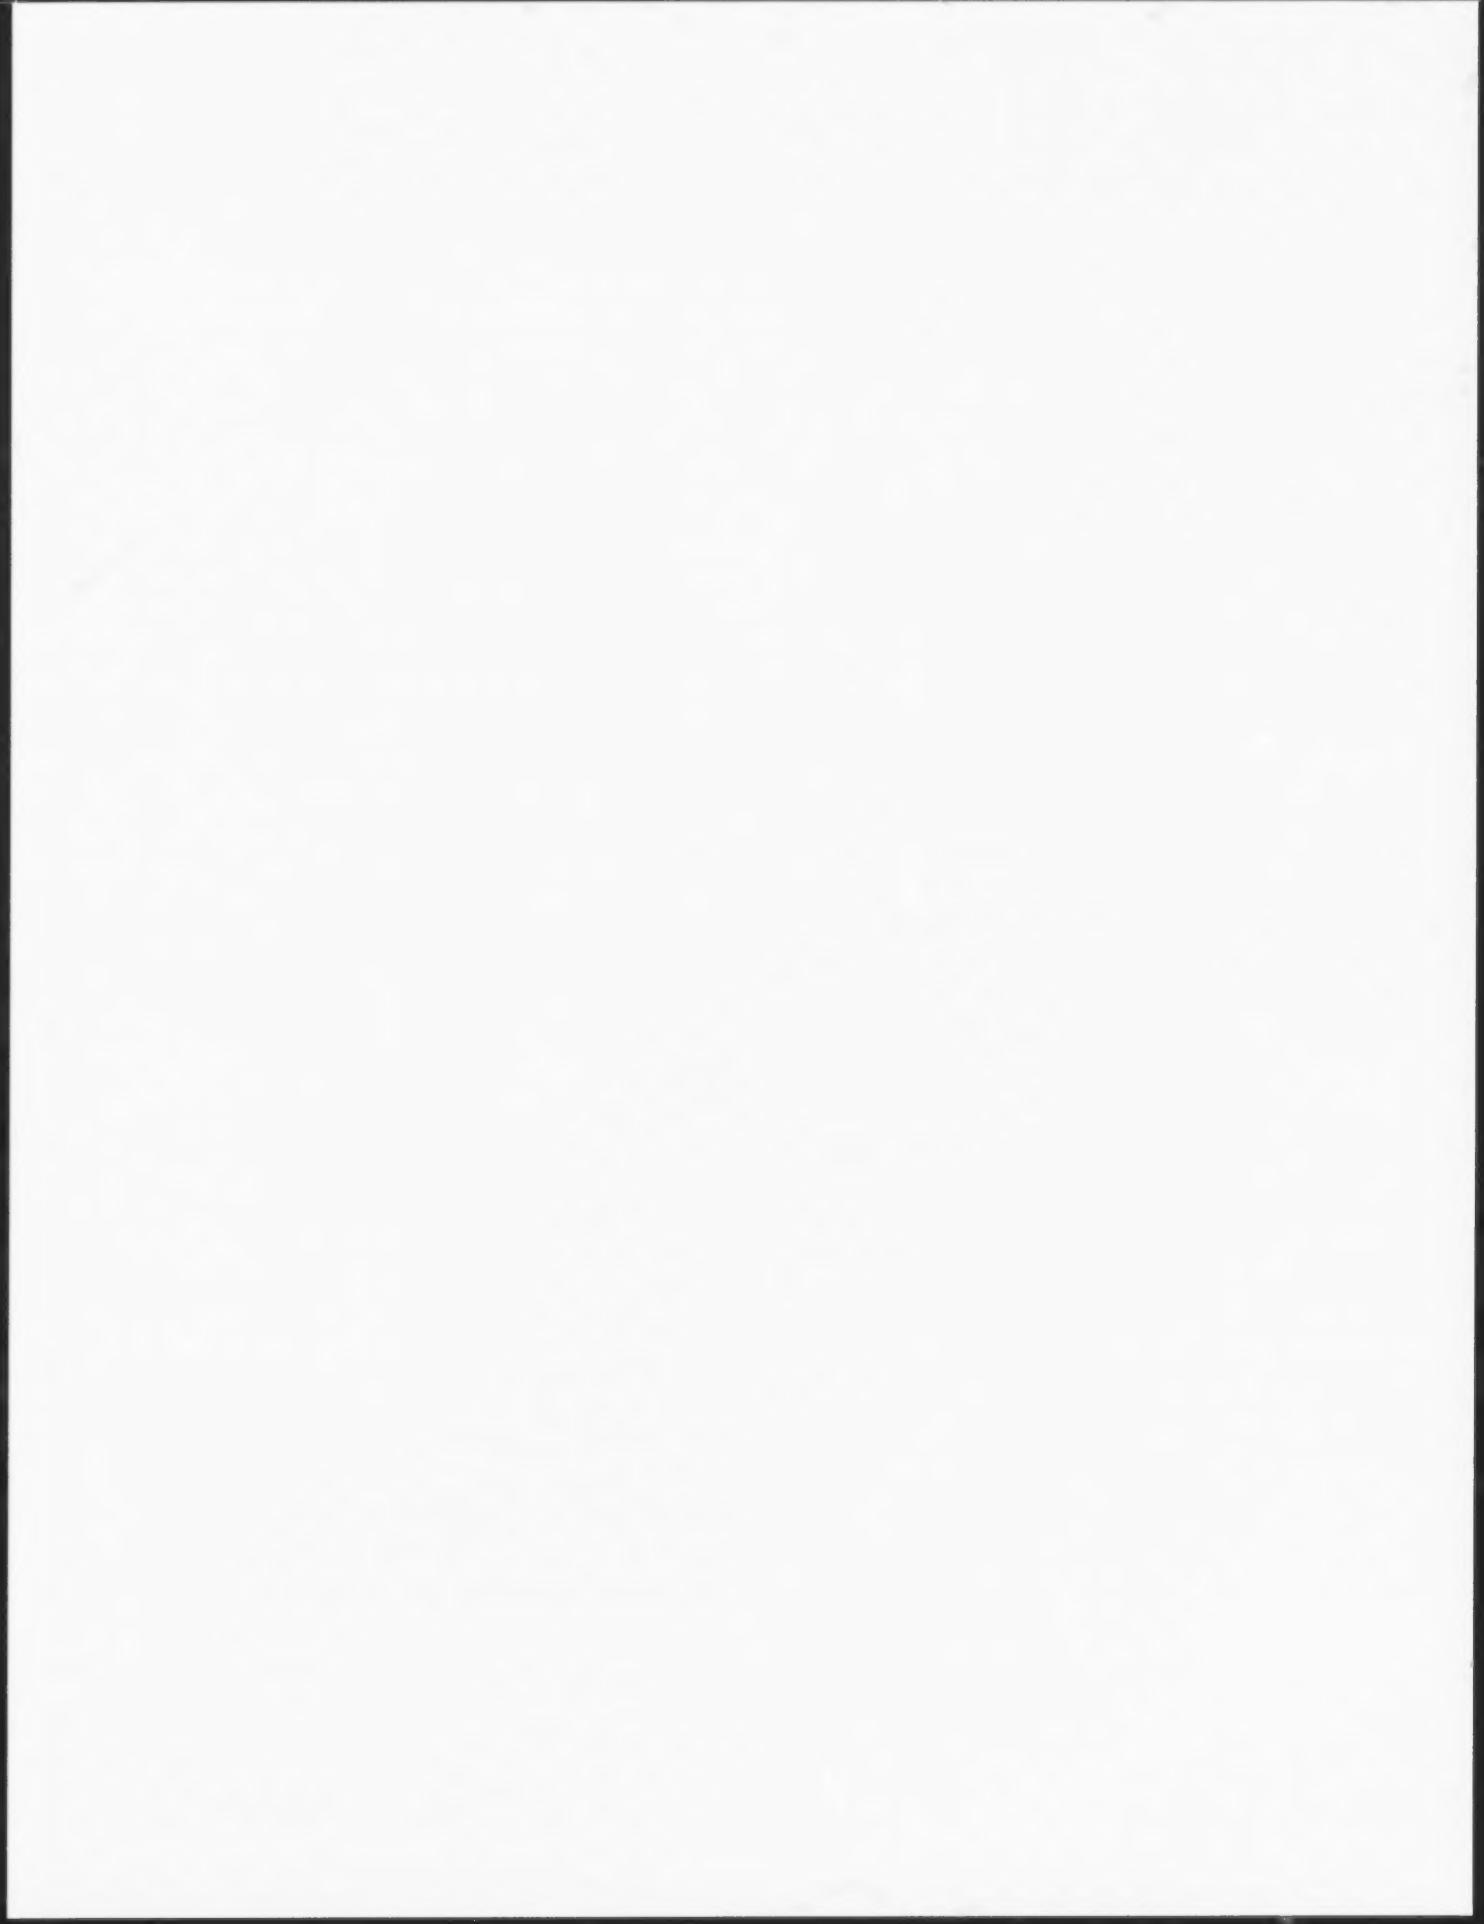

<b>Facility(s)/Pipeline(s)/ Pipeline Installation(s)/ Well(s)</b>	Check all boxes that apply to the type of application you are submitting.
<b>Self-Disclosure</b>	Check this box if this is a self-disclosure application for facility, pipeline, or pipeline installation. If selected, you must attach a letter of explanation describing the background and nature of the licensing issue (see Section 3.9).

---

#### **Step 3: Completeness Check**

---

Enter the number of schedules, diagrams, maps, and survey plans attached to your application in the designated areas.

## Section 4 Application Audit Process

### 4.1 Overview

The ERCB provides the energy industry with requirements and expectations to assist the applicant/licencsee both in advance of submitting an application for energy development and throughout the life of a project. Applicants are responsible to meet the requirements outlined in *Directive 056*. Compliance with these requirements will be judged based on the representations that an applicant makes from the time that an application is submitted through to the time disposition of the application by the ERCB occurs. The purpose of the Facilities Applications' audit process is to ensure industry's regulatory compliance and to identify areas for continuous improvement.

The audit process (Figure 4.1) applies to both routine and nonroutine applications (Section 3.8.2). ERCB Facilities Applications conducts audits as part of a

- prelicensing review, based on application category type (e.g., Category E facilities and wells), if there are outstanding concerns/objections to determine if an environmental, safety, or compliance risk exists or if Facilities Applications believes an audit is otherwise appropriate, or
- postlicensing review, which requires the applicant to demonstrate how it met and planned for regulatory requirements as set out by the ERCB prior to filing the energy development licence application.

In either case, a defined set of documents is submitted to ERCB Facilities Applications for review in order to demonstrate that regulatory requirements as set out in *Directive 056* have been fulfilled.

The results of application audits are used to

- identify regulatory noncompliances,
- provide industry with feedback regarding compliant applications and/or areas for future improvement in application submissions,
- measure the effectiveness of the application process and provide benchmarks for future improvements,
- advise industry of updates to the application process between *Directive 056* revisions, and
- aid regulatory reform and the determination of requirements.

If applications are found to be noncompliant, ERCB Facilities Applications will initiate appropriate enforcement action (see ERCB Web site at [www.ercb.ca](http://www.ercb.ca) for further enforcement details). While enforcement action primarily occurs during postlicensing reviews, there are instances when enforcement action is warranted prior to the issuance of a licence (e.g., initiating lease construction without a well licence in place).

When conducting an audit, the ERCB relies upon the representations made by the applicant/licencsee and documents submitted by the applicant/licencsee. The ERCB does not verify legal or beneficial title. The issuance of a licence or conducting of an ERCB audit is not to be relied upon by the licensee or third parties as a legal determination or confirmation of entitlement. Audits are conducted for ERCB internal purposes only.

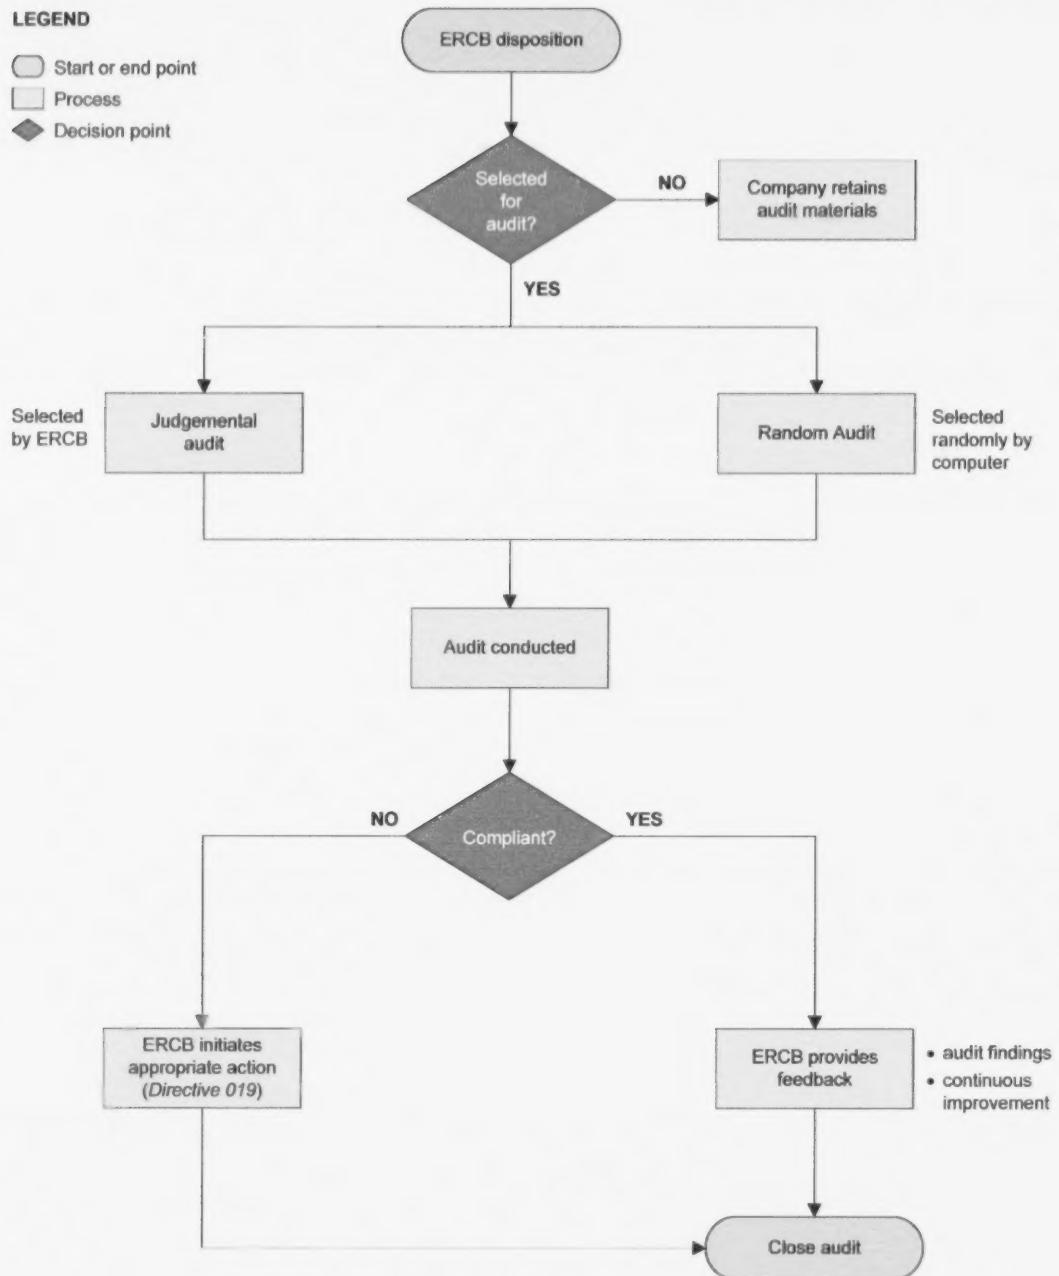

Figure 4.1. Facilities Applications' audit process

#### 4.2 Audit Selection

All routine and nonroutine applications are potential audit candidates. An application may be randomly selected by computer or judgementally selected by ERCB Facilities Applications based on factors such as category type, public risk, location, and recent applicant compliance history.

#### **4.2.1 Full or Partial Audit Review**

ERCB Facilities Applications may select an application for a postlicensing audit review and may undertake a full or partial audit of the supporting material.

**Numbered statements represent requirements and expectations (see Section 1.4).**

- 1) When subject to a full audit, the licensee must submit all supporting documentation associated with the application. The licensee must provide additional information to support the audit upon ERCB request.
- 2) When subject to a partial audit, the licensee must submit audit materials as requested by Facilities Applications to demonstrate compliance with the portion of the application under review.

#### **4.2.2 Immediate Audit**

Facilities Applications normally allows 14 calendar days for a licensee to submit the requested audit documentation. However, in certain instances Facilities Applications may proceed to an immediate audit and request the materials in support of the audit (e.g., if participant involvement, mineral rights, or wellbore rights are in question).

- 3) If an immediate audit is conducted, the applicant/licensee must submit the requested audit material within the time set by Facilities Applications. This is usually within the same day, but Facilities Applications may require the information within hours.

#### **4.2.3 Prelicensing Audit Reviews**

In a prelicensing audit review, Facilities Applications reviews all or part of the audit materials before a disposition of the application occurs.

- 4) The applicant must submit audit materials for prelicensing review if the
  - a) application is for a new Category C and D gas plant or any Category E energy development,
  - b) application is being considered by the ERCB Board,
  - c) potential for an environmental, safety, or compliance risk exists, or
  - d) ERCB believes it is otherwise appropriate.

#### **4.2.4 Link to ERCB Field Surveillance Inspections**

Based on the findings of an application audit review, Facilities Applications staff may refer an application to the Field Surveillance Branch for a field inspection to confirm that the materials, operations, and commitments match those indicated in the application.

### **4.3 Audit Documentation**

An applicant must retain copies of all applications and supporting data in the event of an audit. Refer to Sections 5.10, 5.11, 5.12, 5.13, 6.10, 6.11, 7.12, and 7.13 for a list of the required audit documentation for facility, pipeline, and well applications respectively.

- 5) The applicant must retain on file all records and audit documentation relating to an application for one year from the date of issue of the corresponding licence.

The ERCB recommends that all records and audit documentation be kept on file for the life of the project, since exceptional circumstances may require that a review be conducted later in the life of the project.

- 6) The documentation must demonstrate that the supporting materials were developed and compiled during the project planning stage prior to filing the licence application.
- 7) The applicant must submit the required documentation to Facilities Applications within 14 calendar days of a request or as directed by Facilities Applications.

#### **4.4 Compliance and Enforcement**

Regulatory requirements are those rules that industry has an obligation to meet and against which the ERCB may take enforcement action in cases of noncompliance. For the purpose of *Directive 056*, noncompliance events are listed in Table 4.1. Refer to the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Compliance and Enforcement for details regarding ERCB compliance and enforcement and see *Directive 019: Compliance Assurance*.

##### **4.4.1 Voluntary Self-Disclosure**

At any time during the life of a project, an applicant/licensee that identifies a noncompliance with ERCB requirements may voluntarily disclose the noncompliance to Facilities Applications; also see *Directive 019* for details regarding voluntary self-disclosure.

If a licensee meets the criteria for voluntary self-disclosure, there will be no enforcement action. Facilities Applications may require the licensee to complete a self-audit of previous *Directive 056* applications. The licensee may be required to conduct a review of its internal application/audit processes to ensure that the unsatisfactory event is not a recurring issue or the result of a systemic licensing process failure.

*Directive 019* came into effect on January 1, 2006. Consequently, the noncompliance events noted in Table 4.1 have been risk assessed and now are located on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Compliance and Enforcement : Risk Assessed Noncompliance. The ERCB will periodically review its risked noncompliances and make revisions to ensure fairness and consistency throughout the compliance categories. Additional information regarding ERCB Compliance and Enforcement can be found at [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Compliance and Enforcement.

**Table 4.1. Consequences for unsatisfactory events**

Risked consequence	Noncompliance events
<b>PARTICIPANT INVOLVEMENT</b>	
High	Failure to disclose to the ERCB any outstanding public/industry concerns/objections, whether they are received prior to or after filing of the application or whether the party is inside or outside the contact radius of personal consultation and notification.
High	No attempt at public and/or industry personal consultation and notification prior to filing the application.
High	Incomplete public and/or industry personal consultation and notification prior to filing the application.
Low	Failure to provide the required ERCB information packages prior to filing the application.
High	Failure to provide the required project-specific information package prior to filing the application.
Low	Failure to provide all required minimum information details in the project-specific information package prior to filing the application.
Low	Failure to obtain consent from the surface improvement owner prior to filing the application.
Low	Failure to meet the coal notification requirements prior to filing the application.
High	Failure to meet the airport notification requirements prior to filing the application.
High	Filing the application before expiry of the 14-calendar-day notification period.
Low	Failure to submit the requested audit documentation.
<b>FACILITIES—TECHNICAL</b>	
High	Failure to acquire the necessary facility licence prior to commencing site preparation, construction, and/or operation.
Low	Filing an application when the applicant is not a working interest participant.
Low	Failure to file a licence amendment application when required.
High	Failure to file a licence amendment application when required that results in a higher category/type.
Low	Failure to apply for the correct category/type of facility.
High	Failure to meet the spacing requirements in the facility design.
High	Failure to obtain approval from Alberta Culture and Community Spirit for sites with Historic Resource Value of 1, 2, or 3 prior to filing the application.
Low	Failure to notify Alberta Culture and Community Spirit for sites with a Historic Resource Value of 4 and 5 prior to filing application .
High	Not completing an acceptable noise impact assessment prior to application.
High	Not meeting the permissible sound levels at the nearest or most impacted residence.
High	Not including a vapour recovery unit in the facility design when required.
High	Designing/constructing a facility with storage systems that have no secondary containment as required by <i>Directive 055</i> .
Low	Designing/constructing a facility with storage systems that do not meet the applicable Low Risk requirements of <i>Directive 055</i> .
High	Failure to submit a facility licence application as "facilities-technical nonroutine" when required.
Low	Failure to meet process flow diagram requirements.
Low	Failure to submit the requested audit documentation.
<b>PIPELINES/PIPELINE INSTALLATIONS—TECHNICAL</b>	
High	Failure to acquire the necessary pipeline/pipeline installation licence prior to commencing right-of-way or site preparation, construction, and operation.
Low	Failure to apply for the correct category/type of pipeline/pipeline installation.
High	Failure to file a licence amendment application to reflect a change in the pipeline parameters that results in a higher category/type or higher level designation.
Low	Failure to file a licence amendment application to reflect a change in the pipeline parameters that does not result in a higher category/type or higher level designation.
High	Failure to design for the correct stress level.
Low	Connecting pipelines with different MOPs and not having the appropriate pressure control devices in place.
High	Failure to design for sour service where required.
High	Valves, flanges, fittings not suitable for the applied for MOP as defined by the Canadian Standards Association (CSA).

(continued)

**Table 4.1. Consequences for noncompliance events (continued)**

Risk consequence	Noncompliance events
High	The substance of the connecting pipeline is not compatible with the proposed substance.
High	Designing the pipeline to transport a corrosive substance without including proper internal corrosion measures.
Low	Failure to obtain consent from Alberta Infrastructure prior to filing the application.
Low	Failure to meet Alberta Environment requirements prior to filing the application.
High	Failure to provide a correct pipeline H <sub>2</sub> S release volume calculation that results in a higher level designation.
Low	Failure to provide a correct pipeline H <sub>2</sub> S release volume calculation that results in no change to the level designation.
High	Failure to submit a pipeline/pipeline installation licence application as "pipelines/pipeline installations-technical nonroutine" when required.
High	Not completing an acceptable noise impact assessment prior to application.
High	Not meeting the permissible sound levels at the nearest or most impacted residence.
Low	Failure to meet the spacing requirements in the facility design.
High	Designing/constructing a facility with storage systems that have no secondary containment as required by <i>Directive 055</i> .
Low	Designing/constructing a facility with storage systems that do not meet the applicable Low Risk requirements of <i>Directive 055</i> .
Low	Failure to meet process flow diagram requirements.
Low	Failure to submit the requested audit documentation.
<b>WELLS—TECHNICAL</b>	
High	Failure to acquire the necessary well licence prior to commencing site preparation, construction, and/or operation.
High	Failure to prepare an H <sub>2</sub> S release rate assessment when information in the public domain demonstrates the potential to encounter H <sub>2</sub> S in the proposed well.
Low	Filing an application when the applicant is not a working interest participant.
Low	Failure to apply for the correct category/type of well.
Low	Failure to submit a survey plan that meets all applicable requirements.
Low	Failure to design to meet the pressure testing requirements for well re-entry licence application.
High	Failure to design the surface casing to meet all applicable requirements.
High	Failure to provide adequate groundwater protection.
High	Failure to acquire a mineral lease continuation (no agreement with DOE).
High	Failure to have permission from the mineral rights owner or lessee to exceed the 15 m maximum overhole depth prior to filing the application.
High	Failure to acquire the rights to the intended formation(s).
High	Incomplete DSU for the intended formation(s).
High	No rights to substance(s) for the intended formation(s).
High	Failure to acquire the abandoned wellbore rights.
High	Failure to meet or address the water body setback requirement prior to filing the application.
High	Failure to meet the surface improvement requirements prior to filing the application.
High	Failure to meet ERCB <i>Directive 056</i> environmental requirements prior to filing the application.
High	Failure to obtain approval from Alberta Culture and Community Spirit for sites with Historic Resource Value of 1, 2, or 3 prior to filing the application.
Low	Failure to notify Alberta Culture and Community Spirit for sites with a Historic Resource Value of 4 and 5 prior to filing the application.
Low	Failure to provide a geological prognosis and discussion regarding the potential to encounter H <sub>2</sub> S in all prospective formations.
Low	Failure to provide geological mapping for the primary and secondary formations, as indicated in Schedule 4: Well Purpose.
Low	Failure to provide an engineering discussion of the H <sub>2</sub> S prospective formations.
Low	Failure to include the 15 m overhole zone evaluation in the H <sub>2</sub> S release rate assessment.

(continued)

**Table 4.1. Consequences for noncompliance events (concluded)**

Risk consequence	Noncompliance events
Low	Failure to meet the map or schematic cross-section requirements for the H <sub>2</sub> S release rate assessment prior to filing the application.
Low	Failure to provide all basic elements, including the AOF test type, in the H <sub>2</sub> S release rate assessment prior to filing the application.
Low	Failure to tabulate the results of the AOF and H <sub>2</sub> S information in the manner required prior to filing the application.
High	Failure to submit a well licence application as "wells-technical nonroutine" when required.
Low	Failure to file a licence amendment application when required.
Low	Failure to submit the requested audit documentation.

#### 4.4.2 Acquisitions

In cases of corporate property acquisitions or mergers, it is in the company's best interest to obtain all relevant application documentation when it acquires ownership of a facility, pipeline, or well.

- 8) A new owner is expected to assess all newly acquired properties to ensure that the property is operating with the correct *Directive 056* licence.
- 9) If a *Directive 056* noncompliance is identified, the new owner should notify Facilities Applications of the noncompliance and bring the matter into compliance.

#### 4.4.3 Audit/Inspection Categories

The application requirements of *Directive 056* have been sorted into the following four audit/inspection categories, as reflected in Table 4.1:

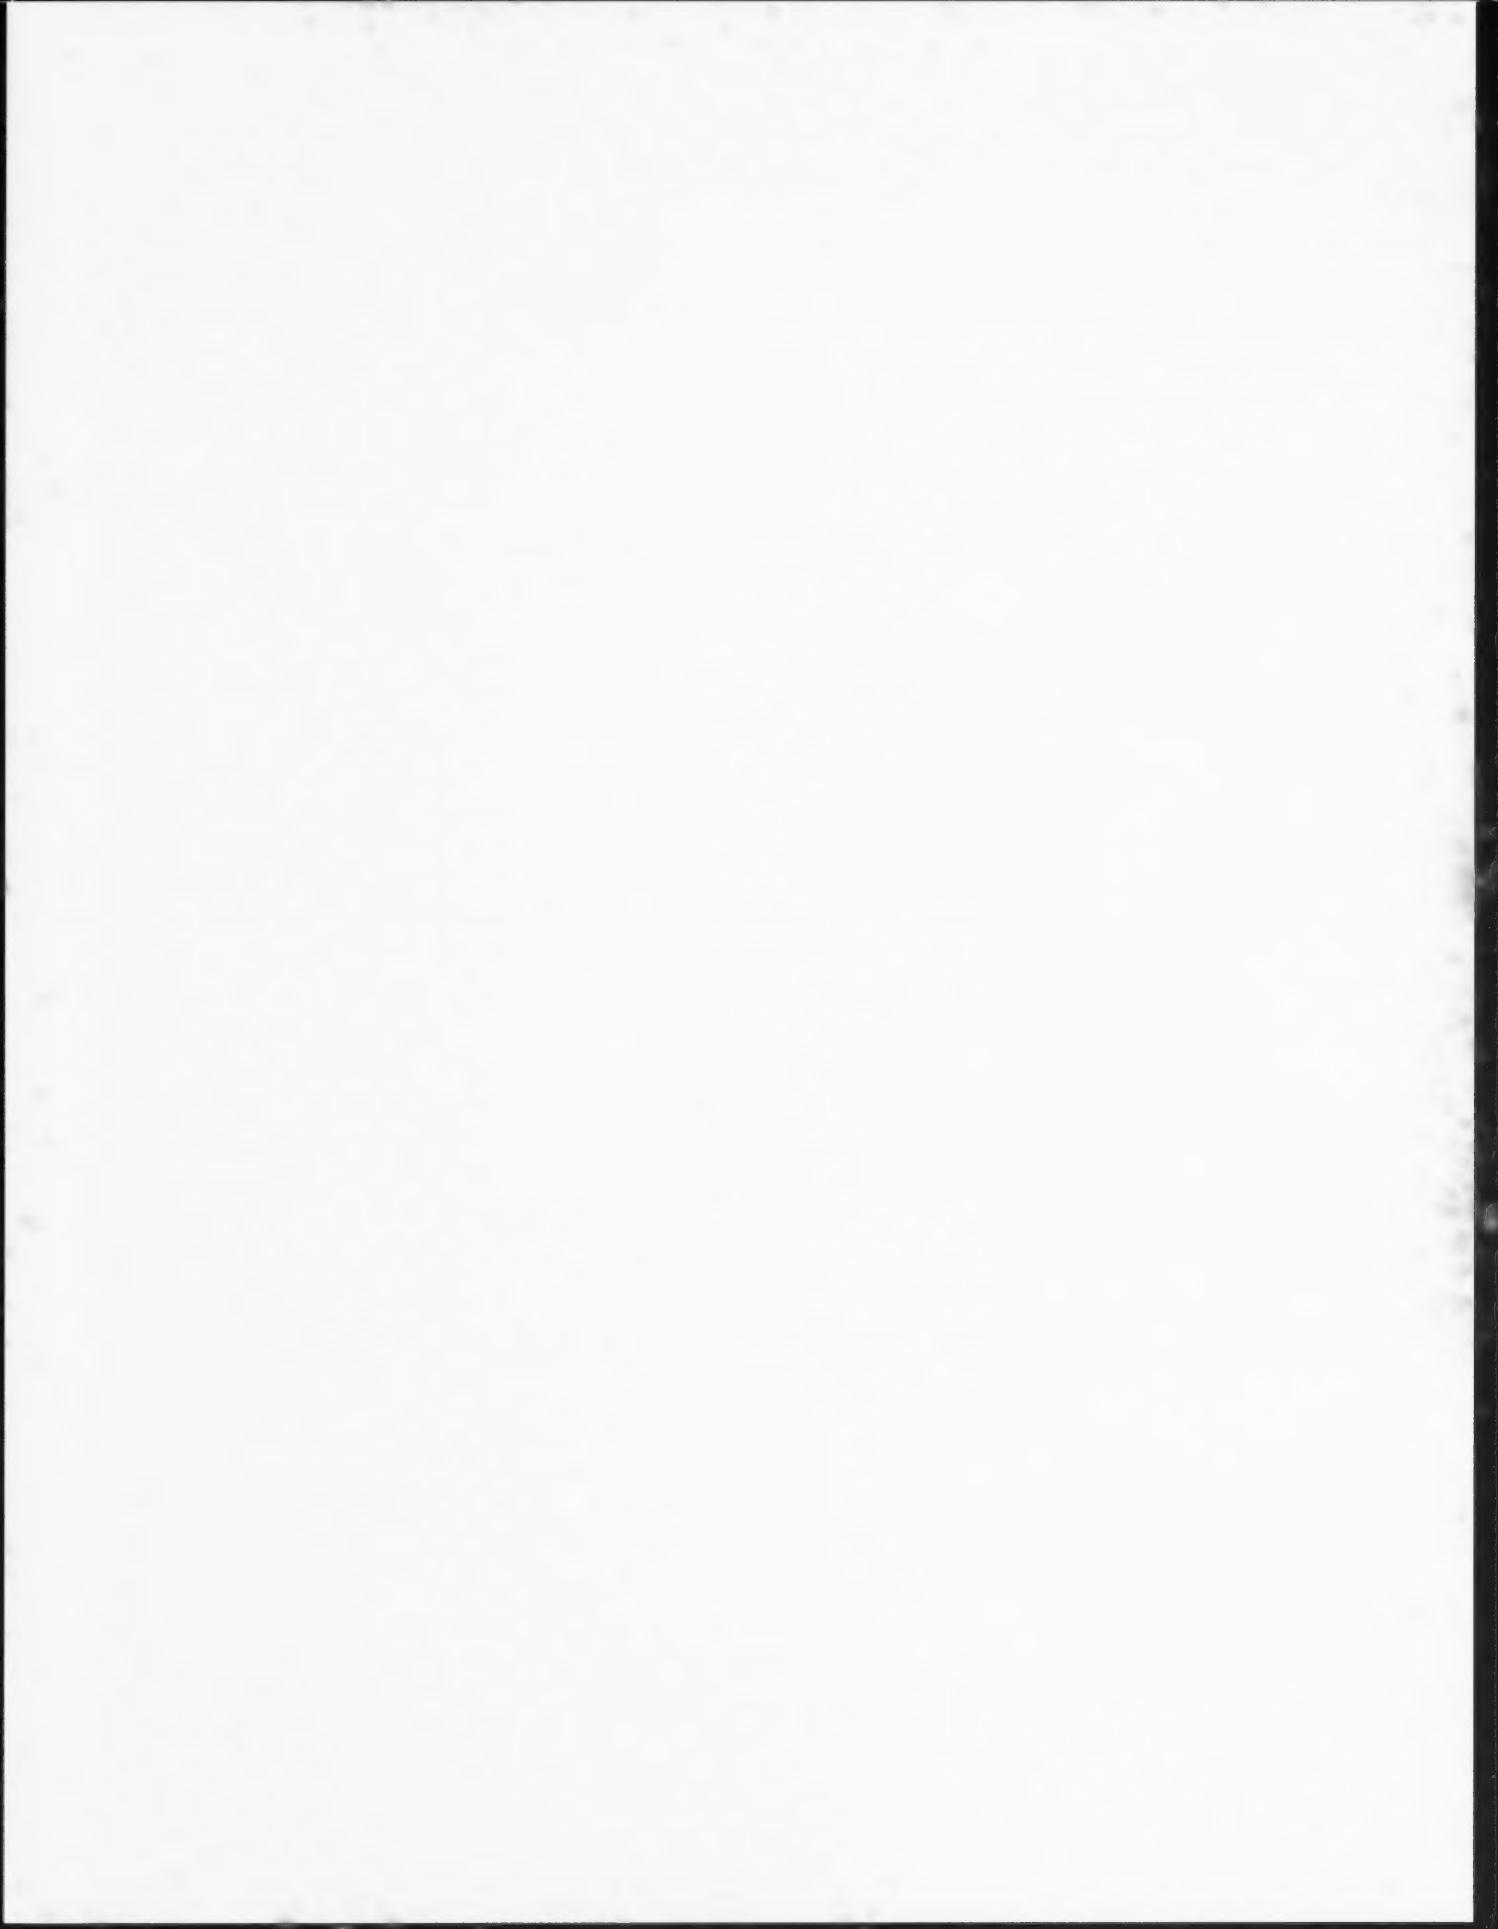

- Participant Involvement
- Facilities—Technical
- Pipelines/Pipeline Installations—Technical
- Wells—Technical

#### 4.4.4 Compliance Records

Audit results from *Directive 056* application audits are managed by Facilities Applications. A company wishing information on its compliance record pertaining to *Directive 056* applications must contact Facilities Applications. The request must be submitted in writing on company stationery.

#### 4.4.5 Enforcement Review Process

Licensees may request a review of the enforcement and that further consideration of the enforcement action occur if it has new information that was not initially provided or there were unusual circumstances contributing to the noncompliance event. See *Directive 019* for further details.

## **Section 5 Facility Licence Applications (Schedule 2)**

### **5.1 Overview**

An applicant must use Schedule 2 to apply for a facility licence to construct and operate any upstream oil or gas production, injection/disposal, or processing facility or to submit a licence amendment application.

Depending on the project, ERCB Facilities Applications requires the submission of one Schedule 1, along with one or more of the following forms:

- Schedule 2: Facility Licence Application
- Schedule 2.1: Working Interest Participants—Facilities
- Schedule 2.2: Gas Plants—Facilities
- Schedule 2.3: H<sub>2</sub>S Information—Facilities
- Schedule 2.4: Compressors/Pumps—Facilities

### **5.2 Project Submissions**

A project is defined as a network of facilities, pipelines, and/or wells that connect to a common facility. A project submission may consist of the consecutive submissions of related single licence applications or the single submission of multiple licence applications for related facilities, pipelines, and wells. The ERCB encourages applicants to identify related applications that are part of the same project through the use of a common reference number in the Applicant's Reference section.

**Numbered statements represent requirements and expectations (see Section 1.4).**

- 1) If the applicant is filing a project submission:
  - a) a project must be submitted under one company name using one Schedule 1;
  - b) the applicant must complete a separate Schedule 2 for each facility in the project; and
  - c) each Schedule 2.1, 2.2, 2.3, and 2.4 must be related to only one Schedule 2.

### **5.3 Licence Expiry**

New facility licences expire one year from the date of issue if the licence has not been acted on (i.e., construction has not started). After one year, the ERCB will cancel the expired licence from the active records. It is the licensee's responsibility to ensure that the facility licence is still valid and has not expired prior to initiating any activity associated with the licence. Companies are asked to provide a courtesy notification to the applicable ERCB Field Centre using the ERCB electronic notification process (FIS) advising that construction has commenced on the licensed facility.

- 2) If an applicant intends to proceed with a project for which a licence has expired, it must cancel that previous licence and also fulfill all applicable regulatory requirements, including all participant involvement requirements (Section 2), before filing a new application.
- 3) If an applicant does not intend to proceed with the licence, it must notify Facilities Applications in writing and request that the licence be cancelled.

Due to the complexity of some developments, it is possible that the applicant may not be able to act on a permanent facility licence or complete operations at a temporary facility before the expiry date. Applicants can file a licence amendment application to extend the expiry date of a facility licence or a temporary facility licence for up to 6 additional months.

- 4) Prior to initiating new construction when a licence is nearing licence expiry, the applicant must conduct a new resident/landowner search and determine if any new issues may have arisen since the licence was granted.
- 5) Applicants must conduct full participant involvement work in order to apply to extend the expiry date of a facility licence or a temporary facility licence.

A facility licence that has been acted on cannot be cancelled and needs to be abandoned (see Section 5.9.2). Licensees that do not intend to act on a facility licence may request that the licence be cancelled by contacting the Facilities Applications Audit Team Leader.

#### 5.3.1 Licence Extensions

The ERCB issues a licence for a term of one year. An applicant may make a request to extend the expiry date of an applied-for licence at the time of application. Requests for extensions will be considered on a case-by-case basis, but the date of expiry will normally not extend beyond two years from the date the licence was issued.

The ERCB may extend the expiry date of a licence that has already been issued with a one-year term upon request of the licensee. However, a licence that was originally issued with a term greater than one year will not be extended.

- 6) To get an extended expiry date for an applied-for licence, the applicant must confirm at the time of application that it will update the associated participant involvement program before it acts on the licence.
- 7) To get an extended expiry date for an existing licence, the licensee must submit documentation to Facilities Applications confirming that it will update the associated participant involvement program before it acts on the licence.

#### 5.4 Category Type and Consultation and Notification Requirements

Table 5.1 lists the types of facilities that require a licence under *Directive 056*, along with respective consultation and notification requirements. The category type of facility is dependent on the H<sub>2</sub>S and sulphur content of the inlet gas stream.

Facilities associated with an in situ crude bitumen scheme approval require licensing under *Directive 056*. However, this facility application should not be submitted until the scheme approval has been received from the ERCB Resource Applications Group (see *Directive 023: Guidelines Respecting an Application for a Commercial Crude Bitumen Recovery and Upgrading Project*).

It is important that licensees/operators be aware of the operational and equipment scenarios requiring a facility licence and when a modification to an existing facility warrants a licence amendment application.

- 8) The applicant must identify the correct category type for the proposed facility project and perform all associated consultations and notifications.
- 9) The applicant must file an application for a multiwell battery or satellite when the surface equipment on site meets the requirements for licensing and when
  - a) a single well has segregated production from more than one zone (i.e., not commingled in the wellbore) producing to the battery or satellite;
  - b) a new inlet, which includes, as a minimum, measurement for the production from a second well, is added to an existing single-well battery or satellite; or
  - c) multiple single-well batteries or satellites are operating within one surface lease.

If the applicant has both oil and gas production from separate wells or segregated zones within the same well at the same surface location, the surface facility should be licensed for the most significant operation at the site.

- 10) If the processing of solution gas or nonassociated gas is implemented at an existing licensed oil battery, the gas processing equipment must be licensed as a separate facility.

**Table 5.1. Facility category type and consultation and notification requirements**

Category	Name	Type	Description	Personal consultation and confirmation of nonobjection	Notification

## 5.5 Exemptions

- 11) Although no application is required under *Directive 056* for the following exempted activities and facilities (Sections 5.5.1 and 5.5.3), the company must provide a project-specific information package to landowners, occupants, and residents who may be directly and adversely affected by the activity.
- 12) If a concern/objection to the proposal is received, the company must advise the ERCB of the concern/objection. The ERCB may require that a nonroutine application be submitted. Should an application be required, it will be designated nonroutine by the ERCB and will undergo a full review before disposition of the application.
- 13) Even though applications may not be required for activities and facilities in Sections 5.5.1 and 5.5.3 under *Directive 056*, a company must meet all applicable regulatory requirements.

If the company is unable to meet all the regulatory requirements, it must obtain a waiver from the requirement from the appropriate ERCB group.

### 5.5.1 Single-Well Facility Sites

An application is not required under *Directive 056* if the facility is a single-well site (oil, bitumen, or gas) where the  $\text{H}_2\text{S}$  content is less than 0.01 mol/kmol and

- total on-site wattage for compressors is less than 75 kilowatts ( $\text{kW}$ ),
- there is no gas processing, and
- there is no injection/disposal component.

An application is not required under *Directive 056* if the facility is a single-well gas site where the H<sub>2</sub>S content is greater than 0.01 mol/kmol and

- there are no liquid hydrocarbon-produced water storage tanks,
- there is no gas compression
- there is no gas processing, and
- there is no injection/disposal component.

Appendix 8 contains a stepped approach to licensing gas facilities to further clarify the licensing process for gas facilities.

### **5.5.2 Other Facilities**

The licensing of the following facilities does not occur under *Directive 056*:

#### **5.5.2.1 Installation of on-site power generating equipment**

On-site power generation is managed and approved by the Alberta Utilities Commission (AUC). Although the facility licence should include emissions and noise impact from all sources on-site, power generation equipment is not licensed through *Directive 056*. For more information, contact the AUC.

#### **5.5.2.2 Oil Sands Processing Plants**

Oil sands scheme approvals for in situ operations continue to be issued under *Directive 023* and *Directive 078: Regulatory Application Process for Modifications to Commercial In Situ Oil Sands Projects* through the ERCB Oil Sands and Coal Branch. Licences for surface facilities associated with oil sands mine approvals are not issued under *Directive 056*.

Surface facilities associated with approved in situ schemes require a *Directive 056* facility licence. Applications for in situ oil sands central processing units should be applied for using the category type multiwell bitumen batteries.

Stakeholder notification that has been completed as part of a *Directive 023* application for a new in situ oil sands project or an amendment to an existing project satisfies the participant involvement requirements for any related *Directive 056* application for facilities within the ERCB-approved in situ oil sands area.

#### **5.5.2.3 Oilfield Waste Management Facilities**

Applications for oilfield waste management facilities (i.e., requests to construct and operate new facilities or modify existing facilities and notifications of minor modifications to existing facilities) required under *Directive 058: Oilfield Waste Management Requirements for the Upstream Petroleum Industry* and *Directive 058—Addendum 2008-12-23: Oilfield Waste Management Facility Approvals – Notification and Amendment Procedures* are processed in the ERCB Applications Branch by Facilities Applications. Applications for one-time approvals and pilot projects, pursuant to Section 4 of *Directive 058—Addendum 2008-12-23*, are processed by the ERCB Waste and Storage Section.

If a facility currently licensed under *Directive 056* becomes a waste management facility, a *Directive 058* approval is required and the previously issued *Directive 056* licence will

be cancelled. Operators are reminded that the receipt of oilfield waste from outside of a facility's production system for consolidation and transfer or for on-site storage or management is not permitted unless the facility is approved as an oilfield waste management facility.

### 5.5.3 Exempt Activities

Applications are not required for the following activities under *Directive 056* provided that the activity does not change the category type of the facility:

- temporary compressors in continuous use for less than 21 consecutive days as an alternative to flaring for such operations as the conservation of initial well test gas or plant turnaround, provided that landowner nonobjection has been obtained and regulatory requirements are met (see *Directive 060*);
- replacing measurement and separation equipment;
- installation of downhole (subsurface) equipment;
- adding well production to an existing licensed multiwell facility;
- replacing a compressor or injection/disposal pump with the same type and size or a smaller one, such that total emissions do not increase;
- adding separators, dehydrators, pressurized bullets, process pumps, or group or test vessels to an existing licensed facility;
- adding a line heater to an existing licensed facility;
- adding a vapour recovery unit to an existing licensed Category C, D, or E facility;
- adding one compressor less than 75 kW to an existing licensed facility, provided that the landowner has been notified and has no concerns and that the facility will meet the nitrogen oxides ( $\text{NO}_x$ ) and the noise requirements at the nearest residence (this does not apply to acid gas injection compressors regardless of size); compressors less than 75 kW that were installed previously as an exempt activity should be captured on Schedule 2.4 the next time an amendment application for the facility is required;
- adding storage tanks to an existing licensed facility. If additional storage tanks are added, the licensee must ensure that all *Directive 055* requirements have been met, including secondary containment. If the requirements will not be met, the licensee must contact ERCB Operations for assistance.

## 5.6 Records Correction

Applications to correct licence records should follow the self-disclosure process (see Section 3.9) for licence amendments.

## 5.7 Licence Amendments

Only facilities that have an existing ERCB facility licence number can be amended. Licensees may use the licence amendment (LA) applications process based on the criteria in Table 5.2.

Applicants may apply for multiple types of licence amendments on one Schedule 2; however, note that licence amendment types 10 and 11 cannot be done in combination with any other amendment type. Not all types of licence amendments are available for all category types (see Table 5.3).

**Table 5.2. Licence amendment (LA) types**

Reference	Schedule 2 Licence Amendment Type
LA1	Change category and/or type of facility
LA 2	Install and/or remove compression at existing licensed facilities (except standalone injection/disposal facilities)
LA 3	Change the maximum licensed inlet rates (design rates) of existing licensed facilities
LA 4	Change the licensed H <sub>2</sub> S content of raw inlet gas at any existing licensed Category C, D, or E facility
LA 5	Install and/or remove injection/disposal pumps at an existing licensed facility
LA 6	Change the types of products recovered and/or the rates of recovery at an existing licensed gas processing plant
LA 7	Add regenerative sweetening equipment to an existing licensed gas processing plant
LA 8	Add nonregenerative sweetening process to an existing licensed Category C, D, or E facility
LA 9	Change the maximum continuous sulphur emissions rate at an existing licensed Category C, D, or E facility
LA 10	Extend the expiry date of a temporary facility or permanent facility for up to an additional 6 months
LA 11	Change the status of a temporary facility to a permanent operation
LA 12	Add a new flare/incinerator stack (a new source of emissions) at an existing licensed facility
LA 13	Increase the sulphur recovery efficiency at an existing licensed sulphur recovery plant or acid gas injection facility
LA 14	Decrease the sulphur recovery efficiency at an existing licensed sulphur recovery plant or acid gas injection facility
LA 15	Change the method of acid gas disposal at an existing licensed Category C, D, or E gas processing plant
LA 16	Degrandfather an existing licensed sulphur recovery plant in accordance with the sulphur recovery requirements of ID 2001-05

- 14) When filing a licence amendment application, the applicant must retain the original facility type (e.g., gas battery, oil battery) unless
  - a) additional equipment proposed for installation will cause the gas facility to become a gas processing plant (e.g., the addition of a refrigeration skid will change an existing compressor station to a gas processing plant); or
  - b) equipment proposed for removal will cause the facility type to change (e.g., the removal of the refrigeration process will change an existing gas processing plant to a gas battery).
- 15) Applicants must file licence amendment applications when the proposed activity will result in an increase to emissions, risk, and/or public impact.
- 16) Participant involvement requirements for licence amendment applications are based on the category type of facility being amended (see Table 5.1).

New facility licence applications for C, D, and E gas processing plants and licence amendment applications for E category gas processing plants are designated nonroutine and require that all supporting audit documentation be submitted with the application schedules. Licence amendment applications for C and D gas processing plants may be submitted routine unless there is a nonroutine participant involvement or technical issue.

Table 5.2 provides a reference for the licence amendment types in Step 4 of Schedule 2.

#### 5.8 Participant Involvement Requirements

- 17) The applicant must ensure that the requirements set out in Section 2 are met for the radius set out in Table 5.1.
- 18) The applicant must meet the information requirements as part of personal consultation and notification for all facility licence applications (Section 2).

- 19) The applicant must provide information packages to those persons set out in Table 5.1 and be prepared to discuss the project, if requested, with any person to whom an information package was sent.
  - a) If personal consultation is required, the applicant must
    - i) provide the project-specific information package, which must meet the information requirements described in Section 2 and include any other information to assist in understanding the proposed development;
    - ii) provide the letter from the Chairman of the ERCB;
    - iii) provide the ERCB brochure *Understanding Oil and Gas Development in Alberta*;
    - iv) provide the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*;
    - v) provide the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
    - vi) offer copies of all other current ERCB EnerFAQs as set out on the ERCB Web site.
  - b) If notification is required, the applicant must provide the applicant's project-specific information package and the letter from the Chairman of the ERCB and offer copies of
    - i) the ERCB brochure *Understanding Oil and Gas Development in Alberta*;
    - ii) the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*;
    - iii) the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
    - iv) all other current ERCB EnerFAQs publications as set out on the ERCB Web site.
- 20) Applicants must meet the requirements in Section 8.3 when planning sour gas activity where residents are located within the EPZ.
- 21) For category C, D, and E facilities listed in Table 5.4, the applicant must identify and notify all mineral reserve owners and licensees of existing similar facilities within the recommended radius.
  - a) The applicant must provide all mineral reserve owners and licensees with a written overview of the proposed facility, including location, type, and design capacities and the anticipated timing for application submission. The onus is then on these parties to raise any concerns/objections to the proposal with the applicant and the ERCB.
- 22) For facilities not listed in Table 5.4, the ERCB does not prescribe a radius for industry notification. Applicants are expected to determine what is a reasonable geographic area for industry notification.
  - a) The ERCB does not prescribe the area the applicant must investigate. However, the applicant is expected to consider investigation parameters similar to those in Table 5.4 and to discuss the proposal with licensees of similar facilities.

**Table 5.3. Energy development category type amendment combinations\***

CATEGORY TYPE	LICENCE AMENDMENT (LA) TYPE

\* Only certain licence amendment types are acceptable based on the category type of the facility. Acceptable licence amendment types are indicated with an "x" in this table.

**Table 5.4. Facility industry notification requirements**

Proposed facility	Mineral reserve owners	Facility licensees
New gas processing plant (Categories C and D)	5.0 km	15.0 km
Gas processing plant (Category E)	5.0 km	15.0 km
Oil and bitumen production facilities (Category D)	N/A	2.0 km

- 23) When the applicant notifies other licensees, it must continue to include these licensees in updates during the licensing process (i.e., close the participant involvement loop; see Section 2.3).
- 24) The applicant must indicate any outstanding concerns/objections by checking the appropriate bold response on Schedule 2 to indicate a nonroutine application.
  - a) The applicant must also include a written summary of the outstanding issues for ERCB review and consideration (Section 3.8.2), including a discussion as to how the applicant intends to mitigate the issues raised.

- b) The applicant and the objector are expected to consider using the ERCB's Appropriate Dispute Resolution (ADR) program to mitigate outstanding concerns/objections (Section 2).

## 5.9 Technical Requirements

The following subsections under facility technical requirements discuss various fields on Schedules 2, 2.1, 2.2, 2.3, and 2.4.

### 5.9.1 Emergency Response Planning

The emergency planning zone (EPZ) for a Category C, D, or E facility is based on the largest EPZ of any pipeline entering or leaving the facility. Applicants are cautioned that it is a violation of privacy legislation to disclose in the public portion of a facility, pipeline, or well licence application any personal information that was obtained for emergency response planning purposes. Such information must be provided in confidence to the ERCB in connection with the emergency response planning requirements set out in *Directive 071*.

### 5.9.2 Licensee Liability Rating

The Licensee Liability Rating (LLR) program assesses a licensee's ability to address its abandonment and reclamation liabilities based on a comparison of its deemed asset to its deemed liability. The licensee's deemed asset is considered to be its cash flow derived from wells for which it is the licensee. Its deemed liability is considered to be the cost to abandon and reclaim wells and facilities for which it is the licensee.

The liability assigned to active facilities is less than that of an inactive facility. A facility is considered active if it has reported production or injection within a specified period (see *Directive 006: Licensee Liability Rating (LLR) Program and Licence Transfer Process*).

Because some facilities do not report production to the ERCB, a facility's active/inactive status cannot be determined. To allow an active nonreporting facility to benefit from the reduced liability associated with an active status, the licensee can link its facility to the first downstream production reporting facility to which it delivers product and use that facility's active/inactive status. Licensees of compressor stations that produce directly to a sales gas pipeline should contact the ERCB Liability Management Group for information on how this affects their LLRs.

Licensees of abandoned facilities can change the facility status to "abandoned" through the ERCB's Digital Data Submission (DDS) system. This change is not made through *Directive 056*.

- 25) The applicant of a nonreporting facility (e.g., compressor station, satellite) must record the facility licence number of the reporting facility when filing a facility licence application or, for Category B and C compressors, indicate on the application schedule that the production goes direct to sales. If a linking number is not recorded for a nonreporting facility, the facility status will be considered inactive for liability management purposes. For a gas system, the reporting facility must be a gas facility, and for an oil facility, the reporting facility must be an oil facility.

26) The applicant of new and/or amended sulphur recovery plants, straddle plants, or bitumen central processing facilities with a bitumen inlet rate greater than 5000 m<sup>3</sup>/d must have the liability assessment completed in accordance with the Large Facility Liability Management Program (see *Directive 024*) prior to submitting an application under *Directive 056*.

### 5.9.3 Proliferation

As the proponent of a new oil or gas facility or pipeline, the applicant has already determined that the proposed project will meet its business needs. The ERCB, as the approving authority, is required to evaluate the need for the proposed project in the broader public interest. The ERCB considers this interest in terms of economic, orderly, and efficient development of Alberta's oil and gas resources.

The ERCB continues to receive strong input from the public, which is aware of the growth of resource development. The ERCB accepts the public's view that there is a need to avoid facility proliferation when possible and practical.

The ERCB sour gas proliferation requirements are set out in *ID 2001-03: Sulphur Recovery Guidelines for the Province of Alberta* and are summarized below.

27) Prior to filing an application for a new Category C, D, or E gas processing plant, the applicant must

- evaluate all existing sour gas plants and pipelines that offer viable alternatives within a 15 km radius of the proposed new sour gas plant, regardless of ownership or interest:
  - the applicant must evaluate the feasibility of upgrading an existing facility and of forging commercial partnerships with existing licensees;
  - the applicant must obtain an accurate assessment of the capabilities of existing sour gas plants, including design parameters (e.g., operating pressures and limitations on H<sub>2</sub>S content) and capacity available; and
  - the applicant must demonstrate that feasibility of modifying the facilities was evaluated with the licensee if existing plants are not designed to handle the applicant's gas or if there are capacity limitations;
    - high processing fees, in and of themselves, may not be considered sufficient grounds for rejecting the option to use an existing facility;
- assess the area's future production potential to ensure that the proposed facility is designed to meet the regional long-term processing needs;
- contact other sour gas reserve owners within 5 km of a proposed new sour gas plant with a view to inviting these well licensees to participate in the new facility in some manner; and
- include information on its assessment as part of the application audit package submitted to Facilities Applications with the application schedules.

28) The applicant of a new Category C, D, or E gas processing plant must formally contact licensees of existing facilities for required information and be able to document related responses.

- a) The ERCB expects the parties to share information in a timely manner. If the applicant is unable to obtain the information necessary to conduct an assessment, it should contact Facilities Applications.
- 29) To preclude the unnecessary development of new Category C and D facilities, the applicant is expected to investigate the feasibility of using existing facilities and/or pipelines before submitting an application to the ERCB.

#### 5.9.4 Facility Design Criteria

- 30) The inlet and recovered product rates must represent the total design rates associated with all on-site equipment at the surface location based on a daily maximum.
- 31) For facility licence amendments, the inlet and recovered product rates for the facility must represent the total on-site design rate, not only the design rates of the additional equipment.

For facilities with a sulphur inlet greater than 1 tonne per day (t/d), the raw gas inlet rate and sulphur inlet rate represent the maximum operating limits for the facility. These rates are monitored by the ERCB Operations Group.

Heavy oil/oil sands batteries and satellites are also subject to the regulatory requirements detailed in *ID 91-03: Heavy Oil/Oil Sands Operations* and *IRP Volume 3: Heavy Oil and Oil Sands Operations*.

- 32) The applicant must ensure that an oil analysis is available to demonstrate that the gravity of the inlet stream matches the category applied for and that the facility will meet the requirements of these documents for heavy oil facilities.

#### 5.9.5 Sulphur Recovery

Both the ERCB and Alberta Environment (AENV) have regulatory responsibilities for sulphur recovery. The applicant must be aware of the regulatory requirements of both agencies. (See the *Environmental Protection and Enhancement Act: Approvals and Registrations Procedure Regulation, Applications for Sour Gas Processing Plants and Heavy Oil Processing Plants: A Guide to Content*, September 1999.)

ERCB *ID 2001-03: Sulphur Recovery Guidelines for the Province of Alberta* sets out the basis for sulphur recovery and emissions reduction from

- Category D and E gas processing plants, and
- other types of upstream petroleum industry operations licensed under *Directive 056* where continuous flaring or incineration of gas containing H<sub>2</sub>S occurs (e.g., production batteries, dehydration facilities, and compressor stations where the bulk gas stream is not sweetened).

- 33) The applicant must meet the requirements of *ID 2001-03*.
  - a) If the applicant believes a variance to the minimum recovery levels of *ID 2001-03* is warranted, the applicant must file a nonroutine application.
- 34) When designing new Category D and E gas processing plants, the applicant must
  - a) comply with the calendar quarter-year sulphur recovery of *ID 2001-03*, and

b) determine the sulphur recovery based on mass (tonnes sulphur equivalent) using the following formula:

$$\text{Sulphur recovery} = \frac{\text{Sulphur production}}{(\text{Sulphur production} + \text{Sulphur emissions})}$$

where

- sulphur production = tonnes of sulphur product and/or tonnes sulphur equivalent contained in injected sour gas or acid gas streams, and
- sulphur emissions = tonnes sulphur equivalent contained in flared sour and acid gas streams and in the sulphur recovery unit tail gas or incinerator stack emissions.

- 35) For other upstream petroleum industry facilities where sulphur recovery requirements apply, the applicant must
  - a) comply with the calendar quarter-year sulphur recovery of ID 2001-03, and
  - b) determine the sulphur recovery requirements based on the sulphur content of flared or incinerated gas streams (not on the sulphur inlet of the facility), in addition to the sulphur recovery unit tail gas incinerator stack emissions.
- 36) If an applicant is filing a licence amendment application to modify a grandfathered gas plant, the applicant must meet the special provisions set out in ID 2001-03.
- 37) For facilities where subsurface injection is the method of acid gas disposal, a separate ERCB approval is required for the injection scheme, in accordance with the requirements of *Directive 065: Resources Applications for Conventional Oil and Gas Reservoirs*. Additional information may be obtained from ERCB Resource Applications.

#### 5.9.6 Process Flow Diagrams

- 38) The applicant must attach a process flow diagram (PFD) for each facility application.
  - a) The PFD must identify all existing and proposed equipment at the facility.
    - i) For licence amendments, the applicant must identify the new equipment proposed for installation on a full-site PFD; a partial PFD is not acceptable.
      - New equipment must be identified in the legend and annotated on the diagram.
      - Equipment designated for removal by the application must also be clearly identified.
  - b) The applicant must clearly identify the following on the PFD:
    - i) process equipment
    - ii) measurement points
    - iii) storage vessels and tanks (including pop tanks)
    - iv) source(s) of all inlet/receipts and/or deliveries, including all fuel lines, flare lines, and vent points

- v) safety equipment (i.e., location of emergency shutdown device [ESD] block valves and depressurize points)

Typical diagrams are acceptable, providing that they accurately represent the actual operations of the facility and contain the correct location and applicant name. Piping and instrumentation diagrams (PIPs) should be submitted if available at the time of application.

#### 5.9.7 Total Continuous Emissions

- 39) The applicant must include the volume of gas from all sources on site that is disposed of by burning in a flare or incinerator. This does not include fuel gas used for header purge, pilot fuel, make-up gas to achieve effective combustion, sulphur recovery unit tail gas, or volumes attributed to emergency conditions or maintenance operations.
  - a) Applicants proposing to flare and/or incinerate gas must comply with the requirements of *Directive 060*.
- 40) The applicant must include the volume of gas vented from all sources on site, including any volumes of CO<sub>2</sub> associated with a sweetening process.
  - a) Applicants proposing to vent gas must comply with *Directive 060* and Section 8.080 of the *Oil and Gas Conservation Regulations (OGCR)*.
- 41) The applicant must evaluate the conservation of continuous flared, incinerated, and vented volumes in accordance with *Directive 060*.

If NO<sub>x</sub> emissions are present, it is the applicant's responsibility to ensure that the facility meets the *Alberta Ambient Air Quality Objectives (AAAQO)* for NO<sub>2</sub>. It is possible that facilities exempt from registration with AENV could exceed the AAAQO. It is in the company's best interest to conduct modelling to ensure that its facility will meet the AAAQO. In order to demonstrate that the facility meets the AAAQO, the ERCB may require that the applicant provide NO<sub>x</sub> modelling.

- 42) In designing its compression needs, the applicant must design the facility to meet the requirements set out by *IL 88-05: Application for Approval of Natural Gas Driven Compressors and AENV's Code of Practice for Compressor and Pumping Stations and Sweet Gas Processing Plants*.
- 43) The applicant must register all compressor stations, pumping stations, and Category B gas processing facilities with AENV before commencing operation if the total NO<sub>x</sub> emissions are greater than 16 kilograms per hour (kg/h).
- 44) New and additional natural gas-driven reciprocating engines greater than 600 kW at full load must not emit more than 6 grams of NO<sub>x</sub> per kilowatt-hour (g/kWh).
- 45) The applicant must meet the following requirements when NO<sub>x</sub> emissions are present at facilities that require registration or approval with AENV:
  - a) Dispersion modelling must be conducted in accordance with AENV's *Air Quality Model Guideline* (<http://environment.gov.ab.ca/info/library/6709.pdf>).

- b) Based on dispersion modelling, predicted NO<sub>x</sub> concentrations must meet the AAAQO, using guidance from the *Air Quality Model Guideline*.
- c) Standby equipment used only for emergency purposes may be excluded from dispersion modelling.
- d) The engine exhaust stack height must be set in accordance with the direction given in *IL 88-05: Application for Approval of Natural Gas Driven Compressors and AENV's Code of Practice for Compressor and Pumping Stations and Sweet Gas Processing Plants*.
- e) NO<sub>x</sub> emissions from steam generating units, heaters, and boilers may be excluded from dispersion modelling if their combined contribution is less than 3 per cent of the total NO<sub>x</sub> emissions.

*Directive 039: Revised Program to Reduce Benzene Emissions from Glycol Dehydrators* sets out requirements for the reduction of benzene emissions from glycol dehydrators. In the directive, licensees are required to submit to the ERCB an annual Dehydrator Benzene Inventory List. In an effort to ensure that the list is kept current, the ERCB is seeking to have facility applications that include glycol dehydrators identified for tracking purposes. This will be done through the use of an Alternate Reference on Schedule 1 under the Applicant's Reference section for all new and amended facilities that include glycol dehydrators in the design. Applicants are expected to fill out this reference with the code of GDEHY for all facility applications that include glycol dehydrators.

#### 5.9.8 Compressor and Pump Additions

Temporary compressors in use for less than 21 consecutive days to test new gas well production as an alternative to flaring do not require a licence under *Directive 056*, provided that

- there is no other compressor on site,
- the licensee/operator has obtained landowner and resident nonobjection, and
- the compressor will meet all regulatory requirements, including noise and NO<sub>x</sub> requirements.

- 46) If there are any outstanding concerns/objections, the applicant must file a nonroutine application.
- 47) The use of temporary compressors is limited to a one-time-per-site occurrence. For further information on temporary compressors, see *Directive 060*. Licensees/operators must notify the ERCB Field Centre prior to operation.
- 48) Licensees are not required to submit a licence amendment application for the purpose of adding one compressor or pump less than 75 kW to an existing licensed facility. In these instances, the licensee must
  - a) provide the landowner with a written description of the project,
  - b) ensure that there are no outstanding concerns/objections, and
  - c) ensure that the facility will meet the NO<sub>x</sub> and noise requirements.

This exemption does not apply to acid gas injection compressors, regardless of size, and does not apply to the use of temporary compression greater than 75 kW for any period of time for the purpose of determining permanent compression requirements.

Compressors less than 75 kW that were installed previously as an exempt activity should be captured on Schedule 2.4 the next time an amendment application for the facility is required.

All compressors at a site are to be licensed as part of the facility unless the equipment is used to provide instrument air.

Applications are required for all compressor installations at new facilities regardless of the kW rating if the H<sub>2</sub>S content of the inlet gas is greater than 0.01 mol/kmol (not including temporary compressors used for new gas well testing less than 21 consecutive days).

Applications are not required for the installation of process pumps that are not related to the injection/disposal of water or for EOR purposes (e.g., glycol or chemical injection pumps, oil or water transfer pumps, recycle pumps, injection booster pumps).

- 49) The applicant must apply for the installation of the pumps associated with the injection/disposal component of a facility, regardless of pump size.
  - a) The applicant must amend the existing facility licence, retaining the original category type, to add an injection/disposal component to an existing licensed facility.
  - b) Third-party injection/disposal facilities must be licensed as waste disposal facilities under *Directive 058*.

A Schedule 2 application is for the purpose of licensing upstream surface facilities. For licensing of compressors or pump stations on transmission pipelines (sales products), see Section 6.

Facility licences issued under *Directive 056* do not include the installation of generators whose purpose is to generate power as part of a solution gas conservation process. In such cases, *Directive 056* remains the licensing point for the battery portion of the operations, while the generators require licensing with the AUC.

#### **5.9.9 Setback Requirements**

There are specific setback distances between Category C, D, and E facilities and permanent dwellings, unrestricted country developments, urban centres, or public facilities.

- 50) The applicant must meet the applicable setback requirements in Table 5.5 based on the calculated H<sub>2</sub>S release volume for pipeline(s) associated with the proposed facility.
- 51) The applicant must consider the level designation of inlet/outlet pipelines and use the highest level designation to determine the facility setback requirement.
- 52) Release volumes from on-site equipment must not be totalled to determine the setback requirements of the facility.

53) The applicant must address the issue of the setback restrictions of Table 5.5 during its participant involvement process (see Section 2).

**Table 5.5. Setback requirements for Category C, D, or E facilities with pipelines containing H<sub>2</sub>S**

Level	H <sub>2</sub> S release volume (m <sup>3</sup> )	Minimum distance
1	< 300	Lease boundary
2	≥ 300 to <2000	0.1 km to individual permanent dwellings and unrestricted country developments
		0.5 km to urban centres or public facilities
3	≥ 2000 to <6000	0.1 km to individual permanent dwellings up to 8 dwellings per quarter section
		0.5 km to unrestricted country developments.
		1.5 km to urban centres or public facilities
4	≥ 6000	As specified by the ERCB but not less than Level 3

#### 5.9.10 Plot Plans and Spacing Requirements

54) A plot plan must be submitted with each facility application that clearly indicates the on-lease location of all the equipment (with the exception of valves) indicated on the PFD and reflects all surface improvements, water bodies, and vegetation for a minimum of 100 m past the edge of the lease, to demonstrate that all off-lease spacing requirements have been met (e.g., distance to a residence, water bodies, forestation, or road allowance).

A diagram illustrating the spacing requirements is in Appendix 6. The following is an abbreviated list of the spacing requirements. A complete list is in Section 8 of the *OGCR*, and *ID 91-03: Heavy Oil/Oil Sands Operations and Clarification*.

55) The applicant must meet the ERCB's spacing requirements. If it does not, a nonroutine application is required.

- a) Tanks containing fluids other than fresh water must be located so that the distance from the outer perimeter of the dike to any surface improvement (other than a public roadway) is not less than 60 m (*OGCR 8.030[4]*).
- b) Facility equipment must maintain a minimum distance of 100 m from a water body (*OGCR 8.060*).
- c) Flare pits and flare line ends must not be located closer than 100 m to a surface improvement, except a surveyed roadway, (*OGCR 8.080[3]*). Flares and incinerators must be located at least 40 m from a surveyed roadway or road allowance with open public access (*Directive 060*, Section 7.8).
- d) A flare pit or the open end of a flare line must not be located or remain within 50 m of a well or oil storage tank (*OGCR 8.080[5]*).
- e) A flare pit or open end of a flare line must not be located or remain within 25 m of any oil or gas processing equipment (*OGCR 8.080[5]*).
- f) Oil storage tanks must be at least 50 m from a well (*OGCR 8.090[3]*).
- g) Flame-type equipment must not be placed or operated within 25 m of a well, oil storage tank, or other source of ignitable vapour (*OGCR 8.090[4]*).

- h) Flame-type equipment must not be placed or operated within 25 m of any process vessels unless, where such is applicable, the flame type equipment is fitted with an adequate flame arrester (*OGCR* 8.090[5]).
- i) The exhaust pipe from an internal combustion engine, located less than 25 m from a well, process vessel, oil storage tank, or other source of ignitable vapour must be located at least 6 m from the vertical centre of the well and directed away from the well (*OGCR* 8.090[9]).
- j) The flare, incinerator, and enclosed burner spacing must comply with the requirements defined in the current *Forest and Prairie Protection Regulations*.
- k) Compressors (electrically or engine driven) that are permanent and housed in a building must be located 25 m or more from wells.
  - Compressors are considered permanent when placed on pilings or a defined foundation and connected to the facility with rigid piping.
- l) Nonpermanent compressors (on wheels or skid mounted) must be spaced such that the air intakes and exhaust must be no closer than 6 m to a well.
  - Compressors are considered nonpermanent when they can be quickly disconnected and moved from where they are placed and there is no associated foundation constructed.
- m) Nonpermanent electrically driven compressors must comply with the current edition of *Code for Electrical Installations at Oil and Gas Facilities*, Safety Codes Council (Alberta).

Location of tanks and flare systems relative to public roadways are not specified in the *OGCR*. When planning facilities within 100 m of a municipal road, applicants should discuss the placement of tanks with the local authority. Additionally, for facilities planned within 300 m of a major (numbered) highway or within 800 m of an intersection of two major highways, applicants should contact Alberta Infrastructure and Transportation for permit requirements.

#### **5.9.11 Vapour Recovery and Odour Control**

Trucks are viewed as part of the facility operation when loading, unloading, and transporting fluid containing H<sub>2</sub>S gas.

- 56) For facilities where the maximum H<sub>2</sub>S content of the inlet gas is greater than 0.01 mol/kmol, the applicant must ensure that there are no off-lease odours from trucking operations and the transfer of fluids containing H<sub>2</sub>S gas by implementing a method to control off-lease odours, such as the use of a pressurized/sealed vessel.
- 57) For facilities where the maximum H<sub>2</sub>S content of the inlet or vented gas is greater than 10 mol/kmol, the applicant must include a suitable method to recover and handle vapours from stock tanks or burn the vapours. When designing the facility, the applicant must ensure that stock tank vapours are not discharged to the atmosphere without proper combustion of the sulphur compounds.
- 58) If a vapour recovery unit is required because the composition of the inlet stream has changed and the gas stream now contains more than 10 mol/kmol of H<sub>2</sub>S, the

licencee must submit an application to change the category type of the facility to Category C, D, or E.

Applicants are not required to file a licence amendment application for the purpose of installing a vapour recovery unit at an existing Category C, D, or E facility, provided that the landowner has been provided with a written description of the project and has no concerns and the facility meets the NO<sub>x</sub> requirements and the noise requirements at the nearest residence.

- 59) The applicant must file a nonroutine application and include an explanation of the proposed method of vapour control when the maximum inlet H<sub>2</sub>S content of the gas is greater than 10 mol/kmol and a vapour recovery unit will not be installed.

#### 5.9.12 Noise Requirements

All facilities under the ERCB's jurisdiction must meet the requirements of *Directive 038: Noise Control*.

A noise impact assessment (NIA) ensures that the applicant has considered possible noise impacts before a facility is constructed or operated. The NIA predicts the expected design sound level from the facility at the nearest or most affected residence.

- 60) Applicants must discuss noise matters with area residents during the design, construction, and operating phases of the facility.
- 61) An NIA must be completed prior to submission of a facility application for any new permanent facility or for modifications to existing permanent facilities if there is a reasonable expectation of a continuous or intermittent noise source.
  - a) For the purpose of an NIA, a permanent facility is a facility in operation for more than 2 months.
- 62) If the NIA indicates that the permissible sound level will be exceeded, the applicant must consider further mitigative measures.
  - a) If mitigative measures are not practical, the applicant must file a nonroutine licence application and explain why mitigative measures are not practical.
- 63) The ERCB expects the applicant to use a reasonable technical basis for the values presented in the NIA, such as computer modelling, field measurements of similar equipment, accepted acoustical engineering examples from literature, and calculations.
- 64) If the applicant is using manufacturer's specifications, the sound level ratings must represent free or far field conditions.
  - a) Sound level ratings at 1 m are not acceptable for inverse square law calculations.

See *Directive 038* for further discussion.

### **5.9.13 Production Measurement Guidelines**

The ERCB provides measurement and reporting requirements and guidelines to assist those applying to construct, operate, or modify any upstream oil or gas production, transportation, injection/disposal, or processing facility. The applicant is expected to meet all requirements of the production measurement references listed in Appendix 2.

- 65) The licensee must accurately measure and report volumes of produced oil, gas, and water in order to
  - a) provide reservoir management information,
  - b) ensure that the appropriate Alberta Crown royalties are paid,
  - c) allow for the accurate assessment of each equity owner's share of production, and
  - d) allow for the detection of escaped substances to the environment.
- 66) Applicants of surface facilities associated with in situ oil sands schemes must ensure that the Measurement, Accounting, and Reporting Plan has been approved by the ERCB Operations Group prior to submitting a *Directive 056* application.

### **5.9.14 Alberta Environment**

All applicants should be aware that additional licences or approvals might be required from AENV in accordance with the *Environmental Protection and Enhancement Act*.

If a facility requires both an ERCB and an AENV licence/approval and there are outstanding concerns/objections that were received during the participant involvement program, the applicant is encouraged to advertise both applications together through a joint notice. The applicant must ensure that all *Directive 056* participant involvement requirements have been met.

- 67) Flare stacks must be designed to meet the *Alberta Ambient Air Quality Objectives (AAAQO)* and be in accordance with methods outlined in *Directive 060* and AENV's *Air Quality Model Guideline*.
- 68) Based on dispersion modelling, the ground-level concentration of SO<sub>2</sub> must meet the *AAAQO*, based on guidance from the *Air Quality Model Guideline* and *Directive 060*.
- 69) The applicant must ensure that emissions from all combustion sources on site are reviewed in accordance with methods outlined in the *Air Quality Model Guideline*.
- 70) When dispersion modelling is required by the *Code of Practice for Compressor and Pumping Stations and Sweet Gas Processing Plants*, predicted ground-level concentrations of NO<sub>2</sub> must meet the *AAAQO*, based on guidance from the *Air Quality Model Guideline*.

### **5.9.15 Alberta Culture and Community Spirit**

- 71) For proposed new facility licences or licence amendments that require a lease expansion on Freehold lands, the applicant must consult Alberta Culture and Community Spirit's *Listing of Significant Historical Sites and Areas* to determine whether the proposed facility site will require Alberta *Historical Resources Act*

clearance prior to filing a licence application. This list outlines when a *Historical Resources Act* clearance is required and provides instructions. See also ERCB *IL 82-11: Preservation of Archaeological, Palaeontological, and Historical Resources*.

- a) If the proposed new or expanded lease is located on land identified in the list, the applicant must
  - i) obtain *Historical Resources Act* clearance prior to submitting a licence application, or
  - ii) submit the licence application as nonroutine if Alberta Culture and Community Spirit has not granted clearance, and include a detailed explanation.

#### **5.9.16 ERCB Environmental Requirements**

In 1993, the ERCB issued *IL 93-09: Oil and Gas Developments Eastern Slopes (Southern Portion)*, setting guidelines and expectations for oil and gas development in this region.

- 72) If the proposed facility is located within the Eastern Slopes (Southern Portion), the applicant must meet the General Expectations described in *IL 93-09* by
  - a) preparing development plans beyond the initial exploration stage, taking into consideration current stages, such as
    - i) pool delineation (initial),
    - ii) pool delineation (subsequent),
    - iii) pool development, and
  - b) developing environmental assessments, as outlined in *IL 93-09*.

#### **5.9.17 Working Interest Participants**

- 73) The applicant must be a working interest participant to apply for or hold a facility licence. It is not necessary to identify working interest participants for licence amendment applications. Once licensed, working interest participants are updated through the ERCB Corporate Compliance Group.

#### **5.9.18 Additional Application Requirements**

- 74) Applicants must review Section 8: Additional Application Requirements and meet all requirements applicable to the proposed location.

### **5.10 Audit Documentation Requirements—Schedule 2: Facility Licence Application**

- 75) For applications selected for audit review, licensees must submit the documents detailed below within 14 calendar days of notice of audit or within the time frame directed by the ERCB.
- 76) ERCB Facilities Applications must be able to determine from the audit documents that the applicant fulfilled all requirements to ensure regulatory compliance prior to filing the application.

77) For new Category C and D gas plants and all Category E applications, the applicant must submit the applicable audit documentation with the application for review.

The detailed list of audit documents below corresponds to the steps found in Schedule 2. For licence amendment applications, the licensee may submit only that audit documentation applicable to the amendment activity.

#### **5.10.1 Step 1: Identification**

No documentation required.

#### **5.10.2 Step 2: Participant Involvement Requirements**

##### **5.10.2.1 Participant Involvement Map Requirements**

78) The licensee must submit map(s) that illustrate

- the location of the facility,
- the location of all parties included in the participant involvement program (e.g., residents, similar facilities),
- the area of investigation used in the personal consultation and notification program,
- the location of the nearest surface development,
- the EPZ and location of residents within the calculated EPZ (if applicable), and
- the area of investigation used in the industry notification program (if applicable).

##### **5.10.2.2 Industry Notification Requirements**

79) The licensee must submit a record of contact with other industry parties that includes

- name, address, and telephone number of all parties contacted,
- copies of all related correspondence received,
- disclosure meeting minutes, including
  - date of meeting,
  - meeting notice and/or invitation,
  - invitation list, and
  - names, addresses, and telephone numbers of all meeting participants, and
- project information presented at meetings or otherwise distributed.

##### **5.10.2.3 Personal Consultation and Notification Requirements**

80) The applicant must submit a record of the personal consultation and notification program that was conducted. The applicant must use a tabular format similar to the Sample Participant Involvement Summary Form (see Appendix 4).

81) The summary must include

- a) name of each party (e.g., landowner, occupant, resident) included in the personal consultation and notification program,
- b) legal land description for each party,
- c) a description of each party's interest in the land (e.g., Crown disposition holder, landowner, resident, facility licensee),
- d) date and type of contact conducted with each party (e.g., telephone conversation, registered mail, personal meeting),
- e) date the ERCB brochure, *EnerFAQs No. 7*, *EnerFAQs No. 15*, and *Objecting to an Energy Resource Project* form were distributed where required,
- f) date the applicant's project-specific information package was distributed,
- g) date the supplementary EnerFAQs were provided, and
- h) date confirmation of nonobjection was obtained where required.

#### **5.10.2.4 Confirmation of Nonobjection**

82) The ERCB does not require that confirmation of nonobjection be in writing.

Confirmation of nonobjection may consist of one of the following documents, depending on the nature of the proposed development:

- a) Freehold lease agreement (Freehold also includes Federal Lands and Provincial Special Area Board[s] Land)
  - i) The licensee must submit a copy of the agreement that confirms the parties involved, the date of agreement, and the location of land involved.
- b) Crown disposition (i.e., signed Mineral Surface Lease, Miscellaneous Lease, or Pipeline Installation Lease; executed Area Operating Agreement or Temporary Field Authorization)
  - i) In the case of an Area Operating Agreement (AOA), the licensee must submit copies of the following AOA documents:
    - the "title page" (including the details of the expiry date, company name, and area of operation)
    - the "sign-off page" (including when the agreement was executed)
    - geographical map and locations list
  - ii) For all other Crown dispositions, the licensee must submit a copy of the agreement that confirms the parties involved, the execution of the agreement (signature), the date of the agreement, and the location of the land involved.
- c) Signed document that identifies the details of the proposal (e.g., signatory page from the applicant's information package)

83) If confirmation of nonobjection is verbal, the licensee must document (log) the name of the party providing verbal nonobjection and the date on which verbal nonobjection was obtained.

#### **5.10.2.5 Information Packages**

84) The licensee must submit a copy of the project-specific information package that was distributed to the parties included in the participant involvement process.

It is not necessary to include a copy of the ERCB's documents in the audit submission. However, details of its distribution must be included.

#### **5.10.2.6 Resolved Concerns and Objections**

85) If concerns/objections were received and resolved during the course of the participant involvement program, the licensee must submit

- a record and explanation of any concerns/objections received, and
- documentation confirming the resolution of any concerns/objections.

#### **5.10.2.7 Sour Gas Planning and Proliferation**

86) For cases where there are residents located within the EPZ of the facility, the applicant must submit

- the assessment of existing infrastructure required by Section 8.3.2, and
- the updated expanded project-specific information package as described in Section 8.3.2.

#### **5.10.3 Step 3: Emergency Response Planning**

87) The licensee must keep a copy of the corporate level ERP or, where required, the specific ERP on file. It is not required for inclusion in the audit submission.

- The licensee must include in the audit submission a statement confirming that it has an approved corporate plan and/or that a site-specific plan will be approved prior to commencing operations.

#### **5.10.4 Step 4: Application Type**

88) For Category B facilities, the licensee must submit a gas analysis representative of the inlet stream.

#### **5.10.5 Step 5: Design Criteria**

89) For all facilities, the licensee must submit a written description of the proposed process scheme and a process flow diagram.

90) For custom treating facilities, the licensee must submit an inlet analysis to determine the percentage of oil, water, and solids.

- 91) For facilities with sources of NO<sub>x</sub> and CO<sub>2</sub> emissions, the licensee must submit
  - a) a breakdown and total of NO<sub>x</sub> and CO<sub>2</sub> emissions for all sources in t/d and kg/h respectively,
  - b) manufacturer specifications to confirm NO<sub>x</sub> and CO<sub>2</sub> emissions, and
  - c) diagrams to demonstrate that the exhaust stack height requirements of *IL 88-05* are met if the total NO<sub>x</sub> emissions are less than 16 kg/h.
- 92) For facilities with continuous flaring, venting, or incineration, the licensee must submit
  - a) a list of all sources, and
  - b) the results of the ground level radiant heat intensity calculation.

#### **5.10.6 Step 6: Technical Information**

##### **5.10.6.1 Equipment Spacing Requirements**

- 93) The licensee must submit a site-specific plot plan showing
  - a) equipment placement,
  - b) the distances between equipment, and
  - c) the distance from equipment to surface improvements, vegetation, water bodies, and roads (within 100 m of the lease boundary).
- 94) The licensee must state whether ESD valves are automated or manual control.
- 95) For heavy oil facilities, the licensee must submit a representative oil analysis.

##### **5.10.6.2 Engineering and Safety Requirements**

No documentation required.

##### **5.10.6.3 Gas Conservation**

- 96) For facilities with combined continuous flaring, venting, and incineration greater than 900 m<sup>3</sup>/d recorded in Step 5, the licensee must submit the *Directive 060* economic evaluation and decision tree analysis. If it is not feasible to complete the conservation evaluation until the well test is completed, the licensee must submit an explanation of related reasons and a description of plans to complete the evaluations after initial production.
- 97) For gas processing plants with continuous flaring/incineration, the licensee must submit documentation indicating that the requirements of *Directive 060*, Section 5.1, have been met.

##### **5.10.6.4 Noise Guidelines**

- 98) For all facilities with noise-generating equipment, the licensee must submit a copy of the noise impact assessment prepared in accordance with *Directive 038*.

#### **5.10.6.5 Storage Requirements**

99) For facilities where products and materials will be stored on site, the licensee must submit a list of materials that will be stored and a description of the storage method (*Directive 055*), including details of

- design and construction,
- leak detection,
- secondary containment,
- weather protection, and
- primary containment type and size.

#### **5.10.6.6 Waste Management**

No documentation required.

#### **5.10.6.7 Production Measurement Requirements**

100) For all facilities, the licensee must submit a list and provide the location of each type of meter proposed for each measurement point.

101) For facilities with continuous flaring, venting, and incineration recorded in Step 5, the licensee must submit documentation to confirm how measurement/estimation procedures meet the requirements of *Directive 060*.

#### **5.10.6.8 NO<sub>x</sub> Emissions**

102) For facilities where the NO<sub>x</sub> emissions are less than 16 kg/h, the licensee must submit documentation or a diagram demonstrating that the stack height for each source is at least 1.2 times the peak building height. If dispersion modelling was conducted, the licensee must submit the following:

- documentation that confirms dispersion modelling was conducted in accordance with the *Air Quality Model Guideline*,
- the source parameters, locations, elevations, and NO<sub>x</sub> emission rates for all sources,
- predicted maximum ground-level NO<sub>2</sub> concentrations,
- the name of the dispersion model used,
- a description of meteorological data used, and
- a terrain map of the study area.

#### **5.10.6.9 Alberta Environment Approval/Registration**

103) For facilities with total NO<sub>x</sub> emissions more than 16 kg/h and all Category C, D, and E gas plants that remove H<sub>2</sub>S using regenerative sweetening processes, the licensee must submit the AENV approval or registration number, if available. If the facility or amendment to the licence has not been registered or approved by AENV, the licensee must submit the following to demonstrate that it will meet the *Alberta Ambient Air Quality Objectives* prior to approval:

- a) documentation that confirms dispersion modelling was conducted in accordance with the *Air Quality Model Guideline*,
- b) the source parameters, locations, elevations, and NO<sub>x</sub> emission rates for all sources,
- c) predicted maximum ground-level NO<sub>2</sub> concentrations,
- d) the name of the dispersion model used,
- e) a description of meteorological data used, and
- f) a terrain map of the study area.

#### **5.10.6.10 Environmental Impact Assessment (EIA)**

No documentation required.

#### **5.10.6.11 *Historical Resources Act* Clearance**

- 104) Where applicable, the licensee must submit documentation showing that it received clearance from Alberta Culture and Community Spirit prior to submitting the facility licence application.

#### **5.10.6.12 ERCB Environmental Requirements**

- 105) The licensee must submit all documentation outlined in *IL 93-09*, if applicable.

#### **5.10.6.13 Working Interest Participant and Schedule 2.1 Requirements**

No documentation required.

### **5.11 Audit Documentation Requirements for Schedule 2.2: Gas Plants—Facilities**

- 106) For applications selected for audit review, licensees must submit the documents detailed below within 14 calendar days of notice of audit or within the time frame directed by the ERCB.
- 107) ERCB Facilities Applications must be able to determine from the audit documents that the applicant fulfilled all requirements to ensure regulatory compliance prior to filing the application.
- 108) For new Category C and D gas plants and all Category E applications, the applicant must submit the applicable audit documentation with the application for review.

The detailed list of audit documents below corresponds to the steps found in Schedule 2.2. For licence amendment applications, the licensee may submit only that audit documentation applicable to the amendment activity.

#### **5.11.1 Step 1: Identification**

No documentation required.

#### **5.11.2 Step 2: Total Recovered Products**

- 109) For gas processing, straddle, fractionation, and sulphur recovery plants, the licensee must submit

- a) a plant material balance for design conditions that matches the streams and equipment shown on the PFD and includes
  - i) maximum H<sub>2</sub>S content for both the inlet rate and the acid gas rate,
  - ii) design rates for the inlet and recovered products,
  - iii) maximum acid gas rate, and
  - iv) continuous sulphur emission rate; and
- b) an explanation of any differences between the applied-for rates and those contained in the plant material balance.

#### **5.11.3 Step 3: Technical Information—Sour Gas Proliferation**

- 110) For new Category C and D and all Category E gas plants, the licensee must submit documentation regarding the alternatives to construction, including
  - a) evaluation of the technical and economic feasibility of using or modifying existing infrastructure,
  - b) an assessment of the social and economic effects of the alternatives, and
  - c) design parameters and available capacity of existing Category C, D, and E gas plants that were considered.

#### **5.12 Audit Documentation Requirements for Schedule 2.3: H<sub>2</sub>S Information—Facilities**

- 111) For applications selected for audit review, licensees must submit the documents detailed below within 14 calendar days of notice of audit or within the time frame directed by the ERCB.
- 112) ERCB Facilities Applications must be able to determine from the audit documents that the applicant fulfilled all requirements to ensure regulatory compliance prior to filing the application.
- 113) For new Category C and D gas plants and all Category E applications, the applicant must submit the applicable audit documentation with the application for review.

The detailed list of audit documents below, corresponds to the steps found in Schedule 2.3. For licence amendment applications, the licensee may submit only that audit documentation applicable to the amendment activity.

##### **5.12.1 Step 1: Identification**

No documentation required.

##### **5.12.2 Step 2: Gas Treating and Processing Information**

- 114) For facilities where an H<sub>2</sub>S scavenger unit is proposed, the licensee must submit
  - a) a description of the H<sub>2</sub>S scavenger system proposed, and
  - b) the nature of the spent scavenger and its disposition.
- 115) For all facilities where the inlet H<sub>2</sub>S content is more than 0.01 mol/kmol, the licensee must submit a wellhead or inlet gas analysis representative of the facility's inlet stream(s).

- 116) For facilities with continuous sulphur emissions, the licensee must submit a breakdown of all sources that contribute to the total value (e.g., flare, produced water tanks).
- 117) For facilities where the sulphur inlet is greater than 1 t/d, the licensee must submit an explanation of how the facility meets the current sulphur recovery guidelines.

#### **5.12.3 Step 3: Technical Information—Setback Requirements**

##### **5.12.3.1 Setback Requirements**

- 118) The licensee must submit
  - a) the input parameters used to calculate the potential H<sub>2</sub>S release volume of the highest level of pipeline associated with the facility (inlet or outlet streams),
  - b) a pipeline map showing ESD and check valve locations, and
  - c) the pipeline licence and line number for the highest level of pipeline associated with the facility.

##### **5.12.3.2 Vapour Recovery**

- 119) For facilities where the inlet H<sub>2</sub>S is greater than 10 mol/kmol, the licensee must submit a description of the method proposed to control odours from storage tanks and other sources of vented gas, including the type of system.
- 120) For facilities where a product containing greater than 0.01 mol/kmol of H<sub>2</sub>S will be transported, the licensee must submit documentation that confirms that a method to control off-lease odours during the transport of fluids containing H<sub>2</sub>S gas is in place.

##### **5.12.3.3 SO<sub>2</sub> Emissions and Stack Design**

- 121) For facilities with continuous flaring/incineration where the inlet H<sub>2</sub>S is less than 10 mol/kmol, the licensee must submit the heating value of the gas stream for the flare/incinerator.
- 122) For facilities where the inlet H<sub>2</sub>S is greater than 10 mol/kmol, the licensee must submit
  - a) a schematic diagram or description of the flare/incinerator that must show a continuous pilot and/or automatic igniter, flame arrestor, and stack height,
  - b) for incinerators, the residence time and exit temperature, and
  - c) documentation that demonstrates that the AAAQO will be met for SO<sub>2</sub> emissions from continuous sources and from nonroutine events. The documentation must clearly show that dispersion modelling was conducted in accordance with the Alberta Air Quality Model Guideline and Directive 060 and should include (but not be limited to) the following:
    - i) the source parameters, locations, elevations, and SO<sub>2</sub> emission rates for all sources,
    - ii) predicted maximum ground-level SO<sub>2</sub> concentrations,
    - iii) the name of the dispersion model used,

- iv) a description of meteorological data used, and
- v) a terrain map of the study area.

**5.13 Audit Documentation Requirements for Schedule 2.4: Compressors/Pumps—Facilities**

- 123) For applications selected for audit review, licensees must submit the documents detailed below within 14 calendar days of notice of audit or within the time frame directed by the ERCB.
- 124) ERCB Facilities Applications must be able to determine from the audit documents that the applicant fulfilled all requirements to ensure regulatory compliance prior to filing the application.
- 125) For new Category C and D gas plants and all Category E applications, the applicant must submit the applicable audit documentation with the application for review.

The detailed list of audit documents below corresponds to the steps found in Schedule 2.4. For licence amendment applications, the licensee may submit only that audit documentation applicable to the amendment activity.

**5.13.1 Step 1: Identification**

No documentation required.

**5.13.2 Step 2: Compressors and Step 3: Pumps**

- 126) For facilities with compressors/pumps, the licensee must submit manufacturer's specifications for the proposed compressor that confirm emission ratings, unit size, and driver type.

Table 5.6 provides a summary of the documents required for audit submission. Refer to the sections cited for full details. The ERCB reserves the right to request the submission of additional information not listed below if it would assist in the review of an application. If a nonroutine application is proceeding to a hearing, the ERCB may require that the applicant submit the entire audit package for review.

**Table 5.6. Facility application audit checklist**

Section No.	Y	N	N/A	Audit Documents
<b>SCHEDULE 2: Facility Licence Application</b>				
<b>5.10.2 Step 2: Participant Involvement Requirements</b>				
<b>5.10.2.1 Participant Involvement Map Requirements</b>				
				Map
<b>5.10.2.2 Industry Notification Requirements</b>				
				Record of contact with other industry parties, including name, address, telephone number
				Copies of all correspondence between parties
				Minutes of meetings held, including <ul style="list-style-type: none"> <li>• Date of meeting</li> <li>• Meeting notice and/or invitation</li> <li>• Invitation list</li> <li>• Name, address, and phone number of all meeting participants</li> </ul>
				Copies of the project information presented at meetings or otherwise distributed
<b>5.10.2.3 Personal Consultation and Notification Requirements</b>				
				Participant Involvement Summary
<b>5.10.2.4 Confirmation of Nonobjection</b>				
				Freehold lease agreement
				Crown disposition
				Signed information document
				Documented verbal nonobjection
				Written agreement to proceed to Surface Rights Board
<b>5.10.2.5 Information Packages</b>				
				Applicant's project-specific information package
				List of all documents provided to participants
				Documented refusal of information packages
<b>5.10.2.6 Resolved Concerns and Objections</b>				
				A record and explanation of any concerns/objections received that were resolved
				Documentation demonstrating resolution of the concerns/objections received
<b>5.10.2.7 Sour Gas Planning and Proliferation</b>				
				For cases where there are residents located within the EPZ of the facility, the applicant must submit the assessment of existing infrastructure required by Section 8.3.2
				The additional project-specific information package details identified in Section 8.3.2
<b>5.10.3 Step 3: Emergency Response Planning</b>				
				Statement confirming that a corporate or specific plan will be in place prior to operation
<b>5.10.4 Step 4: Type of Application</b>				
				For Category B facilities, a representative gas analysis
<b>5.10.5 Step 5: Facility Design Criteria</b>				
				Written description of the proposed process scheme at the facility
				Process flow diagram
				For custom rating facilities, an inlet analysis for oil, water, and solids

(continued)

**Table 5.6. Facility application audit checklist (continued)**

Section No.	Y	N	N/A	Audit Documents
				Breakdown of the sources of NO <sub>x</sub> and CO <sub>2</sub> emissions
				Manufacturer specifications to confirm NO <sub>x</sub> and CO <sub>2</sub> emissions
				Diagrams to demonstrate that stack height requirements have been met
				List of all sources of continuous flaring, incineration, and venting
				The results of the ground-level radiant heat intensity calculation for the flare/incinerator
<b>5.10.6 Step 6: Technical Information</b>				
<b>5.10.6.1 Equipment Spacing</b>				
				Site-specific plot plan
				Indication of whether ESD valves are automated or manual control
				For facilities handling heavy oil, a representative oil analysis
<b>5.10.6.3 Gas Conservation</b>				
				Economic evaluation of gas conservation and decision tree analysis or an explanation of why the evaluation cannot be completed until the well test is complete, and a description of the plans to complete the evaluation after well testing
				For gas processing plants with continuous flaring/incineration, documentation to confirm that the gas conservation requirements of <i>Directive 060</i> , Section 5.1, have been met
<b>5.10.6.4 Noise Guidelines</b>				
				A copy of the noise impact assessment
<b>5.10.6.5 Storage Requirements</b>				
				List of material stored and size and type of storage tank(s) proposed
				Description of design and construction, leak detection, secondary containment, and weather protection for each tank proposed
<b>5.10.6.7 Production Measurement Requirements</b>				
				A list and location of each meter proposed
				Documentation to confirm that the measurement/estimation procedures for flared, incinerated, and vented volumes meet the requirements of <i>Directive 060</i>
<b>5.10.6.8 NO<sub>x</sub> Emissions</b>				
				For facilities where the NO <sub>x</sub> emissions are less than 16 kg/h, documentation or a schematic diagram for each source stack demonstrating that the stack height is 1.2 times the peak building height
				If modelling was conducted, documents that clearly show that dispersion modelling was conducted in accordance with the Alberta Air Quality Model Guideline - the source parameters, locations, elevations, and NO <sub>x</sub> emission rates for all sources - predicted normal and maximum ground-level NO <sub>x</sub> concentrations - the name of the dispersion model used - a description of meteorological data used - a terrain map of the study area

(continued)

**Table 5.6. Facility application audit checklist (continued)**

Section No.	Y	N	N/A	Audit Documents
<b>5.10.6.9 Alberta Environment Approval/Registration</b>				
				A copy of the AENV approval or registration number if available
				If approval or registration is not completed, - documents that clearly show that dispersion modelling was conducted in accordance with the <i>Alberta Air Quality Model Guideline</i> - the source parameters, locations, elevations, and NOx emission rates for all sources - predicted normal and maximum ground-level NOx concentrations - the name of the dispersion model used - a description of meteorological data used - a terrain map of the study area
<b>5.10.6.11 Historical Resources Act (Freehold land only)</b>				
				Alberta Culture and Community Spirit approval dated prior to application
<b>5.10.6.12 ERCB Environmental Requirements</b>				
				All documentation outlined in <i>IL 93-09</i> , if applicable.
<b>5.11 SCHEDULE 2.2: Gas Plants—Facilities</b>				
<b>5.11.2 Step 2: Total Recovered Products</b>				
				A plant material balance
				An explanation of any differences between design rates applied for and those from the material balance
<b>5.11.3 Step 3: Technical Information</b>				
				For new Category C, D, and E plants, the results of the feasibility evaluation of existing plants that was conducted
<b>5.12 SCHEDULE 2.3: H<sub>2</sub>S Information—Facilities</b>				
<b>5.12.2 Step 2: Gas Treating and Processing Information</b>				
				Description of the H <sub>2</sub> S scavenger system proposed, nature of spent chemical, and its disposition
				Wellhead or inlet gas analysis representative of facility inlet
				Breakdown of all sources that contribute to the continuous sulphur emissions
				Explanation of how the facility meets the current sulphur recovery requirements
<b>5.12.3 Step 3: Technical Information</b>				
<b>5.12.3.1 Setback Requirements</b>				
				Input parameters used to calculate the potential H <sub>2</sub> S release volume of the highest level of pipeline associated with the facility
				Pipeline map showing ESD and check valve locations
				Pipeline licence and line number for the pipeline that determined the required setback
<b>5.12.3.2 Vapour Recovery</b>				
				For facilities with H <sub>2</sub> S > 10 mol/kmol, a description of the method proposed to handle stock tank vapours so that proper combustion occurs
				For facilities with H <sub>2</sub> S > 0.01 mol/kmol, a description of how off-lease odours will be controlled during the transfer and transport of fluids containing H <sub>2</sub> S
<b>5.12.3.3 SO<sub>2</sub> Emissions and Stack Design</b>				
				Schematic diagram or description of the flare/incinerator
				Documentation that demonstrates the AAAQO will be met for SO <sub>2</sub> emissions from continuous sources and from nonroutine events. The documentation must clearly show that dispersion modelling was conducted as per the <i>Alberta Air Quality Model Guideline</i> and <i>Directive 060</i>

(continued)

**Table 5.6. Facility application audit checklist (concluded)**

Section No.	Y	N	N/A	Audit Documents
				The source parameters, locations, elevations, and SO <sub>2</sub> emission rates for all sources
				Predicted maximum ground-level SO <sub>2</sub> concentrations
				Name of the dispersion model used
				Description of meteorological data used
				Terrain map of the study area
				For incinerators, the residence time and exit temperature
				For facilities with less than 10 mol/kmol H <sub>2</sub> S, the heating value of the gas stream for the flare/incinerator
<b>5.13 SCHEDULE 2.4: Compressors/Pumps—Facilities</b>				
<b>5.13.2 Step 2: Compressors and Step 3: Pumps</b>				
				Manufacturer specifications to confirm emission ratings, type of driver, and size of compressor/pump

Table 5.7 provides a summary of documents required for nonroutine application submission by step and question. Please refer to the questions specified in Sections 5.14.1 through 5.14.5 for full details.

**Table 5.7. Facility application nonroutine checklist**

Section No.	Y	N	N/A	Nonroutine Submissions
<b>SCHEDULE 2: Facility Licence Application</b>				
<b>Step 2: Participant Involvement Requirements</b>				
<b>Question 1: Personal consultation, confirmation of nonobjection, and notification requirements have been met: Public</b>				
				The participant involvement summary of all personal consultation and notification that have been completed
				Name, address, telephone number, and legal land description of participants for which personal consultation and notification requirements have not been completed
				Detailed explanation of why all personal consultation and nonobjection requirements cannot be completed
				Detailed explanation of why all notification requirements cannot be completed
				An explanation of how you would like the ERCB to proceed with this application
<b>Question 1: Industry</b>				
				Record of contact with industry parties conducted
				Copies of correspondence between parties
				Minutes of meetings held
				Copies of information distributed
				A summary of parties for which industry notification has not occurred
				A detailed explanation of why all industry notification requirements were not completed
				An explanation of how you want the ERCB to proceed with your application
<b>Question 2: There are outstanding objection/concerns related to this application</b>				
				Name, address, telephone number, and legal land description of participant(s) with outstanding concerns/objections
				Approximate distance from the project to the land and residence, if applicable, of participant(s) with outstanding concerns/objections

(continued)

**Table 5.7. Facility application nonroutine checklist (continued)**

Section No.	Y	N	N/A	Nonroutine Submissions
				Copy of the written concern/objection (or summary of issues if not available)
				A chronology of the participant involvement program conducted with the party
				A discussion of steps taken to mitigate the outstanding concerns/objection
				Copy of the applicant's project-specific information package
				List of other documents distributed
				Documentation in support of the Battle Lake application requirements (Section 8)
				Explanation of how you want the ERCB to proceed with your application
				If there are residents within the EPZ, you must also attach <ul style="list-style-type: none"> <li>• the assessment of existing infrastructure required by Section 8.3.2</li> <li>• the updated expanded project-specific information package, as described in Section 8.3.2</li> <li>• a copy of an area plan described in Section 8.3.3 if it was completed</li> </ul>
<b>Step 6: Technical Information</b>				
<b>Question 2: Equipment spacing requirements will be met</b>				
				Detailed explanation of what equipment will not meet the requirements and why
				Description of fluids involved and all sources of gaseous vapours
				Topographic map (if terrain is the cause)
				Description of how safety will not be compromised by a relaxation from the requirement, including safety assessment and response time for call-out
<b>Question 3: The facility will meet all current and applicable engineering and safety standards</b>				
				Detailed explanation of nonconformance with engineering and safety standard
<b>Question 4a: If YES, gas flaring, incinerating, or venting will comply with the requirements of Directive 060</b>				
				Description of exemption being proposed and a detailed explanation of reasons
				Explanation that includes plans to complete gas conservation evaluation (if not completed prior to application)
<b>Question 5: The facility meets ERCB noise control requirements (Directive 038)</b>				
				A copy of the noise impact assessment
				An explanation of why the noise requirements will not be met
				Discussion of the mitigative measures proposed or a discussion of why mitigative measures are not practical
				Map showing proximity of residents
<b>Question 6: ERCB storage requirements will be met (Directive 055)</b>				
				Explanation of why the storage requirements will not be met, and a description of alternative storage methods
				Discussion of how the environment will not be compromised by a relaxation of the requirements
<b>Question 8: ERCB production measurement requirements will be met</b>				
				Explanation of why measurement will not meet the ERCB requirements and a discussion of the proposed alternative

(continued)

Table 5.7. Facility application nonroutine checklist (continued)

Section No.	Y	N	N/A	Nonroutine Submissions
<b>Question 9: NO<sub>x</sub> air emissions meet the Alberta Ambient Air Quality Objectives</b>				
				Explanation of why the Alberta Ambient Air Quality Objectives will not be met
				Documents confirming that dispersion modelling was conducted in accordance with the Alberta Air Quality Model Guideline, including - the source parameters, locations, elevations, and NO <sub>x</sub> emission rates for all sources - predicted normal and maximum ground-level NO <sub>2</sub> concentrations - the name of the dispersion model used - a description of meteorological data used - a terrain map of the study area
<b>Question 14a: If YES, clearance has been granted for the facility site</b>				
				Explanation as to why Alberta Culture and Community Spirit has not provided clearance
<b>Question 16: The proposed facility meets the ERCB environmental requirements</b>				
				A detailed explanation of why the facility does not meet ERCB environmental requirements and what measures will be in place to ensure the facility will not have a negative impact on the environment
<b>SCHEDULE 2.2: Gas Plants—Facilities</b>				
<b>Step 3: Technical Information</b>				
<b>Question 1: A sour gas proliferation review has been conducted in accordance with ID 2001-03</b>				
				A detailed explanation as to why the requirements cannot be met
<b>SCHEDULE 2.3: H<sub>2</sub>S Information—Facilities</b>				
<b>Step 2: Gas Treating and Processing Information</b>				
<b>Acid gas disposal method: Other</b>				
				Description of the proposed alternative acid gas disposal process and supporting technical documents/papers discussing the method
<b>Sulphur recovery process: Other</b>				
				Description of the proposed process, including a supporting process flow diagram and material balance
				Technical documents/papers discussing the process
				Explanation of how the proposed process will meet the sulphur recovery requirements
				Available correspondence from Alberta Environment related to the process
				Results and description of the process in operation at another facility
<b>Step 3: Technical Information</b>				
<b>Question 1: Sour setback requirements have been met</b>				
				Detailed explanation of why the setbacks cannot be met
<b>Question 2: A method to recover vapours will be implemented</b>				
				Detailed explanation of why vapour recovery will not be installed
				Discussion of mitigative measures to ensure that off-lease odours do not occur
<b>Question 3: SO<sub>2</sub> air emissions meet the Alberta Ambient Air Quality Objectives</b>				
				Schematic diagram or description of the flare/incinerator
				The source parameters, locations, elevations, and SO <sub>2</sub> emission rates for all sources
				Predicted maximum ground-level SO <sub>2</sub> concentrations

(continued)

**Table 5.7. Facility application nonroutine checklist (concluded)**

Section No.	Y	N	N/A	Nonroutine Submissions
				Name of the dispersion model used
				Description of meteorological data used
				Terrain map of the study area
				For facilities with less than 10 mol/kmol H <sub>2</sub> S, the heating value of the gas stream for the flare/incinerator
				Description of the magnitude and frequency of potential SO <sub>2</sub> exceedance and information on situations leading to SO <sub>2</sub> exceedance (operational scenarios, meteorological conditions)

New Licence

Licence Amendment

Temporary Facility

Maximum H<sub>2</sub>S Content of Inlet Gas: \_\_\_\_\_ ppm      mol/kmol      %

#### Licence Amendment (LA) Type

1-Change category and/or type

7-Add regenerative sweetening

12-Add new flare/incinerator stack

2-Install/remove compression

8-Add nonregenerative sweetening

13-Increase sulphur recovery efficiency

3-Change maximum licensed inlet rates

9-Change maximum continuous sulphur emissions

14-Decrease sulphur recovery efficiency

4-Change H<sub>2</sub>S content of inlet gas

10-Extend expiry date

15-Change acid gas disposal method

5-Install/remove injection/disposal pumps

11-Change status to permanent

16-Degrandfather sulphur recovery facility

6-Change product/product recovery rates

Total Inlet Rates	Raw Gas _____ $10^3 \text{ m}^3/\text{d}$	Oil/Bitumen _____ $\text{m}^3/\text{d}$	Condensate _____ $\text{m}^3/\text{d}$	Water _____ $\text{m}^3/\text{d}$	Sulphur _____ t/d
Total Continuous Emissions Rates	NO <sub>x</sub> _____ kg/h	CO <sub>2</sub> _____ t/d	Flaring/Incineration _____ $10^3 \text{ m}^3/\text{d}$	Venting _____ $10^3 \text{ m}^3/\text{d}$	

**6. TECHNICAL INFORMATION**

1. The proposed facility is part of an experimental, primary, or commercial crude bitumen scheme ..... YES  NO

1a. If YES, Scheme Approval No. \_\_\_\_\_

2. Equipment spacing requirements will be met ..... YES  NO

3. The facility will meet all current and applicable engineering and safety standards ..... YES  NO

4. Gas will be continuously flared, incinerated, or vented ..... YES  NO

4a. If YES, the gas flaring, incinerating, or venting will comply with the requirements of *Directive 060* ..... YES  NO

5. The facility meets the ERCB *Noise Control* requirements (*Directive 038*) ..... YES  NO

6. ERCB storage requirements will be met (*Directive 055*) ..... YES  NO

7. ERCB oilfield waste management requirements will be met (*Directive 058*) ..... YES

8. ERCB production measurement requirements will be met ..... YES  NO

9. NOx air emissions meet the *Alberta Ambient Air Quality Objectives* ..... YES  NO

10. Approval from or registration with Alberta Environment is required ..... YES  NO

11. Alberta Environment requires an environmental impact assessment ..... YES  NO

12. The proposed facility will include compressors (new licence only). If Yes, attach completed Schedule 2.4. ..... YES  NO

13. The proposed facility will include pumps (new licence only). If Yes, attach completed Schedule 2.4. ..... YES  NO

14. The proposed facility site requires *Historical Resources Act* clearance (Freehold land only) ..... YES  NO

14a. If YES, clearance has been granted for the facility site ..... YES  NO

15. The licensee is the only working interest participant. If NO, attach a completed Schedule 2.1 ..... YES  NO

16. The facility meets the ERCB environmental requirements ..... YES  NO

## 5.14 How to Complete Facility Licence Application Schedules

### 5.14.1 How to Complete Schedule 2: Facility Licence Application

**Date** Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).

**Applicant's Reference** Enter your own file reference in the designated area (optional).

#### Step 1: Identification

**Applicant BA Code** Enter the 4-digit business associate (BA) code issued to your company.

**Applicant Name** Enter the full corporate name of the applicant assigned the BA code.

#### Step 2: Participant Involvement Requirements

*If you check a **BOLD** response, you must attach supporting information.*

**1. Personal consultation, confirmation of nonobjection, and notification requirements have been met:** YES means that all applicable requirements as outlined in Table 5.1, the participant involvement requirements of Section 2, and Section 5.8 have been met prior to application submission.

**NO** means that due to exceptional circumstances, all applicable requirements as cited above have not been met. This includes being unable to contact a party or receive confirmation of nonobjection, as required.

If **NO**, you must attach

- the participant involvement summary of all personal consultation and notification that has been completed;
- the name, address, telephone number, and legal land description of participants for which personal consultation and notification requirements have not been completed;
- a detailed explanation of why all personal consultation and nonobjection requirements cannot be completed;
- a detailed explanation of why all notification requirements cannot be completed; and
- an explanation of how you would like the ERCB to proceed with this application.

The ERCB will review the circumstances and decide if an exemption is warranted.

**Industry**

YES means that all operators of similar facilities and all licensees of unconnected wells within your area of investigation have been notified in accordance with the participant involvement requirements of Section 2, Section 5.8, Table 5.4, and the proliferation requirements of Section 5.9.3 prior to application submission.

**NO** means that due to exceptional circumstances, all applicable requirements cited above have not been met.

If **NO**, you must attach

- a record of contact with industry parties conducted;
- copies of correspondence between parties;
- minutes of meetings held;
- copies of information distributed;
- a summary of parties for which industry notification has not occurred;
- a detailed explanation of why all industry notification requirements were not completed; and
- an explanation of how you would like the ERCB to proceed with this application.

The ERCB will review the circumstances and decide if an exemption is warranted.

**2. There are outstanding concerns/objections related to this application.**

**YES** means that there are outstanding public and/or industry concerns/objections.

If **YES**, you must attach

- name, address, telephone number, and legal land description of the participant with outstanding concerns/objections;
- approximate distance from the project to the land and residence, if applicable, of the participant(s) with outstanding concerns/objections;
- a copy of written concerns/objections received; if not available, a summary of issues;
- a chronology of the participant involvement program conducted with the party;
- steps taken to mitigate the outstanding concerns/objections;
- a copy of the project-specific information package provided;
- a list of other documents distributed; and
- a discussion of how you would like the ERCB to proceed with your application.

If there are residents within the EPZ, you must also attach

- the assessment of existing infrastructure required by Section 8.3.2;
- the updated, expanded project-specific information package, as described in Section 8.3.2; and
- a copy of an area plan described in Section 8.3.3 if it was completed.

**YES** also means the proposed facility is located within the Tier 1 area of Battle Lake and the documentation required by Section 8 is attached.

The ERCB will review only the concern/objection identified and decide if an exemption is warranted.

**NO** means there are no outstanding public and/or industry concerns/objections.

<b>3a. Distance to nearest surface development</b>	Enter the distance from the edge of the facility lease to the nearest surface development in kilometres (km) to 2 decimal places.  If there is no surface development within the EPZ, a distance to the nearest town, village, or urban centre may be used. Where there is no EPZ, a search should be done to at least 1.5 km; if there is no surface development within this distance, enter 1.5 km on the schedule.
<b>3b. Distance to nearest residence</b>	Enter the distance from the edge of the facility lease to the nearest residence in kilometres (km) to 2 decimal places.  If there are no residences within the EPZ, a distance to the nearest town, village, or urban centre may be used. Where there is no EPZ, a search should be done to at least 1.5 km; if there are no residences within this distance, enter 1.5 km on the schedule.

### **Step 3: Emergency Response Planning**

---

<b>1. The applicant will meet ERCB requirements for emergency response planning.</b> (Section 5.9.1)	YES means that the corporate or specific emergency response plan will meet the requirements of <i>Directive 071</i> .  NO means that a new emergency response plan is not required.  Do not complete this question for a Category B facility.
<b>2a. The facility requires a new emergency response plan.</b>	YES means that a new emergency response plan is required.  NO means that a new emergency response plan is not required.  Do not complete this question for a Category B facility.
<b>2b. The facility requires an amendment to an existing emergency response plan.</b>	YES means that supplementary information will be submitted for an existing emergency response plan to include this facility.  NO means that an existing emergency response plan will not be amended.  Do not complete this question for a Category B facility.

### **Step 4: Application Type**

---

<b>Category Type</b>	For each Schedule 2 attached, enter the applicable category type from Table 5.1.
<b>Description</b>	Enter the facility description from Table 5.1.
<b>Temporary Facility</b>	Check this box if you are applying for a facility that will operate for less than 1 year or if you are filing a licence amendment application to extend the licence expiry date of an existing temporary facility licence for up to an additional 6 months from the original licensed date.
<b>Maximum H<sub>2</sub>S Content of Inlet Gas</b>	Enter the maximum H <sub>2</sub> S content of the raw inlet gas in parts per million (ppm), moles per kilomole (mol/kmol) to 3 decimal places, or percentage (%) to 4 decimal places. For facilities with multiple inlet streams, record the H <sub>2</sub> S value from the stream with the highest H <sub>2</sub> S content. The highest H <sub>2</sub> S content must be based either on pipelines entering the facility or on any well associated with the raw gas inlet.

<b>Licence Amendment (LA) Type</b>	Use this section if you are amending an existing ERCB licensed facility. From the following list you may check all that apply; however, only certain amendment combinations will be permitted on one Schedule 2 application. Table 5.3: Category Type Amendment Combinations describes the allowable licensee amendment combinations.
	For all licence amendments listed below, full participant involvement requirements must be met or the application must be filed as nonroutine. This includes those amendments described as being not mandatory.
	Compressors less than 75 kW that were installed previously as an exempt activity (Section 5.5.3) should be captured on Schedule 2.4 the next time an amendment application for the facility is required.
<b>1 Change Category and/or Type</b>	Check this box if you are applying to change the category and/or type of an existing licensed facility as described in Table 5.1. Depending on the amended category/type applied for, you may be required to complete Schedules 2.2, 2.3, and/or 2.4.
<b>2 Install/Remove Compression</b>	Check this box if you are applying to install and/or remove compression at an existing licensed facility. The removal of compression is not a mandatory application but will be processed at the applicant's request. You must also complete Schedule 2.4.
	Compressors less than 75 kW that were installed previously as an exempt activity (Section 5.5.3) should be captured on Schedule 2.4 the next time an amendment application for the facility is required.
<b>3 Change Maximum Licensed Inlet Rates</b>	Check this box if you are applying to change the maximum licensed inlet rates of an existing licensed facility. The reduction of licensed inlet rates is not a mandatory application but will be processed at the applicant's request.
<b>4 Change H<sub>2</sub>S Content of Inlet Gas</b>	Check this box if you are applying to change the maximum H <sub>2</sub> S content of the inlet gas of an existing licensed Category C, D, or E facility without a category and/or type change. You must also complete Schedule 2.3 for all Category C, D, and E facilities. The reduction of licensed H <sub>2</sub> S content is not a mandatory application but will be processed at the applicant's request.
<b>5 Install/Remove Injection/Disposal Pumps</b>	Check this box if you are applying to install and/or remove injection/disposal pumps at an existing licensed facility. The removal of injection/disposal pumps is not a mandatory application but will be processed at the applicant's request. You must also complete Schedule 2.4.
<b>6 Change Product/Product Recovery Rates</b>	Check this box if you are applying to change the product/product recovery rates of an existing licensed gas processing plant. You must also complete Schedule 2.2. The reduction of product recovery rates is not a mandatory application but will be processed at the applicant's request. Also, the increase in product recovery rates at a Category B gas plant is not a mandatory application but will be processed at the applicant's request.

<b>7 Add Regenerative Sweetening</b>	Check this box if you are applying to add a regenerative sweetening system to an existing licensed gas processing plant where there is no change to category or type. You must also complete Schedule 2.2 for Category B, C, D, and E gas processing plants and Schedule 2.3 for Category C, D, and E gas processing plants.
<b>8 Add Nonregenerative Sweetening</b>	Check this box if you are applying to add a nonregenerative sweetening system to an existing licensed Category C, D, or E facility. You must also complete Schedule 2.3.
<b>9 Change Maximum Continuous Sulphur Emissions</b>	Check this box if you are applying to change the maximum continuous sulphur emission rate of an existing licensed Category C, D, or E facility. You must also complete Schedule 2.3. The reduction in sulphur emissions is not a mandatory application but will be processed at the applicant's request.
<b>10 Extend Expiry Date</b>	Check this box if you are applying to extend the expiration date of a temporary facility licence or a permanent facility licence where construction has not commenced. A licence amendment application to extend the expiry date may only be submitted once and may not be combined with other types of licence amendment applications.
<b>11 Change Status to Permanent</b>	Check this box if you are applying to change the status of an existing temporary facility licence to become a permanent licensed facility.
<b>12 Add New Flare/Incinerator Stack</b>	Check this box if you are applying to add a new flare/incinerator stack at an existing facility.
<b>13 Increase Sulphur Recovery Efficiency</b>	Check this box if you are applying to increase only the sulphur recovery efficiency at an existing sulphur recovery facility or acid gas injection facility. You must also complete Schedule 2.3.
<b>14 Decrease Sulphur Recovery Efficiency</b>	Check this box if you are applying to decrease the sulphur recovery efficiency at an existing sulphur recovery facility or acid gas injection facility. You must also complete Schedule 2.3.
<b>15 Change Acid Gas Disposal Method</b>	Check this box if you are applying to change the acid gas disposal method at an existing licensed Category C, D, or E gas plant. You must also complete Schedule 2.3.
<b>16 Degrandfather Sulphur Recovery Facility</b>	Check this box if you are applying to degrandfather an existing licensed sulphur recovery facility to meet the requirements of ID 2001-03: <i>Sulphur Recovery Guidelines for the Province of Alberta</i> . You must also complete Schedule 2.3.
<b>Location</b>	Enter the surface location of the facility where construction will occur using the Dominion Land Survey system.  If this is a licence amendment to a previously approved facility, enter the location exception (LE) assigned on the previous licence. Leave LE blank for all new facility applications.
<b>Latitude (NAD 83)</b>	Enter the latitude in decimals of degrees to 6 decimal places, based on the North American Datum 1983 (NAD 83), for the location of the entrance to the facility.

<b>Longitude (NAD 83)</b>	Enter the longitude in decimals of degrees to 6 decimal places, based on NAD 83, for the location of the entrance to the facility.
<b>Existing Facility Licence No.</b>	Enter the existing ERCB facility licence number for the facility being amended.  If you are changing a temporary facility to permanent status, enter the facility licence number issued for the temporary operation.
<b>Linking Facility Licence No. (Section 5.9.2)</b>	Enter the facility licence number for the facility that receives and reports the production from this nonreporting facility. This also applies to temporary nonreporting facilities. Do not indicate a linking facility number if this site is a reporting facility.
<b>Direct to Sales</b>	Check the "Direct to Sales" box if production from a Category B or C compressor station is going directly into a sales gas pipeline.
<b>Temporary/Extended Facility Expiry</b>	Enter the date by which the temporary facility will be decommissioned.  For new licence applications, this date must not be more than 1 year from the date of application. You may file a licence amendment application to extend the expiry date of a temporary licence or to extend the expiration of a permanent facility licence up to an additional 6 months.
<b>ERCB-Designated Field or Strike Area</b>	Enter the ERCB-designated field or strike area in which the facility is or will be located.  If no field or strike area has been designated, leave this blank.  Field and strike area information may be obtained on the ERCB Web site <a href="http://www.ercb.ca">www.ercb.ca</a> .

#### **Step 5: Design Criteria**

*For facility licence amendments, your answers should represent the total design rates associated with all on-site equipment for the location identified and should not represent only that equipment associated with the licence amendment (Section 5.9.4).*

<b>Total Inlet Rates</b>	Enter the maximum daily design rates under normal operating conditions for the facility inlet to 2 decimal places for raw gas and sulphur inlets, and one decimal place for oil/bitumen, condensate, and water inlets. The total sulphur inlet rate entered for Category C, D, or E facilities must be greater than 0.00. If an inlet product is not applicable, enter 0.
<b>Total Continuous Emissions Rates</b>	<i>Your answers should represent the total design amounts associated with all on-site equipment for the location identified (Section 5.9.7).</i>
<b>NO<sub>x</sub></b>	Enter the total amount of NO <sub>x</sub> emissions from all sources at the facility site in kilograms per hour (kg/h) to 2 decimal places. If less than 0.01 kg/h, enter 0.  This value should include NO <sub>x</sub> from internal combustion reciprocating engines (gas or liquid fueled), gas/liquid fired turbines and combustion heaters, boilers and steam generating units (gas, liquid or solid fueled), and sulphur recovery unit incinerator stacks.  This value should not include NO <sub>x</sub> from flare stacks.

<b>CO<sub>2</sub></b>	Enter the total amount of CO <sub>2</sub> emissions from all sources at the facility site in tonnes per day (t/d) to 2 decimal places. If less than 0.01 t/d, enter 0. For facilities operating a sweetening unit for the purpose of CO <sub>2</sub> removal, record the volume of CO <sub>2</sub> vented from that operation.  This value should not include CO <sub>2</sub> from flare stacks.
<b>Flaring/Incineration</b>	Enter the maximum continuous flaring/incineration rate in thousands of cubic metres per day ( $10^3 \text{ m}^3/\text{d}$ ) to 2 decimal places, including all sources on site where gas is burned in a flare or incinerator. You must enter 0.00 for facilities with no continuous flaring.  This value should include all sources of flash gas and/or tank vapour streams that are associated with continuous flaring/incineration during normal operations.
<b>Venting</b>	This value should not include fuel gas used for header purge, flare combustion management, or pilot fuel, volumes attributed to emergency or maintenance flaring, or volumes associated with sulphur recovery tail gas flaring/incineration.  Enter the maximum continuous venting rate in $10^3 \text{ m}^3/\text{d}$ to 2 decimal places, including that from all sources on site where gas is vented. You must enter 0.00 for facilities with no continuous venting.  This value should not include volumes attributed to emergency or maintenance venting.

#### **Step 6: Technical Information**

*If you check a **BOLD** response, you must attach supporting information.*

**1. The proposed facility is part of an experimental, primary, or commercial crude bitumen scheme.**

YES means that the proposed facility is part of an approved experimental, primary, or commercial crude bitumen scheme.  
  
NO means that the proposed facility is not part of an approved experimental, primary, or commercial crude bitumen scheme.  
  
Surface facilities associated with an experimental, primary, or commercial crude bitumen scheme must have a scheme approval prior to the *Directive 056* application.

**1a. If YES, Scheme Approval No.**

Only complete this question if you answered YES to question 1 above.  
  
If YES, enter the scheme approval number required in the space provided.

**2. Equipment spacing requirements will be met. (Section 5.9.10)**

YES means that the facility design and construction will meet the equipment spacing requirements detailed in the *Oil and Gas Conservation Regulations (OGCR)*, Part 8 (including proximity to a water body), and as required by *Directive 060*.  
  
NO means that due to exceptional circumstances, all applicable requirements cited above have not been met in the facility design.

**If NO**, you must attach

- a detailed explanation of what equipment will not meet the requirements and why;
- a description of fluids involved and all sources of gaseous vapours;
- a topographic map (if terrain is the cause); and
- a description of how safety will not be compromised by a relaxation from the requirement, including a safety assessment and response time for call-out.

**If NO** and the spacing issue is facility equipment within 100 m from a water body, you must attach

- a discussion of the preventive measures that will be employed at the facility to minimize the risk of a spill occurring, and in the event of a spill, the preventive measures for ensuring that the spill does not reach the water body;
- a description of the proposed equipment, tanks, and piping that will be located less than 100 m from the water body and the fluids involved;
- a description of the types of automatic controls that will be installed (these devices should also be identified on the process flow diagram required for submission with all facility applications);
- a detailed survey plan that clearly identifies the facility location and the distance to the associated water body; and either
- the licensee's commitment to construct and maintain a berm around the perimeter of the equipment that will prevent any spill from reaching the water body. This berm should not be confused with the secondary containment requirements set out in *Directive 055*; or
- a description of an alternative method or operating condition that would demonstrate how the water body is protected.

Additionally, if the proposed facility site is located *within* a water body, the licensee must submit documentation confirming that AENV has no concerns about the development of the site

The ERCB will review the circumstances and decide if an exemption is warranted.

**3. The facility will meet all current and applicable engineering and safety standards.**

**YES** means that the facility is covered by the current engineering and safety standards and it will meet all applicable CSA, ASME, and ABSA requirements.

**NO** means that due to exceptional circumstances, all applicable engineering and safety requirements cited above have not been met in the facility design.

**If NO**, you must attach a detailed explanation of nonconformance with safety and engineering standards.

The ERCB will review the circumstances and decide if an exemption is warranted.

<b>4. Gas will be continuously flared, incinerated, or vented.</b> (Section 5.9.7)	YES means that gas produced at the facility will be continuously flared, incinerated, or vented under normal operating conditions.
<b>4a. If YES, the gas flaring, incinerating, or venting will comply with the requirements of Directive 060.</b>	NO means that the gas produced at the facility will be conserved or that this is a Category E facility.
	Only complete this question if you answered YES to question 4 above.
	YES means that the applicant intends to comply with performance standards defined in <i>Directive 060</i> , Sections 7 and 8, and has completed an economic evaluation of conserving the continuous flared, incinerated, or vented gas, as described in Section 2 of <i>Directive 060</i> .
	<b>NO</b> means that you are requesting an exemption from <i>Directive 060</i> requirements and/or have not completed an economic evaluation of gas conservation.
	If <b>NO</b> , you must attach
	<ul style="list-style-type: none"> <li>• a description of the exemption being proposed and a detailed explanation of reasons</li> <li>• If you have not completed an evaluation of gas conservation, you must attach an explanation that includes plans to complete the evaluation when sufficient information is available.</li> </ul>
	The ERCB will review the circumstances and decide if an exemption is warranted.
<b>5. The facility meets the ERCB Noise Control requirements (<i>Directive 038</i>).</b> (Section 5.9.12)	YES means that a noise impact assessment has been conducted and used in site selection and facility design, and it indicates that the facility will operate within the guidelines in <i>Directive 038</i> or that there is no significant noise-generating equipment at this facility.
	<b>NO</b> means that due to exceptional circumstances, all applicable requirements cited above have not been met.
	If <b>NO</b> , you must attach
	<ul style="list-style-type: none"> <li>• the noise impact assessment,</li> <li>• an explanation of why the noise requirements will not be met,</li> <li>• a discussion of mitigative measures proposed or a discussion of why mitigative measures are not practical, and</li> <li>• a map showing proximity of residents.</li> </ul>
	The ERCB will review the circumstances and decide if an exemption is warranted.
<b>6. ERCB storage requirements will be met (<i>Directive 059</i>).</b>	YES means that the facility design and operation will meet the storage requirements in <i>IL 84-11</i> , <i>IL 94-06</i> , and <i>Directive 055</i> . This also applies to sulphur-forming, storage, and transportation facilities that are part of the facility. YES also means that materials will not be stored at this facility or that the materials stored are exempt from <i>Directive 055</i> requirements.

**NO** means that due to exceptional circumstances, all applicable requirements cited above have not been met.

If **NO**, you must attach

- a detailed explanation of why the storage requirements will not be met, a description of alternative storage methods, and
- a discussion of how the environment will not be compromised by a relaxation of the requirements.

The ERCB will review the circumstances and decide if an exemption is warranted.

**7. ERCB oilfield waste management requirements will be met (*Directive 058*)**

**YES** means that an oilfield waste management plan will be developed and implemented to manage any wastes generated as a result of the facility's operations.

On-site waste management (one-time treatment or waste management component) is limited to first-party oilfield wastes generated inside the production system.

Facilities required for the disposal of Class 1a/1b fluids require approval under *Directive 058*.

Standalone surface facilities that dispose of Class II fluids only but maintain a Class 1a or 1b disposal scheme approval for the well require approval under *Directive 058*.

An oilfield waste management system requires approval as an oilfield waste management facility pursuant to the application requirements detailed in *Directive 058*.

The requirements for the management of oilfield wastes are detailed in *ID 96-03, Directive 058, ID 2000-04, ID 2000-03, ID 99-04, IL 99-02, and IL 98-02*.

**8. ERCB production measurement requirements will be met.  
(Section 5.9.13)**

**YES** means that the facility design and operation will meet the production measurement standards detailed in *Directive 056*, Section 5.9.13 and Appendix 2, and in *Directive 060*.

**NO** means that due to exceptional circumstances, all applicable requirements cited above have not been met.

If **NO**, you must attach a detailed explanation of why measurement will not meet ERCB requirements and a discussion of the proposed alternative.

The ERCB will review the circumstances and decide if an exemption is warranted.

**9. NO<sub>x</sub> air emissions meet the Alberta Ambient Air Quality Objectives.  
(Sections 5.9.7 and 5.9.14)**

**YES** means that NO<sub>x</sub> emissions will be within the *Alberta Ambient Air Quality Objectives* issued by AENV or that the facility has been registered with and/or approved by AENV.

**NO** means that due to exceptional circumstances, NO<sub>x</sub> emissions will not be within the *Alberta Ambient Air Quality Objectives*.

If NO, you must attach

- an explanation of why the *Alberta Ambient Air Quality Objectives* will not be met;
- documentation that confirms dispersion modeling was conducted in accordance with the Air Quality Model Guideline;
- the source parameters, locations, elevations and NO<sub>x</sub> emission rates for all sources;
- predicted maximum ground-level NO<sub>2</sub> concentrations;
- the name of the dispersion model that was used;
- description of meteorological data used; and
- terrain map of the study area.

The ERCB will review the circumstances and decide if an exemption is warranted.

**10. Approval from or registration with AENV is required.**

YES means that

- the facility requires approval from or registration with AENV under the *Environmental Protection and Enhancement Act (EPEA) Activities Designation Regulation* or the *Code of Practice for Compressor and Pumping Stations and Sweet Gas Processing Plants* and may require an application to AENV, or the licence amendment application does not require a change to the existing AENV approval or registration of the facility.

NO means that the facility is not regulated under *EPEA*.

**11. AENV requires an environmental impact assessment.**

YES means that the facility requires an environmental impact assessment (EIA) under *EPEA*.

NO means that the facility does not require an EIA under *EPEA*.

This information will help ERCB staff coordinate a joint notice, if required.

**12. The proposed facility will include compressors (new licence only).**

YES means that this application for a new facility licence includes gas compression. You must complete Schedule 2.4.

A response is not required for licence amendment applications.

NO means that this application for a new facility licence does not include gas compression.

**13. The proposed facility will include pumps (new licence only).**

YES means that this application for a new facility licence includes injection/disposal pumps. You must complete Schedule 2.4.

A response is not required for licence amendment applications.

NO means that this application for a new facility licence does not include injection/disposal pumps.

**14. The proposed facility site requires *Historical Resources Act* clearance (Freehold land only).**  
(Section 5.9.15)

YES means that the new facility lease or expanded facility lease (in the case of a licence amendment) requires clearance by Alberta Culture and Community Spirit, in accordance with the *Historical Resources Act*.

NO means that the new facility lease or expanded facility lease (in the case of a licence amendment) does not require clearance by Alberta Culture and Community Spirit or that the facility is located on Crown land.

**14a. If YES, clearance has been granted for the facility site.**

Only complete this question if you have answered YES to question 14.

YES means that Alberta Culture and Community Spirit has granted clearance for the proposed facility site.

NO means that Alberta Culture and Community Spirit has not granted clearance for the proposed facility site.

If NO, you must attach a detailed explanation as to why Alberta Culture and Community Spirit has not provided clearance.

The ERCB will review the circumstance and decide if an exemption is warranted.

**15. The licensee is the only working interest participant (new licence only).**

YES means that the licensee is the only working interest participant.

A response is not required for licence amendment applications.

NO means that the licensee is not the only working interest participant.

If NO, you must complete Schedule 2.1, providing details on all working interest participants and the percentage ownership of each.

**16. The proposed facility meets the ERCB environmental requirements.**  
(Section 5.9.16)

YES means the proposed facility meets all applicable ERCB environmental requirements.

NO means the facility does not meet all applicable ERCB environmental requirements.

If NO, you must attach a detailed explanation of why the facility does not meet ERCB environmental requirements and what measures will be in place to ensure that the facility will not have a negative impact on the environment.

## **Directive 056 – Schedule 2.1**

### **Working Interest Participants—Facilities**

DAY            MONTH            YEAR

**APPLICANT'S REFERENCE**

## 1. IDENTIFICATION

**Applicant BA Code** \_\_\_\_\_

**Applicant Name** \_\_\_\_\_

## 2. WORKING INTEREST PARTICIPANTS

### **5.14.2 How to Complete Schedule 2.1: Working Interest Participants—Facilities**

*Schedule 2.1 must be completed for each new Facility Licence Application submitted when you are not the 100 per cent (%) interest participant in the proposed facility.*

*Do not submit a Schedule 2.1 for licence amendment applications.*

*The applicant must be a working interest participant in the facility to apply for a facility licence.*

<b>Date</b>	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
<b>Applicant's Reference</b>	Enter your own file reference in the designated area (optional).

---

#### **Step 1: Identification**

<b>Applicant BA Code</b>	Enter the 4-digit business associate (BA) code issued to your company.
--------------------------	--

<b>Applicant Name</b>	Enter the full corporate name of the applicant.
-----------------------	---

---

#### **Step 2: Working Interest Participants**

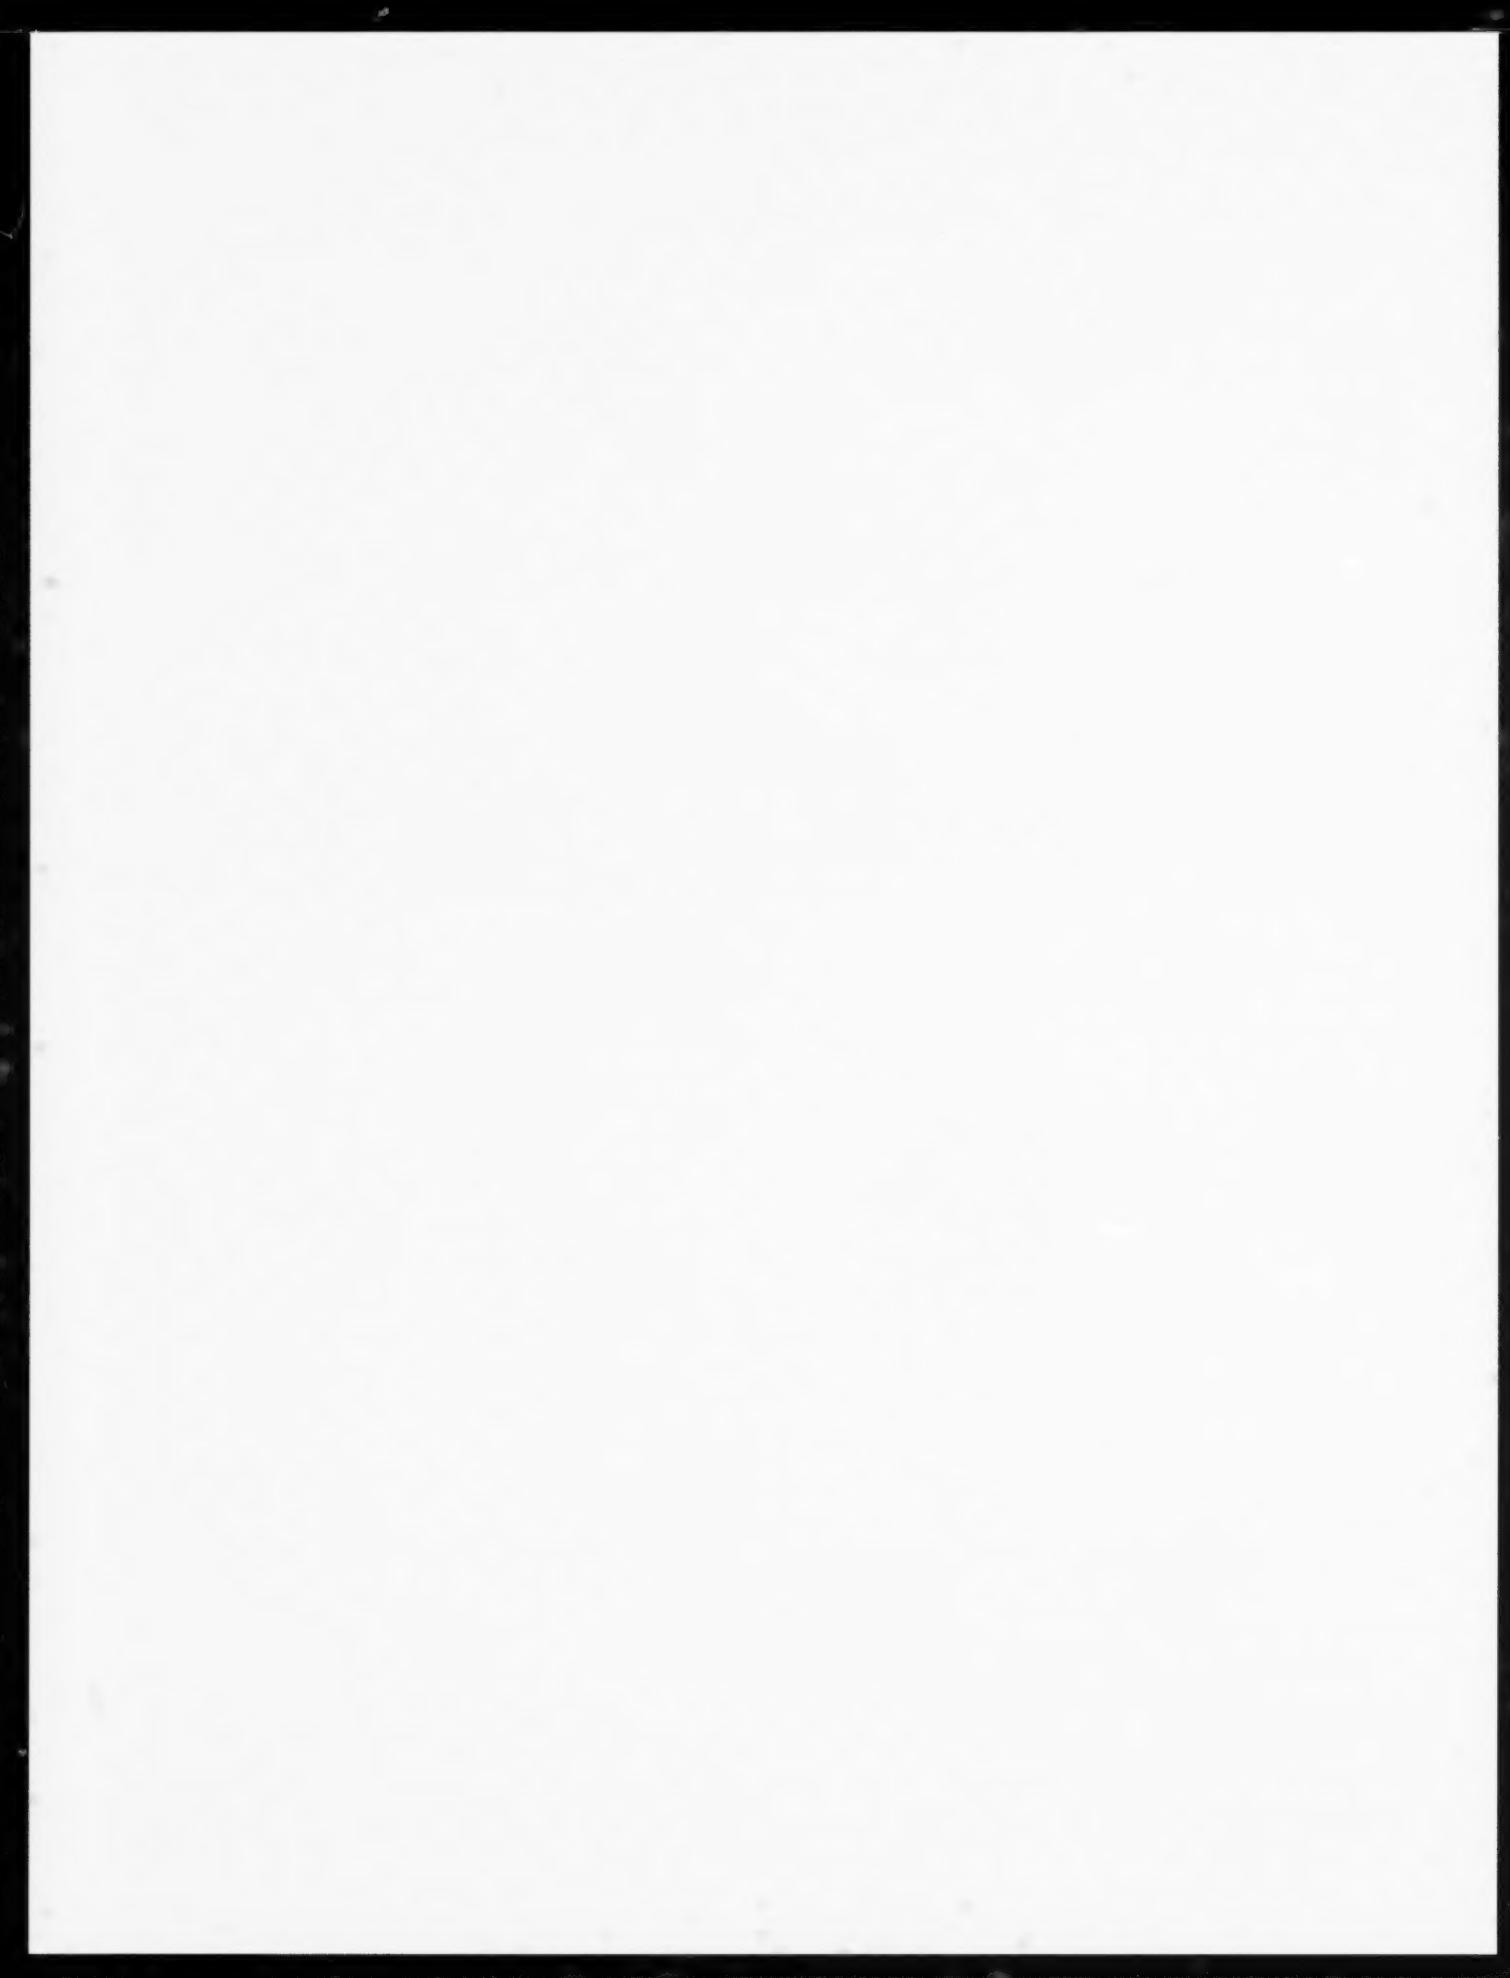

<b>BA Code</b>	Enter the 4-digit BA code issued to the working interest participant for each participating company, if available.
----------------	--

<b>Company Name</b>	Enter the full corporate name of each working interest participant, including the applicant's name.
---------------------	---

The ERCB will not accept "Partnerships" as a response. You must determine which company or companies within the partnership should be entered.

<b>Percentage (%)</b>	Enter each participant's percentage of participation in the facility development.
-----------------------	---

Working interest participation percentage must total 100%.

DAY	MONTH	YEAR

_____ t/d	_____ 10 <sup>3</sup> m <sup>3</sup> /d

**3. TECHNICAL INFORMATION**

1. A sour gas proliferation review has been conducted in accordance with ID 2001-03 ..... YES  NO

2. The proposed facility is part of an approved acid gas injection scheme ..... YES  NO

2a. If YES, Scheme Approval No. \_\_\_\_\_

3. The proposed facility will remove CO<sub>2</sub> from the inlet gas stream using a regenerative system ..... YES  NO

### **5.14.3 How to Complete Schedule 2.2: Gas Plants—Facilities**

*A separate Schedule 2.2 must be completed for each Schedule 2 application for a Category B, C, D, or E gas plant.*

<b>Date</b>	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
<b>Applicant's Reference</b>	Enter your own file reference in the designated area (optional).

---

#### **Step 1: Identification**

<b>Applicant BA Code</b>	Enter the 4-digit business associate (BA) code issued to your company.
<b>Applicant Name</b>	Enter the full corporate name of the applicant associated with the BA code.

<b>Step 2: Total Recovered Products</b>	Enter the maximum daily design rates for all applicable recovered and sales products to 2 decimal places.
---	---

---

#### **Step 3: Technical Information**

*If you are applying for a Category C, D, or E gas plant, answer questions 1 and 2.*

*If you are applying for a Category B gas plant, answer question 3.*

<b>1. A sour gas proliferation review has been conducted in accordance with ID 2001-03.</b>	YES means that a sour gas proliferation review for a new Category C, D, or E gas processing plant that meets the requirements of ID 2001-03 was completed or that this is a licence amendment application.
	NO means that a sour gas proliferation review was not completed.

If NO, you must attach a detailed explanation as to why the requirements cannot be met.

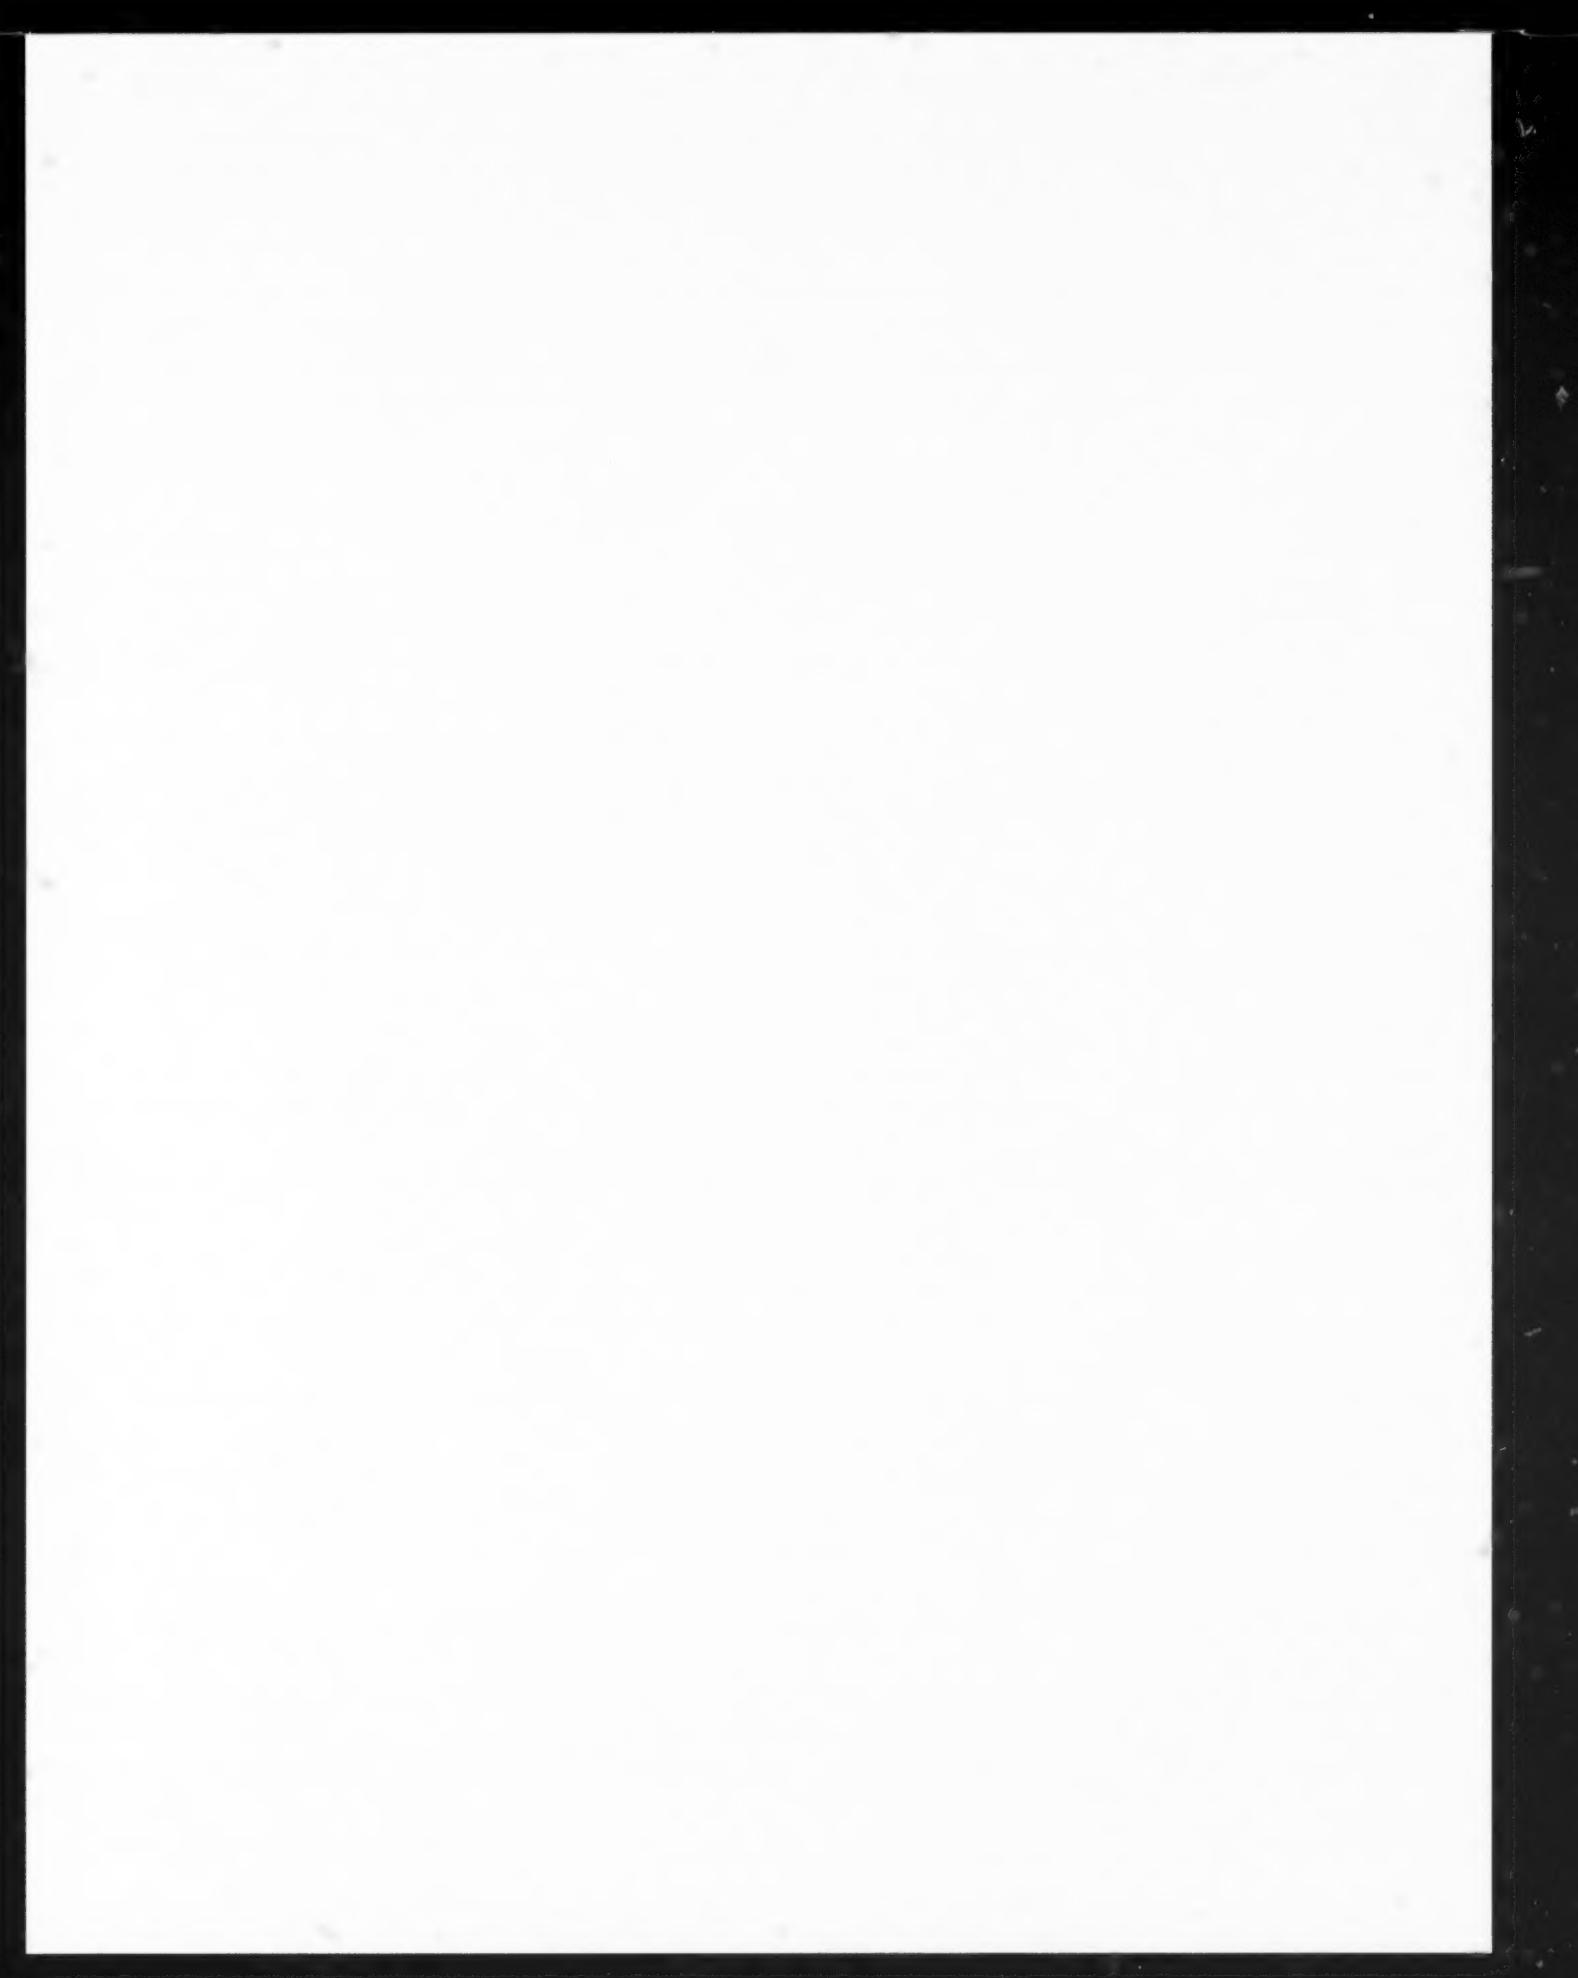

The ERCB will review the circumstances and decide if an exemption is warranted.

<b>2. The proposed facility is part of an approved acid gas injection scheme.</b>	YES means that this facility is a Category C, D, or E gas processing plant that recovers an acid gas stream that is disposed to an approved underground formation.
	If YES, enter the scheme approval number required in question 2a.

NO means that this facility is a Category C, D, or E gas processing plant that does not recover an acid gas stream that is disposed through subsurface injection.

<b>2a. If YES, Scheme Approval No.</b>	Only complete this if you answer Yes to question 2.
--	---

<b>3. The proposed facility will remove CO<sub>2</sub> from the inlet gas stream using a regenerative system.</b>	YES means that a regenerative sweetening process is in place exclusively for the removal of CO <sub>2</sub> from the gas stream.
	NO means that this facility is not removing CO <sub>2</sub> using a regenerative processing system.

#### **5.14.4 How to Complete Schedule 2.3: H<sub>2</sub>S Information—Facilities**

*A separate Schedule 2.3 must be completed for each Schedule 2 application for a Category C, D, or E facility.*

**Date** Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).

**Applicant's Reference** Enter your own file reference in the designated area (optional).

#### **Step 1: Identification**

**Applicant BA Code** Enter the 4-digit business associate (BA) code issued to your company.

**Applicant Name** Enter the full corporate name of the applicant associated with the BA code.

#### **Step 2: Gas Treating and Processing Information**

*If you check a **BOLD** response, you must attach supporting information.*

**Sweetening Process** Check the appropriate box for the type of sweetening process used.

Check “None” if you are not treating or processing the inlet gas for H<sub>2</sub>S removal.

Check “Both” if you are using both regenerative and nonregenerative sweetening processes at the facility.

If you select Regenerative, you must complete Schedule 2.2.

**Acid Gas Disposal Method** If the facility uses a regenerative sweetening process, check the appropriate boxes for all processes used.

If you check “Subsurface Injection,” you must answer questions 2 and 2a on Schedule 2.2.

If you check “Other,” you must attach a description of the alternative process and supporting technical documents/papers discussing the method.

The ERCB will review the circumstances and decide if an exemption is warranted.

**Sulphur Recovery Process (Section 5.9.5)** For Category E applications, check the appropriate boxes for all processes used.

If you select “Other,” you must attach

- a description of the proposed process, including a supporting process flow diagram, and material balance;
- technical documents/papers discussing the process;
- an explanation of how the proposed process will meet the sulphur recovery requirements;
- available correspondence from Alberta Environment related to the process; and
- the results/description of the process in operation at another facility.

	The ERCB will review the circumstances and decide if an exemption is warranted.
<b>Acid Gas Volume</b> (Regenerative sweetening only)	If the facility uses a regenerative sweetening process, enter the maximum daily design rate of acid gas ( $\text{H}_2\text{S}$ and $\text{CO}_2$ ) removed from the sour gas inlet stream in thousands of cubic metres per day ( $10^3 \text{ m}^3/\text{d}$ ) to 2 decimal places.
<b><math>\text{H}_2\text{S}</math> Content of Acid Gas</b> (Regenerative sweetening only)	If the facility uses a regenerative sweetening process, enter the $\text{H}_2\text{S}$ content of the acid gas stream in moles per kilomole (mol/kmol) to 2 decimal places.
<b>Maximum <math>\text{H}_2\text{S}</math> Content of Inlet Gas</b>	For all Category C, D, and E facility applications, enter the maximum $\text{H}_2\text{S}$ content of the raw inlet gas in mol/kmol to 2 decimal places.  For facilities with multiple inlet streams, enter the $\text{H}_2\text{S}$ value from the inlet stream with the highest $\text{H}_2\text{S}$ content. The highest $\text{H}_2\text{S}$ content must be based either on pipelines entering the facility or on any well associated with the raw gas inlet.
<b>Maximum Continuous Sulphur Emission Rate</b>	Enter the maximum continuous sulphur emission rate on a sulphur-equivalent basis in tonnes per day (t/d) to 2 decimal places.  This number should represent the sum of the sulphur content of the tail gas emission from a sulphur recovery process, continuous acid gas flaring/incineration, emissions from produced water tanks, and continuous or routine flaring/incineration of gas containing $\text{H}_2\text{S}$ .  This number does not include sulphur emissions from infrequent emergency or maintenance flaring/incineration.
<b>Sulphur Recovery Efficiency</b> (quarterly-calendar)	For all E Category gas processing plants, enter the minimum sulphur recovery efficiency percentage (%) determined on a calendar quarter-year average basis to 1 decimal place.  For all D Category gas processing plants where subsurface injection has been selected in Step 2, enter the equivalent sulphur recovery efficiency, consistent with the approved sulphur inlet and Table 1 from <i>ID 2001-03</i> .  The sulphur recovery efficiency must meet the requirements of <i>ID 2001-03</i> .

### Step 3: Technical Information

**1. Sour setback requirements have been met.**  
(Section 5.9.9)

---

YES means that this is a Category C, D, or E facility and the setback requirements outlined in Table 5.5 have been met.

YES also means that there are no setbacks imposed by pipelines designated as sour level associated with this facility.

**NO** means that the facility is a Category C, D, or E facility, but due to exceptional circumstances, it does not meet the setback requirements.

If **NO**, you must attach a detailed explanation as to why the requirements cannot be met.

**2. A method to recover vapours will be implemented.**  
(Section 5.9.11)

The ERCB will review the circumstances and decide if an exemption is warranted.

YES means that you will be implementing a method to recover stock tank vapours, as required by the *OGCR*, Section 7.070, and that a method to contain vapours during the transfer and transport of fluids containing more than 0.01 mol/kmol H<sub>2</sub>S will be implemented.

YES may also mean, that the facility does not require a vapour recovery system.

For licence amendment applications, YES means that a vapour recovery system already exists.

NO means that due to exceptional circumstances, all applicable requirements cited above have not been met.

If NO, you must attach a detailed explanation of why a vapour recovery unit will not be installed and a discussion of mitigative measures to ensure that off-lease odours do not occur.

The ERCB will review the circumstances and decide if an exemption is warranted.

**3. SO<sub>2</sub> air emissions meet the Alberta Ambient Air Quality Objectives.**  
(Section 5.9.7 and Section 5.9.14)

YES means that SO<sub>2</sub> emissions will be within the *Alberta Ambient Air Quality Objectives* issued by AENV, as predicted by dispersion modelling, or that the facility emissions have been approved by AENV.

NO means that due to exceptional circumstances, SO<sub>2</sub> emissions will not be within the *Alberta Ambient Air Quality Objectives*.

If NO, for SO<sub>2</sub> exceedances you must attach

- a schematic diagram or description of the flare stack;
- the source parameters, locations, elevations, and SO<sub>2</sub> emission rates for all sources;
- predicted maximum ground-level SO<sub>2</sub> concentrations;
- the name of the dispersion model used;
- a description of the meteorological data used;
- a terrain map of the study area;
- for facilities with less than 10 mol/kmol H<sub>2</sub>S, the heating value of the gas stream for the flare/incinerator; and
- a description of the magnitude and frequency of potential SO<sub>2</sub> exceedances, and information on situations leading to SO<sub>2</sub> exceedances (e.g., operational scenarios, meteorological conditions).

The ERCB will review the circumstances and decide if an exemption is warranted.

**4a. Maximum calculated emergency planning zone**

Enter the maximum calculated emergency planning zone radius in km to 2 decimal places, as determined by the requirements of *Directive 071*.

**4b. Number of surface developments within the maximum calculated emergency planning zone**

Enter the total number of surface developments located within the maximum calculated emergency planning zone.

1a. Night-time permissible sound level (PSL) at the nearest or most impacted residence \_\_\_\_\_ dBa.

1b. Predicted overall sound level at the nearest or most impacted residence \_\_\_\_\_ dBa.

### **5.14.5 How to Complete Schedule 2.4: Compressors/Pumps—Facilities**

*You are not required to complete Schedule 2.4 unless your facility application includes the installation and/or removal of compressors and/or pumps. Compressors less than 75 kW that were installed previously as an exempt activity (Section 5.5.3) should be captured on Schedule 2.4 the next time an amendment application for the facility is required.*

<b>Date</b>	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
<b>Applicant's Reference</b>	Enter your own file reference in the designated area (optional).

---

#### **Step 1: Identification**

<b>Applicant BA Code</b>	Enter the 4-digit business associate (BA) code issued to your company.
<b>Applicant Name</b>	Enter the full corporate name of the applicant associated with the BA code.

---

#### **Step 2: Compressors**

*Complete this step if you are installing and/or removing upstream compression at a new or existing site. The removal of compression is not a mandatory application submission but will be processed at the applicant's request (Section 5.9.8).*

<b>Install/Remove</b>	Enter "I" if you are applying to install a compressor. Enter "R" if you are applying to remove a compressor. Include any compressors less than 75 kW that may have been installed previously as an exempt activity.
<b>Compressor Rating</b>	Enter the kilowatt (kW) rating of each unit proposed for installation and/or removal at this facility.
<b>Compressor Driver Power Source</b>	Check the appropriate driver source for each unit proposed for installation and/or removal at this facility.
<b>NO<sub>x</sub> Emission Rating</b>	Enter the manufacturer's rating for NO <sub>x</sub> emissions in grams of NO <sub>x</sub> per kilowatt hour (g/kWh) for each natural gas compressor unit proposed for installation and/or removal at this facility. Enter 0 for electric-driven compressors.
<b>Total Number of Gas Compressors on Site</b>	Enter the total number of natural gas-driven compressors located at the facility, including any new units being added by this application.
<b>Total Number of Electric Compressors on Site</b>	Enter the total number of electric-driven compressors located at the facility, including any new units being added by this application.
<b>Total on-Site Compressor Wattage</b>	Enter the sum of the compressor wattage for the entire facility operations in kilowatts (kW). The total must include any new units being added by this application.

### **Step 3: Pumps**

---

*Complete this step if you are installing and/or removing upstream disposal/injection pumps at a new or existing site. The removal of injection/disposal pumps is not a mandatory application submission but will be processed at the applicant's request (Section 5.9.8).*

<b>Install/Remove</b>	Enter "I" if you are applying to install an injection/disposal pump. Enter "R" if you are applying to remove an injection/disposal pump.
<b>Pump Rating</b>	Enter the kilowatt (kW) rating of each unit proposed for installation and/or removal at this facility.
<b>Pump Driver Power Source</b>	Check the appropriate driver source for each unit proposed for installation and/or removal at this facility.
<b>NO<sub>x</sub> Emission Rating</b>	Enter the manufacturer's rating for NO <sub>x</sub> emissions in grams of NO <sub>x</sub> per kilowatt hour (g/kWh) for each natural gas injection/disposal pump proposed for installation and/or removal at this facility.  Enter 0 for electric-driven pumps.
<b>Total Number of Gas Pumps on Site</b>	Enter the total number of natural gas-driven injection/disposal pumps located at the facility, including any new units being added by this application.
<b>Total Number of Electric Pumps on Site</b>	Enter the total number of electric-driven injection/disposal pumps located at the facility, including any new units being added by this application.
<b>Total on-Site Pump Wattage</b>	Enter the sum of the pump wattage for the entire facility operations in kilowatts (kW).  The total must include any new units being added by this application.

### **Step 4: Technical Information**

---

*Provide the following information based on the Noise Impact Assessment, required by Directive 038, conducted for this facility.*

<b>1a. Night-time permissible sound level (PSL) at the nearest or most impacted residence (Directive 038)</b>	Enter the night-time permissible sound level (PSL) at the nearest or most impacted residence in decibels absolute (dBA) to 2 decimal places.  For remote locations, a distance of 1500 m may be used to determine the facility PSL if there are no residences within that radius.
<b>1b. Predicted overall sound level at the nearest or most impacted residence (Directive 038)</b>	Enter the predicted overall sound level at the nearest or most impacted residence in dBA to 2 decimal places.  This value may be based on distance of 1500 m if there are no residences within that radius.

## Section 6 Pipeline Licence Applications (Schedule 3)

### 6.1 Overview

An applicant must use Schedule 3 when applying to

- construct and operate a new pipeline that requires a new pipeline licence;
- construct and operate a new pipeline that is to be added to an existing pipeline licence;
- construct and operate a permanent pipeline, regardless of length, which is not contained wholly within the boundary of a surface facility lease or an adjoining surface facility lease;
- construct and operate a permanent or temporary surface pipeline, except for pipelines that will be in continuous use for less than 21 consecutive days for the purpose of well testing (consent is obtained from the local ERCB Field Centre; see *Directive 077: Pipelines – Requirements and Reference Tools*);
- change the operating parameters of an existing pipeline; or
- construct a pipeline installation that includes a
  - compressor station or pump station (in continuous use for more than 21 days) associated with pipelines carrying processed (sales) product located downstream of a facility,
  - tank farm,
  - pipeline oil loading and unloading facility, or
  - pipeline line heater (Category C and D).

Schedule 3 is also used to notify the ERCB of a pipeline abandonment and pipeline discontinuation.

The applicant must submit only one Schedule 3, Schedule 3.1, and Schedule 3.2 per pipeline application. Each Schedule 3 can have only one purpose (i.e., the applicant must apply for either new construction or an amendment). Multiple amendments to pipelines under one licence may be included on a Schedule 3.

*Directive 026: Setback Requirements for Oil Effluent Pipelines* introduces setback requirements for oil effluent pipelines containing greater than 10 mol/kmol of H<sub>2</sub>S. The requirements set out in *Directive 026* must be met when filing a *Directive 056* pipeline licence application for new construction of any pipeline containing greater than 10 mol/kmol H<sub>2</sub>S.

Gas utility pipelines and any associated pipeline installations are not under the jurisdiction of the ERCB. Applicants seeking to acquire or amend a licence for a gas utility pipeline or associated pipeline installation should contact the Alberta Utilities Commission (AUC) for direction on how to proceed. Refer to *Bulletin 2007-46: Gas Utility Pipelines Under the Jurisdiction of the Alberta Utilities Commission* for further information regarding the change in jurisdiction.

## **6.2 Project Submissions**

A project is defined as a network of facilities, pipelines, and/or wells that connect to a common facility. A project submission may consist of the consecutive submissions of related single licence applications or the single submission of multiple licence applications of related facilities, pipelines, and wells. The ERCB encourages applicants to identify related applications that are part of the same project through the use of a common reference number in the Applicant's Reference section.

**Numbered statements represent requirements and expectations (see Section 1.4).**

- 1) If the applicant is filing an application for a project submission:
  - a) the project must be submitted under one company name using one Schedule 1, and
  - b) the applicant must complete a separate Schedule 3 for each pipeline licence in the project, and
  - c) each Schedule 3.1 and 3.2 must be related to only one Schedule 3.

## **6.3 Licences**

Applications submitted under *Directive 056* are for a licence to construct and operate a pipeline. For administrative purposes, the pipeline status automatically changes from "permitted" to "operating" one year from the date the licence was issued.

### **6.3.1 Licence Expiry**

New pipeline construction licences expire one year from the date of issue if right-of-way clearing, construction, or operation has not begun on that pipeline. If an amendment is made to a pipeline licence with a "permitted" status, the expiry date remains unchanged.

- 2) The applicant must submit a licence amendment at least 30 days prior to the licence expiry date informing the ERCB that a pipeline will not be constructed.
- 3) If an applicant intends to proceed with a project for which a licence has expired, it must fulfill all applicable regulatory requirements, including participant involvement requirements, before filing a new application (also see Section 2).

Due to the complexity of some developments, it is possible that the applicant may not be able to act on a licence before the expiry date. If licence expiry is imminent, the applicant should contact ERCB Facilities Applications for advice on how best to proceed.

- 4) Prior to initiating new construction when a licence is nearing licence expiry, the applicant must conduct a new resident/landowner search and determine if any new issues have arisen since the licence was granted.
- 5) If a pipeline licence has expired and construction has not commenced, the applicant must advise Facilities Applications by submitting a self-declaration application. The applicant should contact Facilities Applications for further direction on how to proceed.

- 6) If an applicant does not intend to proceed with the licence, it must notify Facilities Applications.

### 6.3.2 Licence Extensions

The ERCB issues a licence for a term of one year. An applicant may make a request to extend the expiry date of an applied-for licence at the time of application. Requests for extensions will be considered on a case-by-case basis, but the date of expiry will normally not extend beyond two years from the date the licence was issued.

- 7) To get an extended licence expiry date, an applicant must confirm at the time of application that it will update the associated participant involvement program before acting on the licence.

## 6.4 Category Type and Consultation and Notification Requirements

The types of pipelines requiring a licence under *Directive 056* are listed in Table 6.1, along with their respective consultation and notification requirements. The category type of a pipeline is dependent on the pipe diameter and H<sub>2</sub>S content of the transported product.

- 8) The applicant must identify the correct category type for the proposed pipeline and perform all associated consultations and notifications.

Pipeline activities requiring licence amendments under *Directive 056* are listed in Table 6.2, along with their respective notification requirements.

- 9) If an outstanding concern/objection is received during the notification process for the pipeline activities of Table 6.2, the applicant must file a nonroutine application prior to commencing any of these activities.

Stakeholder notification that has been completed as part of a *Directive 023* application for a new in situ oil sands project or an amendment to an existing project satisfies the participant involvement requirements for any related *Directive 056* application for the associated pipelines within the ERCB-approved in situ oil sands project area.

## 6.5 Exemptions

- 10) Although no application is required under *Directive 056* for the following pipelines and activities, the company must provide a project-specific information package to any landowners, occupants, and residents that may be directly and adversely affected by the activity.

If a concern/objection to the proposal is received and remains unresolved, the ERCB may require that a nonroutine application be submitted.

Although applications are not required under *Directive 056*, the company must meet all applicable regulatory requirements. If the company is unable to meet all the regulatory requirements, it must obtain a waiver from the requirement from the appropriate ERCB group.

### 6.5.1 Pipeline Installations

The licensing of the following pipeline installations does not occur under *Directive 056*:

- loading racks,
- meter stations,
- regulator stations,
- a temporary pipeline installation that will be in continuous use for less than 21 consecutive days for the purpose of well testing (consent for temporary pipeline installations is obtained from the local ERCB Field Centre), and
- line heaters associated with Category B pipelines.

**Table 6.1. Pipeline category type and consultation and notification requirements**

Category	Name	Type	Description	Personal consultation and confirmation of nonobjection	Notification
B, C, D	Records correction	000	All		
B	Pipelines, gas (non-sour service <sup>1</sup> )	100	Natural gas $\leq$ 323.9 mm OD	• Landowners and occupants of the right-of-way	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities along the right-of-way</li> <li>• Urban authorities within 1.5 km</li> <li>• For Category Type B101, B111 and B121, landowners and occupants within 0.2 km</li> </ul> <p>When H<sub>2</sub>S <math>\geq</math> 0.1 mol/kmol:</p> <ul style="list-style-type: none"> <li>• Residents in the EPZ</li> </ul>
		101	Natural gas $>$ 323.9 mm OD		
	Pipelines, oil effluent <sup>2</sup> non-sour service <sup>1</sup>	110	Oil effluent $\leq$ 323.9 mm OD		
		111	Oil effluent $>$ 323.9 mm OD		
	Pipelines, other	120	Other $\leq$ 323.9 mm OD		
		121	Other $>$ 323.9 mm OD		
	Pipeline downstream facilities	130	Pipeline tank farm		
		131	Pipeline oil loading or unloading terminal		
		132	Compressor station		
		133	Pump station		
C	Pipelines, gas (sour service but $\leq$ 10 mol/kmol H <sub>2</sub> S <sup>1</sup> )	380	Sour service natural gas $\leq$ 323.9 mm OD	• Landowners and occupants of the right-of-way	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities along the right-of-way</li> <li>• Urban authorities within 1.5 km</li> <li>• For Category Type C381 and C383, landowners and occupants within 0.2 km</li> </ul> <p>When H<sub>2</sub>S <math>\geq</math> 0.1 mol/kmol:</p> <ul style="list-style-type: none"> <li>• Residents in the EPZ</li> </ul>
		381	Sour service natural gas $>$ 323.9 mm OD		
	Pipelines, oil effluent <sup>2</sup> sour service <sup>1</sup> )	382	Sour service oil effluent $\leq$ 323.9 mm OD		
		383	Sour service oil effluent $>$ 323.9 mm OD		
	Pipeline upstream facilities	384	Pipeline line heater		

(continued)

<sup>1</sup> For pipeline systems containing a gas phase, sour service is service in which the H<sub>2</sub>S partial pressure exceeds 0.3 kPa at the licensed MOP. For pipeline systems not containing a gas phase (gas-free liquid pipeline systems), sour service is service in which the effective H<sub>2</sub>S partial pressure exceeds 0.3 kPa at the bubble point absolute pressure. (See Section 6.9.20).

<sup>2</sup> A release volume must be calculated for all oil effluent pipelines containing greater than 10 mol/kmol H<sub>2</sub>S. Applications for these pipelines must meet the personal consultation/confirmation of nonobjection and notification requirements for Category D pipelines based on the level of the proposed pipeline as defined in Table 6.3.

Table 6.1. Pipeline category type and consultation and notification requirements (concluded)

Category	Name	Type	Description	Personal consultation and confirmation of nonobjection	Notification
D	Pipelines, gas > 10 mol/kmol H <sub>2</sub> S	452	Level 1 natural gas ≤ 323.9 mm OD	• Landowners and occupants of the right-of-way	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities along the right-of-way</li> <li>• Landowners, occupants and residents within 0.5 km</li> <li>• Urban authorities within 1.5 km</li> </ul> <p>When H<sub>2</sub>S ≥ 0.1 mol/kmol:</p> <ul style="list-style-type: none"> <li>• Residents in the EPZ</li> </ul>

	Pipeline upstream facilities	531	Pipeline line heater	• Landowners and occupants	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> </ul> <p>When H<sub>2</sub>S ≥ 0.1 mol/kmol:</p> <ul style="list-style-type: none"> <li>• Residents in the EPZ</li> </ul>

**Table 6.2 Licence amendment requirements for pipeline/pipeline installations activities**

Activity	Participant involvement	Application
Complete removal (including all crossings)	Notification must occur prior to the filing of an application and the removal operation and must include <ul style="list-style-type: none"> <li>• landowners and occupants of the entire pipeline right-of-way and within the associated setbacks, and</li> <li>• residents within the distances specified in Table 6.1 for Category D pipelines.</li> </ul>	Licence must be obtained before commencing the removal operation.
Not constructed	Notification must be provided to <ul style="list-style-type: none"> <li>• landowners and occupants of the entire pipeline right-of-way and within the associated setbacks, and</li> <li>• residents within the distances specified in Table 6.1 for Category D pipelines.</li> </ul>	Application is filed routine 30 days prior to expiry of pipeline licence.
Abandonment or partial removal	Notification must occur prior to the abandonment or partial removal operation and must include <ul style="list-style-type: none"> <li>• landowners and occupants of the entire pipeline right-of-way and within the associated setbacks, and</li> <li>• residents within the distances specified in Table 6.1 for Category D pipelines.</li> </ul>	Application is filed within 90 days of completing the abandonment operation to advise the ERCB of the abandonment.  Licence must be obtained before commencing removal operations.
Discontinuation	Notification is not mandatory for discontinuations.	Application is filed within 90 days of completing the discontinuation operation to advise the ERCB of the discontinuation.
H <sub>2</sub> S change, MOP change, substance change, flow reversal, line split	Notification is not mandatory for these activities.  If any of these activities result in the pipeline changing to a Category D or the setbacks increase, personal consultation with nonobjection and notification must occur prior to the filing of an application and commencing operations.  This must include <ul style="list-style-type: none"> <li>• landowners and occupants of the entire pipeline right-of-way and within the associated setbacks, and</li> <li>• residents within the distances specified in Table 6.1 for Category D pipelines.</li> </ul> If any of these activities result in a setback decrease or the setback no longer exists, notification must occur with landowners and occupants of the entire pipeline right-of-way and within the associated setbacks.  When the EPZ is affected by the proposed amendment, notification to residents in the EPZ must occur prior to the filing of the application.	Licence must be obtained prior to commencing operations.
Resumption of discontinued pipeline	Notification is not mandatory for resumption of a discontinued pipeline.  If other activities are conducted in conjunction with the resumption that result in the pipeline changing to a Category D or the setbacks increase, personal consultation with nonobjection and notification is required prior to filing of application and commencing operation.  This must include <ul style="list-style-type: none"> <li>• landowners and occupants of the entire pipeline right-of-way and within the associated setbacks, and</li> <li>• residents within the distances specified in Table 6.1 for Category D pipelines.</li> </ul> When the EPZ is affected by the proposed amendment, notification to residents in the EPZ must occur prior to the filing of the application.	Licence must be obtained before commencing resumption operations.

(continued)

**Table 6.2. Pipeline category type and consultation and notification requirements (concluded)**

<b>Activity</b>	<b>Participant Involvement</b>	<b>Application</b>
Resumption of abandoned pipeline/pipeline installations	<p>Personal consultation with confirmation of nonobjection and notification must occur prior to the filing of application and resumption of operation and must include</p> <ul style="list-style-type: none"> <li>• landowners and occupants of the entire pipeline right-of-way and within the associated setbacks, and</li> <li>• residents within the distances specified in Table 6.1 for Category D pipelines.</li> </ul> <p>When the EPZ is affected by the proposed amendment, notification to residents in the EPZ must occur prior to the filing of the application.</p>	Application deemed nonroutine; licence must be obtained before commencing operations (comprehensive engineering assessment required).
Liner installation or removal	Notification is not mandatory for liner installations or removals.	Licence must be obtained prior to commencing liner installation or removal.

### 6.5.2 Pipeline Activities

The licensing of the following pipelines and activities is not required under *Directive 056*:

- a utility cooperative pipeline operated at a maximum operating pressure (MOP) of 700 kPa or less (Alberta Agriculture, Food and Rural Development),
- a pipeline replacement if each individual section is less than 100 m long and
  - the replaced pipe is removed,
  - the work is carried out within the existing right-of-way, and
  - the replacement sections are identical, of the same material, or evaluated as being equivalent or of a higher grade for the licensed purpose and operating conditions,
- the pipeline or tie-in is wholly within a single surface lease boundary or is wholly within adjacent or abutting facility surface leases (*Pipeline Regulation*, Section 1 (1)m and 1(4)), and
- Category B, C, and D surface pipelines that will be in continuous use for less than 21 consecutive days for the purpose of well testing (consent for surface pipeline is obtained from the local ERCB Field Centre; see *Directive 077*).

### 6.6 Records Correction

Applications to correct licence records should follow the self-disclosure process (see Section 3.9) for licence amendments, using “other” for the licence amendment type.

### 6.7 Licence Amendments

- 11) Applicants must follow the requirements set out in *Directive 026* when making an application to amend an oil effluent pipeline with greater than 10 mol/kmol H<sub>2</sub>S content.
- 12) The licensee must submit a pipeline licence amendment application for
  - a) MOP changes,
  - b) H<sub>2</sub>S changes,
  - c) change of substance,

- d) liner installation/removal,
- e) resumption,
- f) discontinuation,
- g) abandonment/partial removals,
- h) removal,
- i) line split,
- j) flow reversal, and
- k) a pipeline that is not constructed.

### 6.7.1 Pipeline Applications—Checklist for Minimum Technical Requirements

Additional technical evaluation should be considered when the following pipeline activities are proposed: a pipeline resumption, MOP increase, substance change, liner installation, or composite pipeline installation. The Pipeline Applications Checklist for Minimum Technical Requirements, found on the *Directive 056* Web page, should be used as a reference document. It describes the type of information that should be submitted with a nonroutine application.

Section 6.9 provides discussion of the technical criteria for all pipeline applications.

## 6.8 Participant Involvement Requirements

- 13) The applicant must ensure that the requirements set out in Section 2 are met for the radius set out in Table 6.1 and Table 6.2.
- 14) The applicant must meet the information requirements as part of personal consultation and notification for all pipeline licence applications (Section 2).
- 15) The applicant must provide information packages to those persons set out in Table 6.1 and Table 6.2 and be prepared to discuss the project if requested by anyone who was sent an information package.
  - a) If personal consultation is required, the applicant must
    - i) provide a written project-specific information package, which must meet the minimum information requirements described in Section 2 and include any other information to assist in understanding the proposed development;
    - ii) provide the letter from the Chairman of the ERCB;
    - iii) provide the ERCB brochure *Understanding Oil and Gas Development in Alberta*;
    - iv) provide the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*;
    - v) provide the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*; and
    - vi) offer copies of all current ERCB EnerFAQs publications as set out on the ERCB Web site.

- b) If notification is required, the applicant must provide the applicant's project-specific information package and the letter from the Chairman of the ERCB and offer copies of
  - i) the ERCB brochure *Understanding Oil and Gas Development in Alberta*;
  - ii) the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*;
  - iii) the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*; and
  - iv) all current ERCB EnerFAQs publications as set out on the ERCB Web site.
- 16) The applicant must indicate any outstanding concerns/objections by checking the appropriate bold response on Schedule 3 to indicate a nonroutine application.
  - a) The applicant must also include a written summary of the outstanding issues for ERCB review and consideration (Section 3.4), including a discussion as to how the applicant intends to mitigate the issues raised.
  - b) The applicant and the objector are expected to consider using the ERCB's Appropriate Dispute Resolution (ADR) program to mitigate outstanding concerns/objections (Section 2).
- 17) The ERCB does not prescribe the geographical area the applicant must investigate for industry notification. However, the applicant is expected to discuss the proposal with licensees of similar pipelines.
  - a) The applicant is expected to provide interested oil and gas reserve owners and licensees with a written overview of the proposed pipeline. The onus is then on these parties to raise any concerns/objections to the proposal with the applicant and the ERCB. The ERCB expects this contact to precede public consultation and notification.
- 18) The ERCB does not require applicants to acquire crossing agreements prior to submitting an application. However, they must be in place prior to construction.
- 19) Applicants must meet the requirements in Section 8.3 when planning sour gas activity where residents are located within the EPZ.
- 20) Applications for oil effluent pipelines containing greater than 10 mol/kmol H<sub>2</sub>S must meet the participant involvement requirements for Category D pipelines based on the level designation of the pipeline proposed (as defined by Table 6.3) regardless of the applied-for category/type of pipeline.
- 21) In cases of pipeline abandonment and discontinuation where no *Directive 056* licence is required to conduct the operation but the ERCB must be notified of its occurrence, applicants must advise Facilities Applications if any concerns/objections to the abandonment procedure are received.

## 6.9 Technical Requirements

The following are subsections under pipeline technical requirements and discuss various fields on Schedules 3, 3.1, and 3.2.

### 6.9.1 Emergency Response Planning

The emergency planning zone (EPZ) for pipelines containing H<sub>2</sub>S in the gas phase and operating at pipeline licence conditions is based on the release volume from the pipeline. An EPZ is also calculated for a high vapour pressure (HVP) pipeline.

Applicants are cautioned that it is a violation of privacy legislation to disclose in the public portion of a facility, pipeline, or well licence application, any personal information that was obtained for emergency response planning purposes. Such information must be provided in confidence to the ERCB in connection with the emergency response planning requirements set out in *Directive 071*.

### 6.9.2 Setback Requirements

There are specific setback distances between pipelines containing gas > 10 mol/kmol H<sub>2</sub>S and permanent dwellings, unrestricted country developments, urban centres, or public facilities.

- 22) The applicant must meet the applicable setback requirements in Table 6.3 based on the calculated H<sub>2</sub>S release volume for the proposed pipeline.

**Table 6.3. Setback requirements for gas/oil effluent pipelines containing >10 mol/kmol H<sub>2</sub>S**

Level	H <sub>2</sub> S Release Volume (m <sup>3</sup> )	Minimum Distance
1	< 300	Pipeline right-of-way
2	≥ 300 to < 2000	0.1 km to individual permanent dwellings and unrestricted country developments
		0.5 km to urban centres or public facilities
3	≥ 2000 to < 6000	0.1 km to individual permanent dwellings up to 8 dwellings per quarter section
		0.5 km to unrestricted country developments
		1.5 km to urban centres or public facilities
4	≥ 6000	As specified by the ERCB but not less than Level 3

### 6.9.3 Pipeline Leak Detection

- 23) The licensee must meet leak detection requirements for liquid hydrocarbon pipelines as described in Annex E of CSA Z662.

CSA Z662, Clause 10, has requirements for leak detection for liquid hydrocarbon, gas, and oilfield water pipelines; however, the additional leak detection requirements contained in Annex E of CSA Z662 are mandatory only for liquid hydrocarbon pipelines. Refer to the *Pipeline Regulation*, Section 9.

### 6.9.4 Steam Distribution Pipelines

Steam distribution pipelines used in the recovery of hydrocarbons from a reservoir or oil sands deposit are regulated under the *Pipeline Act* and include pipelines intended to carry steam, steam and produced fluids, or recovered steam. These pipelines require design registration by ABSA, The Pressure Equipment Safety Authority, under the *Pipeline Regulation*, but are exempt from both the *Safety Codes Act* and *Pressure Equipment Safety Regulation*. There may be situations in other types of pipelines in which produced fluids (emulsion) meet the definition of expandible fluid and require steam pipeline

design and design registration with ABSA. Refer to *Directive 077* for additional information.

24) Prior to the submission of a licence application, the design of steam distribution pipelines must satisfy the requirements of CSA Z662, Clause 14 and be registered with ABSA.

#### 6.9.5 Pipeline Discontinuation

Pipeline discontinuation is defined as the temporary deactivation of a pipeline or part of a pipeline.

25) An application is not required for pipeline discontinuation; however, for the purpose of updating ERCB records, the applicant must notify Facilities Applications by submitting a licence amendment application within 90 days of completion of the pipeline discontinuation.

Industry and public notification is not mandatory for discontinuations (see Table 6.2).

26) When discontinuing a pipeline, the licensee must ensure that

- a) proper discontinuation procedures are in place (see *Pipeline Regulation*, Section 82);
- b) cathodic protection will be maintained in working condition and monitored in accordance with the *Pipeline Regulation*, Section 53, and
- c) setback distances are retained (Table 6.3).

#### 6.9.6 Pipeline Abandonment

Pipeline abandonment is defined as the permanent deactivation of a pipeline in a manner prescribed by the *Pipeline Regulation*; this includes any measures required to ensure that the pipeline is left in a permanently safe and secure condition. This also includes the removal of related surface equipment no longer in use, including pig traps, risers, block valves, and line heaters, unless they are located within the boundaries of a facility that will continue to have other licensed equipment operating after the pipeline abandonment.

27) When abandoning a pipeline, the licensee must

- a) conduct notification with parties along the entire pipeline right-of-way and those affected by setbacks prior to any abandonment procedures (see Table 6.2);
- b) ensure that proper abandonment procedures are in place (see *Pipeline Regulation*, Section 82); and
- c) submit a licence amendment application notifying Facilities Applications of the abandonment within 90 days of the pipeline abandonment.

#### 6.9.7 Partial Pipeline Removals

The physical removal of a pipeline where crossings are not being removed is considered a partial removal.

28) When applying for a partial pipeline removal and prior to undertaking any activity, the licensee must

- a) conduct notification with parties along the pipeline right-of-way and associated setbacks (see Table 6.2),
- b) submit a routine licence amendment application for a line split and removal (line split into multiple segments showing line(s) to be removed and crossing(s) remaining in place), and
- c) file a licence amendment application within 90 days of completing the abandonment of the crossing(s) to advise the ERCB of the abandonment.

#### **6.9.8 Pipeline Resumption**

Pipeline resumption is defined as resuming operations on a discontinued pipeline or on a pipeline that has not been in active flowing service within the last 12 months to its original licensed parameters. Abandoned pipelines are not normally candidates for resumption of operation. In rare and exceptional circumstances, a licence may be granted to resume operation of an abandoned pipeline if the applicant has supported the request with a comprehensive engineering assessment.

- 29) When resuming operation of a discontinued pipeline, the licensee must ensure that
  - a) cathodic protection was maintained in accordance with CSA Z662,
  - b) there is suitable external/internal coating integrity, and
  - c) sour service requirements are met, if applicable.
- 30) The licensee must conduct personal consultation and notification if the resumption of the discontinued pipeline in conjunction with other activities results in a change to a Category D pipeline (see Table 6.2).
- 31) When resuming operation of an abandoned pipeline, the licensee must file a nonroutine application and demonstrate
  - a) compliance with personal consultation, confirmation of nonobjection, and notification requirements for all parties along the entire pipeline right-of-way and those affected by setbacks (see Table 6.2),
  - b) the integrity of the pipeline and the external/internal coating,
  - c) that sour service requirements of the most recent version of CSA Z662 are met, if applicable, and
  - d) that a comprehensive engineering assessment supports the resumption.

#### **6.9.9 Pipeline Removal**

Pipeline removal is defined as the removal of the entire pipeline, including crossings of roads, railways, and watercourses. The physical removal of a portion of a pipeline is also addressed by filing a pipeline abandonment application (Section 6.9.6).

- 32) When applying to remove a pipeline and prior to undertaking any activity, the licensee must
  - a) conduct notification with parties along the pipeline right-of-way and associated setbacks (see Table 6.2),

- b) submit a routine licence amendment application to ERCB Facilities Applications, and
- c) obtain approval prior to commencing removal operations.

#### 6.9.10 Pipeline Replacement

Pipeline replacement is defined as the replacement of an existing pipeline or a pipeline segment. An application is not required for a pipeline replacement if each individual section is less than 100 m long and

- the replaced pipe is removed,
- the work is carried out within the existing right-of-way, and
- the replacement sections are identical, of the same material, or evaluated as being equivalent or of a higher grade for the licensed purpose and operating conditions.

#### 6.9.11 Surface Pipelines

Category B, C, and D surface pipelines that are in continuous use for less than 21 days for “well testing purposes” do not require a *Directive 056* pipeline licence application.

33) The applicant must submit a *Directive 056* pipeline application for

- a) Category B, C, and D surface pipelines that are in use for less than 21 days for “purposes other than well testing,” and
- b) all surface pipelines in continuous use for more than 21 consecutive days.

If all routine application requirements are met, Category B surface pipelines for “purposes other than well testing” may be submitted as a routine *Directive 056* application.

34) A *Directive 056* pipeline application is not required for Category B, C, and D surface pipelines in continuous service for less than 21 days for well testing purposes; however, the company must obtain

- a) landowner nonobjection, and
- b) local ERCB Field Centre (*Directive 077*) consent to install and operate a surface pipeline for less than 21 days.

35) The applicant must meet all requirements of CSA Z662 and the *Pipeline Regulation*.

- a) For Category B surface pipelines, J55 API tubing and threaded joints may be used in some situations. Such applications must be submitted to ERCB Facilities Applications as a nonroutine application.

36) The applicant must submit a nonroutine application for all Category C and D surface pipelines for purposes other than well testing. The application may be submitted as nonroutine by checking “No” to question 3 in Section 2 on Schedule 3.2. The applicant must provide the following information with the application:

- a) supporting documentation to address surface pipeline requirements, in accordance with *Pipeline Regulation*, Section 21;

- b) a detailed explanation of the pipeline design that includes consideration of the downstream pipeline effects and compatibility with connecting pipelines;
- c) a description of the measures taken to protect the surface pipeline from third-party damage;
- d) information of the corrosion control, monitoring program, and mitigation measures for the proposed surface pipeline, including an assessment of any impacts that adding and later removing the flow may have on the flow regimen of the connecting pipelines; and
- e) an explanation detailing the need for the surface pipeline.

37) The applicant must submit a nonroutine application for **all** Category C surface pipelines associated with a thermal in situ oil sands operation. To submit the application as nonroutine, check “No” to question 3 in Section 2 of Schedule 3.2.

The applicant is not required to submit the nonroutine documentation as outlined in requirement 36 above if the proposed pipeline will

- a) be a permanent surface pipeline,
- b) be part of a thermal in situ operation (for example, SAGD or cyclic steam injection) to produce crude bitumen in a designated oil sands area,
- c) be made of steel,
- d) be licensed as oil effluent, and
- e) have an H<sub>2</sub>S partial pressure greater than 0.3 kPa but less than or equal to 70.0 kPa.

If all these criteria will be met, provide confirmation in writing in place of the nonroutine documentation. The application must still be filed as nonroutine.

If any of the criteria will not be met and the pipeline is Category C, submit the support documentation outlined in requirement 36.

#### **6.9.12 Calgary and Edmonton Transportation/Utility Corridors**

38) Ministerial consent from Alberta Infrastructure must be obtained prior to any government authority ordering or authorizing any operation or activity that causes a surface disturbance in the Transportation/Utility Corridors.

- a) The applicant must obtain consent from Alberta Infrastructure prior to submitting an application to ERCB Facilities Applications.

#### **6.9.13 Line Splits**

A line split occurs when one line segment is split into multiple line segments that are each assigned an individual line number.

39) The licensee must file a licence amendment application and receive approval before beginning field work to split a line.

## **6.9.14 Base Plan Maps and Right-of-Way Plans**

### **6.9.14.1 Base Plan Maps**

The ERCB uses pipeline base maps to show the approximate location of licensed pipelines under its jurisdiction. The maps are produced on an individual township basis; if a township is very congested, a larger scale is used, e.g., quarter section. The base plan maps show the best pipeline location data available to the ERCB and identify the licence number of each pipeline. Under no circumstances should these maps be used for physically locating pipelines, as they only provide a general representation of the pipeline route.

Base plan map(s) must be submitted for new construction, abandonment, discontinuation, removal, resumption, change of substance (when the licence numbers change), pipeline(s) not constructed, and pipeline installations.

- 40) The most recent pipeline base plan map must be obtained from ERCB Information Services prior to submitting a pipeline application.
- 41) Pipeline base plan maps must be used to identify other pipeline licensees that must be contacted for pipeline crossing agreements.
- 42) All markings on the map indicating pipelines should be made with a pen no thicker than 0.7 mm.
- 43) The applicant must complete the following tasks and submit the applicable map with each application.
  - a) Indicate the new pipeline(s) or resumption of operation in red.
  - b) Indicate a pipeline installation by drawing a red box on the base map at the appropriate location.
  - c) Indicate pipelines to be abandoned, discontinued, not constructed, or removed in green.
  - d) Indicate installation to be abandoned or removed in green.
  - e) Indicate the existing pipeline for a line split in red. In blue or black put a line across the existing pipeline where the line split is located
  - f) Indicate in red the existing pipeline for a substance change. Cross off the old licence number in green.

### **6.9.14.2 Right-of-Way Plans**

- 44) Applicants are required to submit a right-of-way plan along with base plan maps for pipeline applications that involve new construction or an amendment to change or correct the pipeline route/right-of-way.

The ERCB will use the right-of-way plans to digitize the location of the pipeline. The right-of-way for the line(s) being applied for needs to be distinguishable from other pipeline right-of-ways on the right-of-way plans. Right-of-ways that are adjacent to, or being crossed by, the proposed pipeline should indicate the licence numbers of any pipelines within the right-of-way.

These plans can be represented as either individual ownership plans (IOPs) or as a plan of the entire route. For lengthy pipeline routes, a series of pages is preferred to a single small-scale map that shows the entire route. Use of a scale smaller than 1:25 000 might not adequately represent topographic or watercourse crossing details in certain circumstances.

#### **6.9.15 Maximum Operating Pressure Increase**

- 45) The applicant/licensee must determine if any of the following is affected by an increase in MOP and take the appropriate mitigative action to ensure continued compliance:
  - a) testing requirements to confirm capability for the increased pressure
  - b) overpressure protection on upstream and downstream pipelines
  - c) pipeline class redesignation
  - d) pipeline level reclassification
  - e) potential setbacks
  - f) partial pressure of H<sub>2</sub>S (Categories C and D only)
  - g) material and standard suitability
- 46) If the applicant determines that the pipeline operation will change either the personal consultation and confirmation of nonobjection and/or the notification requirements, the applicant must initiate consultation and/or notification (see Table 6.2).

#### **6.9.16 Maximum Operating Pressure Decrease**

- 47) The applicant/licensee must determine if any of the following is affected by a decrease in MOP and take the appropriate mitigative action to ensure continued compliance:
  - a) pipeline integrity under the new MOP
  - b) pressure compatibility with upstream and downstream pipelines
  - c) pipeline level reclassification

#### **6.9.17 Substance Change**

A pipeline licence is substance specific. If a licensee intends to transport a substance other than the substance for which the pipeline is currently licensed, a licence amendment application is required. The applicant can submit one application using Schedule 3, 3.1, and 3.2, with the option to change all lines on one licence or move select lines to a new or existing licence.

- 48) When changing the substance, the applicant/licensee must consider the following and take appropriate mitigative actions to ensure continued compliance:
  - a) pressure-testing requirements
  - b) pipeline level reclassification
  - c) impact on setbacks and personal consultation and notification (see Table 6.2)

- d) depth of pipeline cover
- c) pipeline warning sign requirements—the licensee must update pipeline warning signs to reflect the new substance before operations begin
- f) potential class redesignation
- g) ERP changes (*Directive 071*)
- h) corrosion monitoring and mitigation—if the substance is corrosive, effective internal corrosion mitigation and monitoring programs must be implemented according to Pipeline Regulation, Section 54, and CSA Z662

#### **6.9.18 Connecting Pipelines with Different Substances**

If a pipeline transporting natural gas is to be tied into a pipeline transporting oil effluent or vice versa, a routine pipeline application may be submitted provided that no H<sub>2</sub>S is present in either substance.

49) If connecting pipelines are to transport any substance other than natural gas or oil effluent containing no H<sub>2</sub>S, the applicant must file a nonroutine application by selecting “No” to question 3 in Section 2 on Schedule 3.2. Questions regarding the requirements for submitting technical documentation may be directed to the ERCB Pipeline Technical Operations Section prior to application submission.

For pipelines licensed for sour natural gas (SG), the ERCB will only approve an application if the connecting pipeline is also licensed for SG. For pipelines licensed for HVP products (HV), the ERCB will only approve an application if the connecting pipeline is also licensed for HV.

The ERCB will not approve an application for a pipeline with H<sub>2</sub>S that is to tie into an existing pipeline with a lower H<sub>2</sub>S content than that of the proposed pipeline unless a blending scheme is proposed (see Section 6.9.27).

#### **6.9.19 Liner Type**

A liner is defined as a tubular product that is inserted into buried pipeline to form

- a corrosion-resistant barrier, or
- a separate free-standing pressure-containing pipe.

The applicant may choose to install a liner in a pipeline to improve or maintain the integrity of the pipeline.

50) The applicant must identify the correct type of liner for the substance transported in the pipeline.

51) To file a routine application, the applicant must use one of the following liner types:

- a) free-standing fibreglass—considered pressure containing
- b) free-standing reinforced composite liners—considered pressure containing. Refer to *Directive 056's Process for Pipeline Applications of Fiberspar, Flexpipe, flexcord, or FlexSteel Composite Pipes*, available on the *Directive 056* Web page for limitations on routine filing.

- c) free-standing polyethylene liners—considered pressure containing
- d) expanded polyethylene liners—considered to be internal corrosion barriers and not pressure containing

52) Expanded polyethylene liners and the supporting pressure-containing pipe must be designed and pressure tested according to current CSA standards. Consideration should be given to temperature design and hydrocarbon absorption. For sour service, the supporting pressure-containing pipe must meet sour service requirements.

53) For all other liner types or new technologies, the applicant must file a nonroutine pipeline licence amendment.

A routine pipeline licence amendment can be filed for a liner removal by selecting “Other (specify)” as the licence amendment type.

Notification is not mandatory for liner installations or removals (see Table 6.2).

#### 6.9.20 Sour Service Pipelines

There are specific requirements in Clause 16 of CSA Z662 for the design, materials, construction, operation, and maintenance of sour service pipelines. Sour service is defined as:

- for pipeline systems containing a gas phase, service in which the H<sub>2</sub>S partial pressure exceeds 0.3 kPa at the licensed MOP; and
- for pipeline systems not containing a gas phase (gas-free liquid pipeline systems), service in which the effective H<sub>2</sub>S partial pressure exceeds 0.3 kPa at the bubble point absolute pressure.

Multiphase (oil effluent) pipelines can include lines containing gas or that are gas free, depending on the fluids involved, and therefore can occur under either definition of sour service.

The gas definition is used for any service containing a gas phase. This would include gas pipelines and could include multiphase (oil effluent) pipelines and acid gas pipelines.

The gas-free liquid definition would be used for liquid pipelines that have no separate gas phase at operating conditions, but contain dissolved gas in the liquid that would evolve at the bubble point. This could apply to such service situations as oilfield water, crude oil, water-oil emulsions, or other liquids containing dissolved H<sub>2</sub>S.

54) The applicant must calculate the H<sub>2</sub>S partial pressure or effective partial pressure to determine the need to meet CSA Z662 sour service requirements based on the following criteria:

- a) For pipeline systems containing gas, partial pressure can be determined by multiplying the mole fraction (mol/kmol divided by 1000) of H<sub>2</sub>S in the gas by MOP (kPa). Sour service requirements must be met if the H<sub>2</sub>S gas partial pressure exceeds 0.3 kPa at the licensed MOP.
- b) For gas-free liquid systems, the effective H<sub>2</sub>S partial pressure can be determined by the method in *NACE MR0175/ISO 15156, Part 2, Annex C*. Sour service requirements must be met if the effective H<sub>2</sub>S gas partial pressure exceeds 0.3

kPa at the bubble point absolute pressure, regardless of the category and type of the pipeline.

Existing pipelines that were licensed prior to January 1, 2008, in compliance with the sour service definition of editions of CSA Z662 prior to Z662-07 may continue to operate within compliance, providing that there is no change in licensed service conditions.

Existing oil effluent pipelines with an H<sub>2</sub>S partial pressure between 0.3 and 70 kPa and licensed prior to January 1, 2008, that experience a change in service conditions resulting in an H<sub>2</sub>S partial pressure increase may continue to operate within compliance, providing that they remain an oil effluent pipeline with H<sub>2</sub>S partial pressure at or below 70 kPa.

If an amendment to an existing pipeline results in the pipeline meeting the definition of sour service and the pipeline will not continue to operate within compliance as described above, refer to *ERCB Reference Tool for Sour Service Conversion of Existing Carbon Steel Pipelines*, found on the *Directive 056* Web page. The document provides a standardized approach for the preparation, review, and approval of technical requirements for sour service conversion of existing carbon steel pipelines.

#### 6.9.21 Canadian Standards Association (CSA) Standards

If the *Pipeline Act* and *Pipeline Regulation* differ from CSA requirements, the act and regulation govern. CSA states that the materials intended for sour service must comply with the requirements of the sour service clause of the applicable CSA Z245 standard; if no applicable CSA standard exists, the current material requirements of NACE MR0175/ISO 15156 apply. Steel pipe, fittings, flanges, and valves must meet the applicable requirements of a standard or specification given in Table 5.3 of CSA Z662, with the acceptable materials and limitations indicated.

55) At a minimum for sour service pipelines, the applicant must meet the following CSA material standards:

- a) Steel Pipe—CSA Z245.1,
- b) Steel Fittings—CSA Z245.11,
- c) Steel Flanges—CSA Z245.12, and
- d) Steel Valves—CSA Z245.15.

56) For pipeline installations

- a) piping upstream and downstream of a line heater must meet CSA Z662,
- b) piping within the line heater must be designed to American Society of Mechanical Engineers (ASME) B31.3,
- c) compressor and pump stations must meet CSA Z662, and
- d) as indicated in the preface of CSA Z662, ASME B31.3 is only permissible for internal piping for compressor and pump stations.

The ERCB has created a document to aid in the interpretation of the regulatory interrelationships on pipeline systems. The *Reference Tool for Interpreting Jurisdictional Relationships for Pipeline, Pressure Equipment, and Pressure Piping* is available in *Directive 077*.

### **6.9.22 Pipelines Transporting Carbon Dioxide (CO<sub>2</sub>)**

CO<sub>2</sub> has unique properties that necessitate specific design considerations for pipelines transporting the substance. As some design considerations are not covered in CSA Z662-07, the ERCB reviews all applications to construct or amend pipelines that transport CO<sub>2</sub> to ensure that the design is based on sound engineering practices.

57) The applicant must file a nonroutine application by selecting "No" to question 3 in Section 2 on Schedule 3.2 and provide the following information with the application:

- specific operating pressure ranges and pressure drops to avoid unnecessary phase changes;
- corrosion mitigation and monitoring issues due to water content and other impurities;
- specific material considerations to minimize the risk of fracture propagation;
- ERP and dispersion modelling considerations; and
- safety precautions during pipeline operation and repair.

Direct any questions on technical documentation requirements to the ERCB Pipeline Technical Operations Section.

### **6.9.23 Stainless Steel Pipelines**

CSA Z662 does not address the use of stainless steel pipe; therefore, the ERCB reviews all applications to construct or amend pipelines that use stainless steel pipe to ensure that the design is based on sound engineering practices.

Direct any questions on technical documentation requirements to the ERCB Pipeline Technical Operations Section prior to application submission.

58) The applicant must file a nonroutine application by selecting "No" to question 3 in Section 2 on Schedule 3.2 and must attach the information set out in Table 6.5.

### **6.9.24 Injecting Natural Gas Containing H<sub>2</sub>S into a Producing Reservoir**

When a producing reservoir has an approved enhanced recovery scheme that allows the injection of natural gas containing H<sub>2</sub>S, the pipeline licensee must review the impact of the scheme operation on the pipeline materials and operating parameters.

59) The applicant must evaluate the potential for

- gas cap breakthrough,
- reclassification of existing pipeline systems due to an increase in H<sub>2</sub>S content,
- reclassification of producing wells as critical wells, and
- licence amendment applications to meet CSA sour service material requirements for the pipelines affected.

### 6.9.25 Stress Level

Stress level is defined as the stress in the wall of a pipe that is produced by the pressure of the fluids in the pipeline. This section describes the stress level calculation for steel, aluminum, and polyethylene pipeline materials. There is no stress level calculation for fibreglass or composite pipeline materials.

Stress level is calculated as a percentage using the following formulas:

- for steel or aluminum pipe material,

$$\frac{(\text{MOP kPa}) \text{ (outside diameter mm)}}{(20 \times \text{pipe specified minimum yield strength MPa}) \text{ (wall thickness mm)}}$$

- for polyethylene pipe material,

$$\frac{(\text{MOP kPa}) \text{ (outside diameter mm - wall thickness mm)}}{(20 \times \text{pipe long-term hydrostatic strength MPa}) \text{ (wall thickness mm)}}$$

60) The applicant must meet all applicable CSA Z662 design requirements.

a) For steel pipe:

- i) For any temporary or permanent surface pipeline containing greater than 10 mol/kmol H<sub>2</sub>S gas, the stress level must not exceed 50 per cent.
- ii) For buried pipelines containing greater than 10 mol/kmol H<sub>2</sub>S gas, the stress level must not exceed 60 per cent.
- iii) For all other steel pipelines, the stress level must not exceed 72 per cent unless otherwise approved by the ERCB. In this case, the applicant must file a nonroutine application.

b) For aluminum pipe, the stress level must not exceed 72 per cent unless otherwise approved by the ERCB. In this case, the applicant must file a nonroutine application.

c) For type 3408, 3608, or 3708 polyethylene pipe with a design temperature less than 23°C:

- i) For wet gas gathering, oil effluent, and low vapour pressure service, the stress level must not exceed 25 per cent.
- ii) For gas distribution, the stress level must not exceed 40 per cent.
- iii) For dry gas gathering and water service, the stress level must not exceed 50 per cent.

These limitations are not applicable for type PE80, PE100, 3710, or 4710 polyethylene pipe.

61) For all other pipeline materials and new technologies, the applicant must file a nonroutine pipeline licence application.

### 6.9.26 Pipeline Installation

A pipeline installation is defined as any equipment, apparatus, mechanism, machinery, or instrument incidental to the operation of a pipeline. This includes a compressor station,

pump station, tank farm, and pipeline loading and unloading facility associated with pipelines carrying processed (sales) product. These installations would be located downstream of a gas processing facility or battery. Category C and D line heaters are considered pipeline installations, although all other upstream facilities are licensed under Schedule 2.

- 62) When applying for a pipeline installation, the applicant must fulfill personal consultation, confirmation of nonobjection, and notification requirements for parties in accordance with Table 6.1.
- 63) Where applicable, the applicant must meet
  - a) noise requirements defined in *Directive 038*,
  - b) the requirements of *IL 88-05*,
  - c) ERCB storage requirements (see *Directive 055*), and
  - d) ERCB spacing requirements as defined in the *Oil and Gas Conservation Regulations*, Section 8.

#### **6.9.26.1 Process Flow Diagrams**

- 64) The applicant must attach a process flow diagram (PFD) for all pipeline installation applications.
  - a) The PFD must identify all existing and proposed equipment at the pipeline installation.
    - i) New equipment must be identified in the legend and annotated on the diagram.

Typical diagrams are acceptable providing that they accurately represent the actual operations of the installation and contain the correct location and applicant name.

- b) The applicant must clearly identify the following on the PFD:
  - i) process equipment
  - ii) measurement points
  - iii) storage tanks
  - iv) source(s) of all inlet/receipts and/or deliveries, including all fuel lines, flare lines, and vent points
  - v) safety equipment

#### **6.9.26.2 NO<sub>x</sub> Emissions**

If NO<sub>x</sub> emissions are present, it is the applicant's responsibility to ensure that the facility meets the *Alberta Ambient Air Quality Objectives (AAAQO)* for NO<sub>2</sub>. It is possible that facilities exempt from registration with Alberta Environment could exceed the AAAQO. It is in the company's best interest to conduct modelling to ensure that its facility will meet the AAAQO. In order to demonstrate that the facility meets the AAAQO, the ERCB may require that the applicant provide NO<sub>x</sub> modelling.

- 65) In designing its needs, the applicant must design the pipeline installation to meet the requirements set out in *IL 88-05* and Alberta Environment's *Code of Practice for Compressor and Pumping Stations and Sweet Gas Processing Plants*.

- 66) The applicant must register all compressor and pumping stations with Alberta Environment before commencing operation if the total NO<sub>x</sub> emissions are greater than 16 kg/h.
- 67) New and additional natural gas-driven reciprocating engines greater than 600 kW at full load must not emit more than 6 grams of NO<sub>x</sub> per kilowatt-hour (g/kWh).
- 68) The applicant must meet the following requirements when NO<sub>x</sub> emissions are present at facilities that require registration or approval with AENV:
  - a) Dispersion modelling must be conducted in accordance with Alberta Environment's *Air Quality Model Guideline* (<http://environment.gov.ab.ca/info/library/6709.pdf>).
  - b) Based on dispersion modelling, predicted NO<sub>2</sub> concentrations must meet the AAAQO using guidance from the *Air Quality Model Guideline*.
  - c) Standby equipment used only for emergency purposes can be excluded from dispersion modelling.
  - d) The engine exhaust stack height must be set in accordance with the direction given in *IL 88-05: Application for Approval of Natural-Gas-Driven Compressors* and Alberta Environment's *Code of Practice for Compressor and Pumping Stations and Sweet Gas Processing Plants*.
  - e) NO<sub>x</sub> emissions from steam generating units, heaters, and boilers can be excluded from dispersion modelling if their combined contribution is less than 3 per cent of the total NO<sub>x</sub> emissions.

#### 6.9.26.3 Plot Plans

- 69) A plot plan must be submitted with each pipeline installation application that clearly indicates the on-lease location of all the equipment (with the exception of valves) indicated on the PFD. It must also reflect a minimum of 100 m past the edge of the lease to demonstrate that all off-lease spacing requirements have been met (e.g., distance to a residence, water bodies, forestation, or road allowance).
- 70) The applicant is expected to meet the spacing requirements of the *Oil and Gas Conservation Regulations*, Section 8, as applicable (see Appendix 6).

#### 6.9.26.4 Noise

All pipeline installations under the ERCB's jurisdiction must meet the requirements of *Directive 038*.

A noise impact assessment (NIA) will ensure that the applicant has considered possible noise impacts before a pipeline installation is constructed or operated. The NIA predicts the expected design sound level from the pipeline installation at the nearest or most impacted residence.

- 71) Applicants must discuss noise matters with area residents during the design, construction, and operating phases of the pipeline installation.

- 72) An NIA must be completed prior to the submission of a pipeline installation application for any new permanent pipeline installation or for modifications to existing permanent pipeline installations if there is a reasonable expectation of a continuous or intermittent noise source.
  - a) For the purpose of an NIA, a permanent pipeline installation is a pipeline installation in operation for more than 2 months.
- 73) If the NIA indicates the permissible sound level will be exceeded, the applicant must consider further mitigative measures.
  - a) Where mitigative measures are not practical, the applicant must file a nonroutine licence application and explain why mitigative measures are not practical.
- 74) The ERCB expects the applicant to use a reasonable technical basis for the values presented in the NIA, such as computer modelling, field measurements of similar equipment, accepted acoustical engineering examples from literature, and calculations.
- 75) If the applicant is using manufacturer's specifications, the sound level ratings must represent free or far field conditions.
  - a) Sound level ratings at 1 m are not acceptable for inverse square law calculations.

See *Directive 038* for further discussions.

#### 6.9.27 Blending of Products

Product blending is defined as the combination of similar products with different H<sub>2</sub>S contents for the purpose of maintaining a lower H<sub>2</sub>S content in the blended stream. Blending a liquid stream with a gas stream is not permitted.

- 76) The applicant must ensure that the H<sub>2</sub>S content in the final blended stream does not exceed the licensed H<sub>2</sub>S content of the receiving pipeline.
- 77) The applicant must submit a nonroutine application and include a detailed description of the design for
  - a) flow ratio control with or without automatic shutdown, and
  - b) H<sub>2</sub>S monitoring (or flow ratio control) with automatic shutdown in accordance with the *Pipeline Regulation*, Section 14.

#### 6.9.28 Proliferation

As the proponent of a new oil or gas facility or pipeline, the applicant has already determined that the proposed project will meet its business needs. The ERCB, as the approving authority, is required to evaluate the need for the proposed project in the broader public interest. The ERCB considers this interest in terms of economic, orderly, and efficient development of Alberta's oil and gas resources.

The ERCB continues to receive strong input from the public, who are aware of the growth of resource development. The ERCB accepts the public's view that pipeline proliferation should be avoided whenever possible and practical.

Pipeline development is to be carried out in a manner that minimizes the overall impacts on the environment and public. Proliferation of pipelines occurs when new development results in greater surface disturbances and impact on the public than would be the case if existing infrastructure were used.

#### **6.9.29 ERCB Environmental Requirements**

In 1993, the ERCB issued *IL 93-09: Oil and Gas Developments Eastern Slopes (Southern Portion)*, setting guidelines and expectations for oil and gas development in this region.

78) If the proposed pipeline is to be located within the Eastern Slopes (Southern Portion), the applicant must meet the General Expectations described in *IL 93-09* by

- a) preparing development plans beyond the initial exploration stage, taking into consideration current stages such as
  - i) pool delineation (initial),
  - ii) pool delineation (subsequent), and
  - iii) pool development, and
- b) developing environmental assessments, as outlined in *IL 93-09*.

#### **6.9.30 Conservation and Reclamation Requirements**

The *Environmental Protection and Enhancement Act (EPEA)* requires that pipelines located in the white area of the province with an index of 2690 or greater (Class 1) must have an *EPEA* Conservation and Reclamation approval. Pipelines with an index value lower than 2690 (Class 2) do not require the approval.

The index is determined by multiplying the outside diameter of the pipe (in mm) times the length of the pipe (in km).

For Class 2 pipelines, notification to AENV is not required; however, AENV conservation and reclamation requirements under the *EPEA* must be met. When siting an upstream oil and gas site on private land, refer to AENV's *R&R/03-2: Siting an Upstream Oil and Gas Site in an Environmentally Sensitive Area on Private Land*.

For Class 1 pipelines, the applicant may file a routine application once the 30-day AENV notification period has expired. The ERCB will not approve a routine pipeline application if the notification period has not expired and will close the application. Nonroutine applications for which concerns or objections remain unresolved may be submitted before the 30-day expiry.

#### **6.9.31 Additional Application Requirements**

79) Applicants must review Section 8: Additional Application Requirements and meet all requirements applicable to the proposed location.

### **6.10 Audit Documentation Requirements—Schedule 3**

80) For applications selected for audit review, licensees must submit the following documents within 14 calendar days of notice of audit or within the timeframe directed by ERCB Facilities Applications.

81) From the audit documents, Facilities Applications must be able to determine that the applicant fulfilled all requirements to ensure regulatory compliance prior to filing the application.

The detailed list of audit documents below corresponds with the steps found in Schedule 3. For licence amendment applications, the applicant may submit only the audit documentation that was affected by the amendment activity.

#### **6.10.1 Step 1: Identification**

No documentation required.

#### **6.10.2 Step 2: Participant Involvement Requirements**

##### **6.10.2.1 Participant Involvement Map Requirements**

82) The licensee must submit a map(s) that illustrates

- a) the location of the pipeline/installation,
- b) the location of all parties included in the participant involvement process (e.g., residents, existing infrastructure),
- c) the area of investigation used in the personal consultation and notification program,
- d) the emergency planning zone (if applicable), and
- e) the area of investigation used in the industry notification program (if applicable).

##### **6.10.2.2 Industry Notification Requirements**

83) If industry notification occurs, the licensee must submit a record of contact with other industry parties that includes

- a) name, address, and telephone number of all parties contacted,
- b) copies of all related correspondence received, and
- c) disclosure meeting minutes that include
  - i) date of meeting,
  - ii) meeting notice and/or invitation,
  - iii) invitation list,
  - iv) names, addresses, and telephone numbers of all meeting participants, and
- d) project information presented at meetings or otherwise distributed.

##### **6.10.2.3 Personal Consultation and Notification Requirements**

84) The applicant must submit a record of the personal consultation and notification program that was conducted, using a tabular format similar to the Sample Participant Involvement Summary Form (Appendix 4).

85) The summary must include

- a) name of each party (e.g., landowner, occupant, and resident) included in the personal consultation and notification program,
- b) legal land description for each party,
- c) a description of each party's interest in the land (e.g., trapper, landowner, and resident),
- d) date and type of contact conducted with each party (e.g., telephone conversation, registered mail, personal meeting),
- e) date the ERCB brochure, *EnerFAQs No. 7*, *EnerFAQs No. 15*, and *Objecting to an Energy Resource Project* form were distributed if required,
- f) date the project-specific information package was distributed,
- g) date the required EnerFAQs package was provided, and
- h) date the confirmation of nonobjection was obtained if required.

#### **6.10.2.4 Confirmation of Nonobjection**

86) The ERCB does not require a confirmation of nonobjection to be in writing.

Confirmation of nonobjection may consist of one of the following documents, depending on the nature of the proposed development:

- a) Freehold lease agreement (Freehold also includes Federal Lands and Provincial Special Area Board Lands)
  - i) The licensee must submit a copy of the agreement, which confirms the parties involved, date of agreement, and location of land involved.
- b) Crown disposition (i.e., a signed Pipeline Lease Agreement, Individual Ownership Plat, Miscellaneous Lease, or Pipeline Installation Lease or an executed Area Operating Agreement or Temporary Field Authorization)
  - i) In the case of an Area Operating Agreement (AOA), the licensee must submit copies of the following AOA documents:
    - the "title page" (including the details of the expiry date, company name, and area of operation),
    - the "signoff page" (including when the agreement was executed), and
    - geographical map and locations list.
  - ii) For all other Crown dispositions, the licensee must submit a copy of the agreement that confirms the parties involved, the execution of the agreement (signature), the date of the agreement, and the location of the land involved.
- c) Signed document that identifies the details of the proposal (e.g., signatory page from the applicant's information package)

87) If confirmation of nonobjection is verbal, the licensee must document (log) the name of the party providing verbal nonobjection and the date on which verbal nonobjection was obtained.

#### **6.10.2.5 Information Packages**

88) The licensee must submit a copy of the project-specific information package that was distributed to the parties included in the participant involvement process.

It is not necessary to include a copy of the ERCB's documents in the audit submission; however, details of its distribution must be included.

#### **6.10.2.6 Resolved Concerns and Objections**

89) If concerns/objections were received and resolved during the course of the participant involvement process, the licensee must submit

- a record and explanation of any concerns/objections received, and
- documentation confirming the resolution of any concerns/objections.

#### **6.10.2.7 Sour Gas Planning and Proliferation**

90) If there are residents located within the EPZ of the pipeline, the applicant must submit

- the assessment of existing infrastructure required by Section 8.3.2, and
- the updated expanded project-specific information package, as described in Section 8.3.2.

#### **6.10.3 Step 3: Emergency Response Planning**

91) The licensee must keep a copy of the corporate-level ERP or, if required, the specific ERP on file for review upon request. It is not required for inclusion in the audit submission.

- The licensee must include in the audit submission a statement confirming that it has an approved corporate plan and/or that a site-specific plan will be approved prior to operations.

#### **6.10.4 Step 4: Type of Application**

No documentation required.

#### **6.10.5 Step 5: Licence Amendment Only**

92) For pipeline removal, the licensee must submit an explanation of the circumstances and provide documentation detailing that the entire pipeline, including water, rail, and road crossings, is being removed.

### **6.11 Audit Documentation Requirements—Schedule 3.2**

93) For applications selected for an audit, licensees must submit the following documents within 14 calendar days of notice of the audit or within the timeframe directed by ERCB Facilities Applications.

94) From the audit documents, Facilities Applications must be able to determine that the applicant fulfilled all requirements to ensure regulatory compliance prior to filing the application.

The detailed list of audit documents below corresponds with the steps found in Schedule 3.2. For licence amendment applications, the applicant may submit only the audit documentation that was affected by the amendment activity.

#### **6.11.1 Step 1: Identification**

No documentation required.

#### **6.11.2 Step 2: Technical Considerations**

##### **6.11.2.1 H<sub>2</sub>S Content Requirements**

95) For all pipelines, the licensee must submit a representative gas analysis.

##### **6.11.2.2 Partial Pressure**

No documentation required.

##### **6.11.2.3 CSA Z662**

96) For all pipelines, the licensee must submit

- a) a description of the methodology or process used to ensure that CSA standards are met,
- b) a list of the licensed substance and MOP of the pipeline(s) into which the proposed pipeline is tied,
- c) a description of pressure control and overpressure protection,
- d) mill certificates or other documentation to confirm that the pipe is suitable for the product being transported,
- e) specifications for the valves, flanges, and fittings,
- f) documentation of a quality assurance program to ensure that material is suitable for sour service, and
- g) a description or map showing valve locations and spacing.

##### **6.11.2.4 Corrosion**

97) If the licensee has indicated that appropriate corrosion mitigation in accordance with the requirements of CSA Z662 and the *Pipeline Regulation* is in place, the applicant must be able to provide the evaluation performed to assess the corrosivity of the pipeline and the need for corrosion mitigation.

98) If a corrosion mitigation plan has been deemed necessary, the licensee must provide

- a) a detailed summary of the corrosion mitigation plan that outlines the scheduled actions that will be conducted,
- b) a detailed summary of the monitoring plan that outlines the scheduled actions that will be conducted, and
- c) a description of the scheduled actions that will be conducted to review the monitoring results and assess mitigation plan performance.

#### **6.11.2.5 Leak Detection**

99) For liquid hydrocarbon pipelines that require leak detection, the licensee must submit a detailed description of procedures for leak detection, including frequency of right-of-way inspections, material balance parameters, and confirmation that employees have had or will receive training (see CSA Z662, Annex E).

#### **6.11.2.6 Steam Pipelines**

100) The licensee must submit documentation verifying that the pipeline design was registered with ABSA.

#### **6.11.2.7 Production Stream Blending**

No documentation required.

#### **6.11.2.8 Pipeline Installations**

101) For all pipeline installations, the licensee must submit

- a) a wellhead or inlet gas analysis representative of the inlet stream,
- b) a PFD that meets the requirements of Section 6.9.26.1,
- c) a site-specific plot plan showing the placement of and distances between equipment, and
- d) a list of each type of meter proposed for each measurement point and their locations.

102) For compressor/pump stations, the licensee must also submit

- a) manufacturer's specifications for the proposed unit that confirms emission ratings, unit size, and driver type,
- b) an NIA prepared in accordance with *Directive 038*,
- c) a breakdown and total of all sources of NO<sub>x</sub> emissions in kg/h, and
- d) documentation to demonstrate that the exhaust stack height requirements of *IL 88-05* are met if total NO<sub>x</sub> emissions are less than 16 kg/h.

103) For tank farms/oil loading and unloading terminals where products and materials will be stored on site, the licensee must also submit a list of materials that will be stored and a description of the storage method(s), including details of

- a) design and construction,
- b) leak detection,
- c) secondary containment,
- d) weather protection, and
- e) primary containment device and size.

104) For line heaters, the licensee must also submit documentation verifying that the line heater is designed to *Safety Codes Act* requirements.

### **6.11.3 Step 3: Natural Gas/Oil Effluent Pipelines > 10 mol/kmol H<sub>2</sub>S**

#### **6.11.3.1 Release Volume and Level Designations**

105) For natural gas and oil effluent pipelines greater than 10 mol/kmol H<sub>2</sub>S, the licensee must submit

- a) the input parameters used to calculate the potential H<sub>2</sub>S release volume,
- b) representative tie-in schematics of ESD valves, and
- c) a system map showing ESD and check valve locations.

#### **6.11.3.2 Injection**

106) If injecting into a producing reservoir, the licensee must give an explanation as to the impact the scheme operation will have on the pipeline material and operating parameters.

### **6.11.4 Step 4: Substance Change, H<sub>2</sub>S Increase, MOP Increase, and Liner Installation Only**

#### **6.11.4.1 Substance Change**

107) The licensee must submit documentation that

- a) confirms that the pipe, valves, flanges, and fittings are suitable for the new substance,
- b) confirms that the depth of cover is sufficient (HVP pipelines only), and
- c) demonstrates the integrity and suitability of the pipeline for the proposed change and the proposed procedure for implementing the change (i.e., does it meet current code and regulation requirements?).

#### **6.11.4.2 MOP Change/H<sub>2</sub>S Change**

108) The licensee must submit

- a) documentation verifying that the pipe, valves, flanges, and fittings are suitable for the new MOP,
- b) a detailed evaluation of the integrity and suitability of the pipeline for the proposed change and the proposed procedure for implementing the change (e.g., does it meet current code and regulation requirements?), and
- c) pressure test charts.

#### **6.11.4.3 Liner Installation**

109) The licensee must submit liner specifications and pressure test charts if available.

### **6.11.5 Step 5: Resumption, Discontinuation, and Abandonment Only**

#### **6.11.5.1 Pipeline Resumption**

110) For resuming operation of a pipeline, the licensee must

- a) submit pressure test charts,

- b) submit documentation to verify the depth of cover (HVP only),
- c) provide a record of cathodic protection (cathodic protection survey),
- d) provide a record of the medium left in pipeline(s),
- e) provide the pipeline external coating integrity results,
- f) ensure that sour service requirements are met (e.g., mill certificates), and
- g) submit a detailed evaluation of the integrity and suitability of the pipeline for the proposed change and the proposed procedure for implementing the change (i.e., does it meet current code and regulation requirements?).

#### **6.11.5.2 Pipeline Discontinuation**

- 111) For pipeline discontinuation, the licensee must submit
  - a) a description of the method used to discontinue the pipeline(s),
  - b) a record of the medium left in the pipeline(s), and
  - c) documentation to confirm that cathodic protection will be maintained.

#### **6.11.5.3 Pipeline Abandonment**

- 112) For pipeline abandonment, the licensee must submit
  - a) a description of the method used to abandon the pipeline(s), and
  - b) a record of the medium left in the pipeline(s).

#### **6.11.5.4 Surface Facility Reclamation**

No documentation required.

#### **6.11.6 Step 6: Environmental Requirements**

##### **6.11.6.1 Questions 1, 2, and 3**

No documentation required.

##### **6.11.6.2 Transportation/Utility Corridor**

- 113) The licensee must submit documentation confirming that the pipeline/installation has received Ministerial Consent from *Alberta Infrastructure*.

##### **6.11.6.3 ERCB Environmental Requirements**

- 114) The licensee must submit all documentation outlined in *IL 93-9*, if applicable.

Table 6.4 provides a summary of the documents required for audit submission. Refer to the sections cited for full details. The ERCB reserves the right to request the submission of information not listed below if it would assist in the review of an application. If a nonroutine application is proceeding to a hearing, the ERCB may require that the applicant submit the entire audit package for review.

<b>6.10.2.7 Sour Gas Planning and Proliferation</b>				The assessment of existing infrastructure required in Section 8.3.2 if there are residents located within the EPZ of the pipeline
				The additional project-specific information package details identified in Section 8.3.2
<b>6.10.3 Step 3: Emergency Response Planning</b>				Statement confirming that a corporate or specific plan will be in place prior to operation
<b>6.10.5 Step 5: Licence Amendment Only</b>				Removal: documentation confirming that the entire line, including water, rail, and road crossings, is being removed
<b>6.11 SCHEDULE 3.2: Technical/Environmental Information</b>				
<b>6.11.2 Step 2: Technical Considerations</b>				
<b>6.11.2.1 Question 1: H<sub>2</sub>S Content Requirements</b>				A gas analysis
<b>6.11.2.3 Question 3: CSA Z662</b>				Description of the methodology or process used to ensure CSA standards are met
				List of the licensed substance and MOP of the pipeline(s) into which the proposed pipeline is tied
				Description of overpressure protection
				Mill certificates or other documentation to confirm that the pipe is suitable for the product being transported
				Specifications for the valves, flanges, and fittings
				Documentation of a quality assurance program to ensure that material is suitable for sour service
				Description or map showing valve locations and spacing
<b>6.11.2.4 Question 4: Corrosion</b>				Evaluation performed to assess the corrosivity of the pipeline and the need for mitigation
				If a corrosion mitigation plan has been deemed necessary, <ul style="list-style-type: none"> <li>• a detailed summary of the corrosion mitigation plan that outlines the scheduled actions that will be conducted,</li> <li>• a detailed summary of the monitoring plan that outlines the scheduled actions that will be conducted, and</li> <li>• a description of the scheduled actions that will be conducted to review the monitoring results and assess mitigation plan performance</li> </ul>
<b>6.11.2.5 Question 5: Leak Detection</b>				A detailed description of procedures for leak detection, including frequency of right-of-way inspections, material balance parameters, and confirmation that employees have or will have training
<b>6.11.2.6 Question 6: Steam Pipelines</b>				Documentation verifying that the pipeline design was registered with ABSA
<b>6.11.2.7 Question 7: Production Stream Blending</b>				No documentation required

(continued)

**Table 6.4. Pipeline application audit checklist (continued)**

Section No.	Y	N	N/A	Audit Documents
<b>6.11.2.8 Question 8: Pipeline Installations</b>				
				Wellhead or inlet gas analysis
				Process flow diagram (PFD)
				Site-specific plot plan
				List of each type of meter proposed for each measurement point and their location
				For facilities where the NO <sub>x</sub> emissions are less than 16 kg/h, the licensee must submit documentation or a schematic diagram for each source stacks, demonstrating the stack height is 1.2 times the peak building height.
				If modelling was conducted, the licensee must submit <ul style="list-style-type: none"> <li>• documents that clearly show that dispersion modelling was conducted in accordance with the <i>Alberta Air Quality Model Guideline</i>;</li> <li>• the source parameters, locations, elevations and NO<sub>x</sub> emission rates for all sources;</li> <li>• predicted normal and maximum ground-level NO<sub>x</sub> concentrations;</li> <li>• the name of the dispersion model that was used;</li> <li>• description of meteorological data used; and</li> <li>• terrain map of the study area</li> </ul>
				Manufacturer specifications for the proposed unit that confirm emission ratings, unit size, and driver type
				A noise impact assessment
				A breakdown and total of all sources of NO <sub>x</sub> emissions
				Documentation that storage requirements are met
				Documentation that the line heater is designed to <i>Safety Codes Act</i> requirements
<b>6.11.3 Step 3: Natural Gas/Oil Effluent Pipelines &gt; 10 mol/kmol H<sub>2</sub>S</b>				
<b>6.11.3.1 Questions 1, 2, and 3: Release Volume and Level Designations</b>				
				Input parameters used to calculate the potential H <sub>2</sub> S release volume
				Representative tie-in schematics of ESD valves
				A system map showing ESD and check valve locations
<b>6.11.3.2 Question 4: Injection</b>				
				An explanation as to the impact the scheme operation will have on the pipeline material and operating parameters
<b>6.11.4 Step 4: Substance Change, H<sub>2</sub>S Increase, MOP Increase, and Liner Installation Only</b>				
<b>6.11.4.1 Question 1: Substance Change</b>				
				Documentation that confirms that the pipe valves, flanges, and fittings are suitable for the new substance
				Documentation that confirms that the depth of cover is sufficient (HVP pipelines only)
				Documentation that demonstrates the integrity and suitability of the pipeline for the proposed change and the proposed procedure for implementing the change

(continued)

**Table 6.4. Pipeline application audit checklist (concluded)**

Section No.	Y	N	N/A	Audit Documents
<b>6.11.4.2 Question 1: MOP Change/H<sub>2</sub>S Change</b>				
				Documentation verifying that the pipe, valves, flanges, and fittings are suitable for the new MOP
				A detailed evaluation of the integrity and suitability of the pipeline for the proposed change and the proposed procedure for implementing the change
				Pressure test charts
<b>6.11.4.3 Question 2: Liner Installation</b>				
				Liner specifications and pressure test charts
<b>6.11.5 Step 5: Resumption, Discontinuation, and Abandonment Only</b>				
<b>6.11.5.1 Questions 1a and 1b: Pipeline Resumption</b>				
				Pressure test charts
				Documentation to verify the depth of cover (HVP only)
				A record of cathodic protection (cathodic protection survey)
				A record of medium left in pipeline
				Pipeline external coating integrity results
				Documentation to ensure that sour service requirements are met
				A detailed evaluation of the integrity and suitability of the pipeline for the proposed change and the proposed procedure for implementing the change
<b>6.11.5.2 Question 2: Pipeline Discontinuation</b>				
				A description of the method used to discontinue the pipeline
				A record of the medium to be left in the pipeline
				Documentation to confirm that cathodic protection will be maintained
<b>6.11.5.3 Question 3: Pipeline Abandonment</b>				
				A description of the method used to abandon the pipeline
				A record of the medium to be left in the pipeline
<b>6.11.6 Step 6: Environmental Requirements</b>				
<b>6.11.6.2 Question 4: Transportation/Utility Corridor</b>				
				Documentation confirming that Ministerial Consent from Alberta Infrastructure has been obtained
<b>6.11.6.3 Question 5: ERCB Environmental Requirements</b>				
				All documentation outlined in <i>IL 93-09</i> , if applicable.

Table 6.5 provides a summary of documents required for nonroutine application submission by step and question. Please refer to Sections 6.11.1 through 6.11.3 for full details.

**Table 6.5. Pipeline application nonroutine checklist**

Question No.	Y	N	N/A	Nonroutine Submissions
<b>SCHEDULE 3: Pipeline Licence Application</b>				
<b>Step 2: Participant Involvement Requirements</b>				
<b>Question 1: Personal consultation, confirmation of nonobjection, and notification requirements have been met—Public</b>				
				The participant involvement summary of all personal consultation and notification that have been completed
				Name, address, telephone number, and legal land description of participants for which personal consultation and notification requirements have not been completed
				Detailed explanation of why all personal consultation and nonobjection requirements cannot be completed
				Detailed explanation of why all notification requirements cannot be completed
				An explanation of how you would like the ERCB to proceed with this application
<b>Question 1: Personal consultation, confirmation of nonobjection, and notification requirements have been met—Industry</b>				
				Record of contact with industry parties conducted
				Copies of correspondence between parties
				Minutes of meetings held
				Copies of information distributed
				A summary of parties for which industry notification has not occurred
				A detailed explanation of why all industry notification requirements were not completed
				An explanation of how you want the ERCB to proceed with this application
<b>Question 2: There are outstanding objection/concerns related to this application</b>				
				Name, address, telephone number, and legal land description of participant(s) with outstanding concerns/objections
				Approximate distance from the project to the land and residence, if applicable, of participant(s) with outstanding concerns/objections.
				Copy of the written concern/objection (or summary of issues if not available)
				A chronology of the participant involvement program conducted with the party
				Explanation of how you want the ERCB to proceed with your application
				A discussion of steps taken to mitigate the outstanding concerns/objection
				Copy of the applicant's project-specific information package
				List of other documents distributed
				Documentation in support of the Battle Lake application requirements (Section 8)
				If there are residents within the EPZ, you must also attach <ul style="list-style-type: none"> <li>• the assessment of existing infrastructure required by Section 8.3.2</li> <li>• the updated expanded project-specific information package, as described in Section 8.3.2</li> <li>• A copy of an area plan described in Section 8.3.3 if it was completed</li> </ul>

(continued)

Table 6.5. Pipeline application nonroutine checklist (continued)

Question No.	Y	N	N/A	Nonroutine Submissions
<b>Step 5: Licence Amendment Only</b>				
Liner Type "Other": a product specification sheet for the grade of liner material being installed and a detailed explanation				
<b>SCHEDULE 3.2: Technical/Environmental Information</b>				
<b>Step 2: Technical Considerations</b>				
<b>Question 3: The pipeline meets all current applicable CSA Z662 standards</b>				
A detailed explanation of what CSA Z662 standards are not being met and why				
A detailed technical assessment that demonstrates how design, construction, and operational considerations have addressed public safety and environmental concerns				
All applicable audit documents required by Section 6.11.2.3				
For Category C or D surface pipeline:				
<ul style="list-style-type: none"> <li>• a detailed technical assessment that demonstrates how design, construction, and operational considerations described in Section 21 of the <i>Pipeline Regulation</i> will be met</li> <li>• a detailed explanation of the pipeline design, including consideration of the effects on downstream pipelines and compatibility with connecting pipelines</li> <li>• a description of the measures taken to protect the surface pipeline from third-party damage</li> <li>• information on the corrosion control, monitoring program, and mitigation measures for the proposed surface pipeline, including assessing any impacts that adding and later removing the flow may have on the flow regimen of the connection pipelines, and</li> <li>• an explanation detailing the need for the surface pipeline</li> </ul>				
For Category C surface pipelines associated with a thermal in situ oil sands operation, confirm in writing that the proposed pipeline will				
<ul style="list-style-type: none"> <li>• be a permanent surface pipeline,</li> <li>• be a part of a thermal in situ operation (for example, SAGD or cyclic steam injection) to produce crude bitumen in a designated oil sands area,</li> <li>• be made of steel,</li> <li>• be licensed as oil effluent, and</li> <li>• have an H<sub>2</sub>S partial pressure greater than 0.3 kPa but less than or equal to 70.0 kPa.</li> </ul>				
If you cannot confirm that these criteria will be met, submit the support documentation for a Category C or D surface pipeline, as outlined above.				
For CO <sub>2</sub> pipelines:				
<ul style="list-style-type: none"> <li>• specific operating pressure ranges and pressure drops to avoid unnecessary phase changes,</li> <li>• corrosion mitigation and monitoring issues due to water content and other impurities,</li> <li>• specific material consideration to minimize risk of fracture propagation,</li> <li>• ERP and dispersion modelling considerations, and safety precautions during pipeline operation and repair</li> </ul>				

(continued)

**Table 6.5. Pipeline application nonroutine checklist (continued)**

Question No.	Y	N	N/A	Nonroutine Submissions
<b>Question 4: Prior to operations, procedures for corrosion mitigation, monitoring, evaluation, and record keeping will be implemented</b>				
				Explanation of why a corrosion program is not being implemented
				Detailed technical assessment that demonstrates why the requirements of the current CSA Z662 standard and <i>Pipeline Regulation</i> are not being met
				All applicable audit documentation required by Section 6.11.2.4
<b>Question 5: The liquid hydrocarbon pipeline meets current leak detection requirements</b>				
				Explanation of why leak detection requirements are not being met
<b>Question 6: The design of the steam distribution line is registered with ABSA</b>				
				Detailed explanation of why the design requirements will not be met
<b>Question 7: Production streams with different H<sub>2</sub>S contents will be blended</b>				
				Detailed description of two independent techniques to ensure that the licensed H <sub>2</sub> S content in the receiving pipeline is not exceeded, including <ul style="list-style-type: none"> <li>• a detailed description of the design for flow ratio control with or without automatic shutdown, and</li> <li>• a detailed description of H<sub>2</sub>S monitoring (or flow ratio control) with automatic shutdown</li> </ul>
<b>Question 8: The pipeline installation meets all applicable standards</b>				
				Detailed explanation of the requirements not being met and why
				A detailed technical assessment that demonstrates how design, construction, and operational considerations have addressed public safety and environmental concerns
				All applicable audit documents required by Section 6.11.2.8
<b>Step 3: Natural Gas/Oil Effluent Pipelines &gt; 10 mol/kmol H<sub>2</sub>S</b>				
<b>Question 2: This application will change the level designation of this pipeline or a connecting pipeline</b>				
				A representative tie-in schematics of ESD valves
				Map showing <ul style="list-style-type: none"> <li>• the levels for the pipeline system and the segments that are being revised, and</li> <li>• all residences and other developments with the notification distances</li> </ul>
				Input parameters used to calculate the potential release volume of all affected segments
				Documentation verifying that personal consultation, nonobjection, and notification requirements have been met for all affected pipeline segments and that a revised ERP, if required, has been submitted
				A system map showing ESD and check valve locations
<b>Question 3: The setback requirements have been met</b>				
				Detailed explanation of why setback requirements will not be met
				Map showing all residences and other developments within the notification distances and indicating where setback have not been met
<b>Question 4: The pipeline will inject natural gas containing H<sub>2</sub>S into a producing reservoir</b>				
				Explanation that accounts for the effect the reservoir fluid composition may have on injection or producing wells and producing pipelines
				Detailed plan of steps that need to be taken to reclassify existing wells and pipelines

(continued)

**Table 6.5. Pipeline application nonroutine checklist (continued)**

Question No.	Y	N	N/A	Nonroutine Submissions
				Evidence that the potential for gas cap breakthrough has been evaluated
<b>Step 4: Substance Change, H<sub>2</sub>S Increase, MOP Increase, and Liner Installation Only</b>				
<b>Question 1: The presence of H<sub>2</sub>S, an increase in MOP, or a substance change will reclassify the pipeline to Category C or D</b>				
				<p>For an increase in H<sub>2</sub>S or MOP and a change from Category B to C or D:</p> <ul style="list-style-type: none"> <li>• details of any required material testing or documentation confirming material and component suitability for sour service</li> <li>• evidence that <ul style="list-style-type: none"> <li>– weld procedures are suitable for service conditions</li> <li>– weld testing requirements have been satisfied</li> <li>– hydrostatic testing requirements have been satisfied</li> </ul> </li> <li>• detailed explanation of compatibility with connecting pipelines</li> <li>• engineering assessment demonstrating compliance with sour service requirements of CSA Z662, as described in the <i>Reference Tool for Sour Service Conversion of Existing Carbon Steel Pipelines</i>, found on the <i>Directive 056</i> Web page</li> </ul>
				<p>For an increase in H<sub>2</sub>S or MOP and a change from Category C to D (natural gas with H<sub>2</sub>S only):</p> <ul style="list-style-type: none"> <li>• engineering assessment following the additional criteria for sour service conversion involving gas with greater than 10 moles of H<sub>2</sub>S per kilomole of natural gas and demonstrating pipeline integrity, as described in the <i>Reference Tool for Sour Service Conversion of Existing Carbon Steel Pipelines</i>, found on the <i>Directive 056</i> Web page</li> <li>• evidence demonstrating hydrostatic testing requirements have been satisfied</li> <li>• detailed explanation of compatibility with connecting pipelines</li> </ul>
				<p>For a change in substance to HVP, evidence of</p> <ul style="list-style-type: none"> <li>• conformance with the requirements for HVP pipeline design, operation, and change of service as contained in CSA Z662 and the <i>Pipeline Act and Regulation</i></li> <li>• verification of pipeline integrity</li> </ul>
<b>Question 2: The liner is being installed due to internal corrosion, external corrosion, or other</b>				
				If Other, submit liner specifications and a pressure test chart and attach a detailed explanation of why the liner is required
<b>Step 5: Resumption, Discontinuation, and Abandonment Only</b>				
<b>Question 1a: The pipeline you are applying to resume operation of was discontinued in accordance with ERCB requirements</b>				
				Detailed information confirming the integrity of the pipeline (external/internal)
				A comprehensive engineering assessment that supports the resumption
				Documentation as specified in Pipeline Applications—Checklist for Minimum Technical Requirements in Section 6.7.1
				If this pipeline was abandoned, documentation that demonstrates compliance with participant involvement requirements for all parties along the entire right-of-way and those affected by setbacks
<b>Question 1b: The integrity of the discontinued pipeline has been verified</b>				
				Explanation of why all necessary work to verify the integrity of the pipeline has not been undertaken

(continued)

**Table 6.5. Pipeline application nonroutine checklist (concluded)**

Question No.	Y	N	N/A	Nonroutine Submissions
				Documentation as specified in Pipeline Applications—Checklist for Minimum Technical Requirements in Section 6.7.1
<b>Question 2: The pipeline was discontinued in accordance with ERCB requirements</b>				
				Explanation of why the pipeline was not discontinued in accordance with the applicable ERCB requirements
<b>Question 3: The pipeline was abandoned in accordance with ERCB requirements</b>				
				Explanation of why the pipeline was not abandoned in accordance with the applicable ERCB requirements
<b>Step 6: Environmental Requirements</b>				
<b>Question 3: Application has been made to AENV for Conservation and Reclamation approval (white area only)</b>				
				Detailed explanation of why Conservation and Reclamation (C&R) approval has not been applied for
<b>Question 4a: If YES, the pipeline/installation has ministerial consent from Alberta Infrastructure</b>				
				Explanation of why ministerial consent has not yet been received
<b>Question 5: The proposed pipeline/pipeline installation meets ERCB environmental requirements</b>				
				A detailed explanation of why the pipeline/pipeline installation does not meet ERCB environmental requirements and what measures will be in place to ensure that the facility will not have a negative impact on the environment

# Directive 056 – Schedule 3

## Pipeline Licence Application

DAY      MONTH      YEAR

ERCB APPLICATION NUMBER

APPLICANT'S REFERENCE

### 1. IDENTIFICATION

Company Name \_\_\_\_\_

Applicant BA Code \_\_\_\_\_

Application Type:  Pipeline  Installation

### 2. PARTICIPANT INVOLVEMENT REQUIREMENTS

1. Personal consultation, confirmation of nonobjection, and notification requirements have been met ..... Public YES  NO   
 Industry YES  NO

2. There are outstanding objections/concerns related to this application ..... YES  NO

3a. Distance to nearest residence ..... km

3b. Distance to nearest surface development (pipeline installations only) ..... km

### 3. EMERGENCY RESPONSE PLANNING

1. The applicant will meet ERCB requirements for emergency response planning ..... YES   
 2a. The pipeline requires a new emergency response plan ..... YES  NO   
 2b. The pipeline requires an amendment to an existing emergency response plan ..... YES  NO   
 3a. Maximum calculated emergency planning zone ..... km  
 3b. Number of surface developments in the emergency planning zone .....

### 4. TYPE OF APPLICATION

Category Type \_\_\_\_\_

New construction  Unlicensed line  Temporary surface pipeline (1 year maximum) In use until \_\_\_\_\_ (MONTH-YEAR)  
 New pipeline/installation licence  Addition to existing licence number P \_\_\_\_\_

Substance change

Original licence number P \_\_\_\_\_

Substance code \_\_\_\_\_

To existing licence number P \_\_\_\_\_  
 To new licence  
 Entire licence

Licence amendment

Licence number P \_\_\_\_\_

### 5. LICENCE AMENDMENT ONLY

MOP increase  
 MOP decrease  
 Resumption  
 Liner Installation

Discontinuation  
 Abandonment  
 Removal

Not constructed  
 Flow reversal  
 H<sub>2</sub>S increase

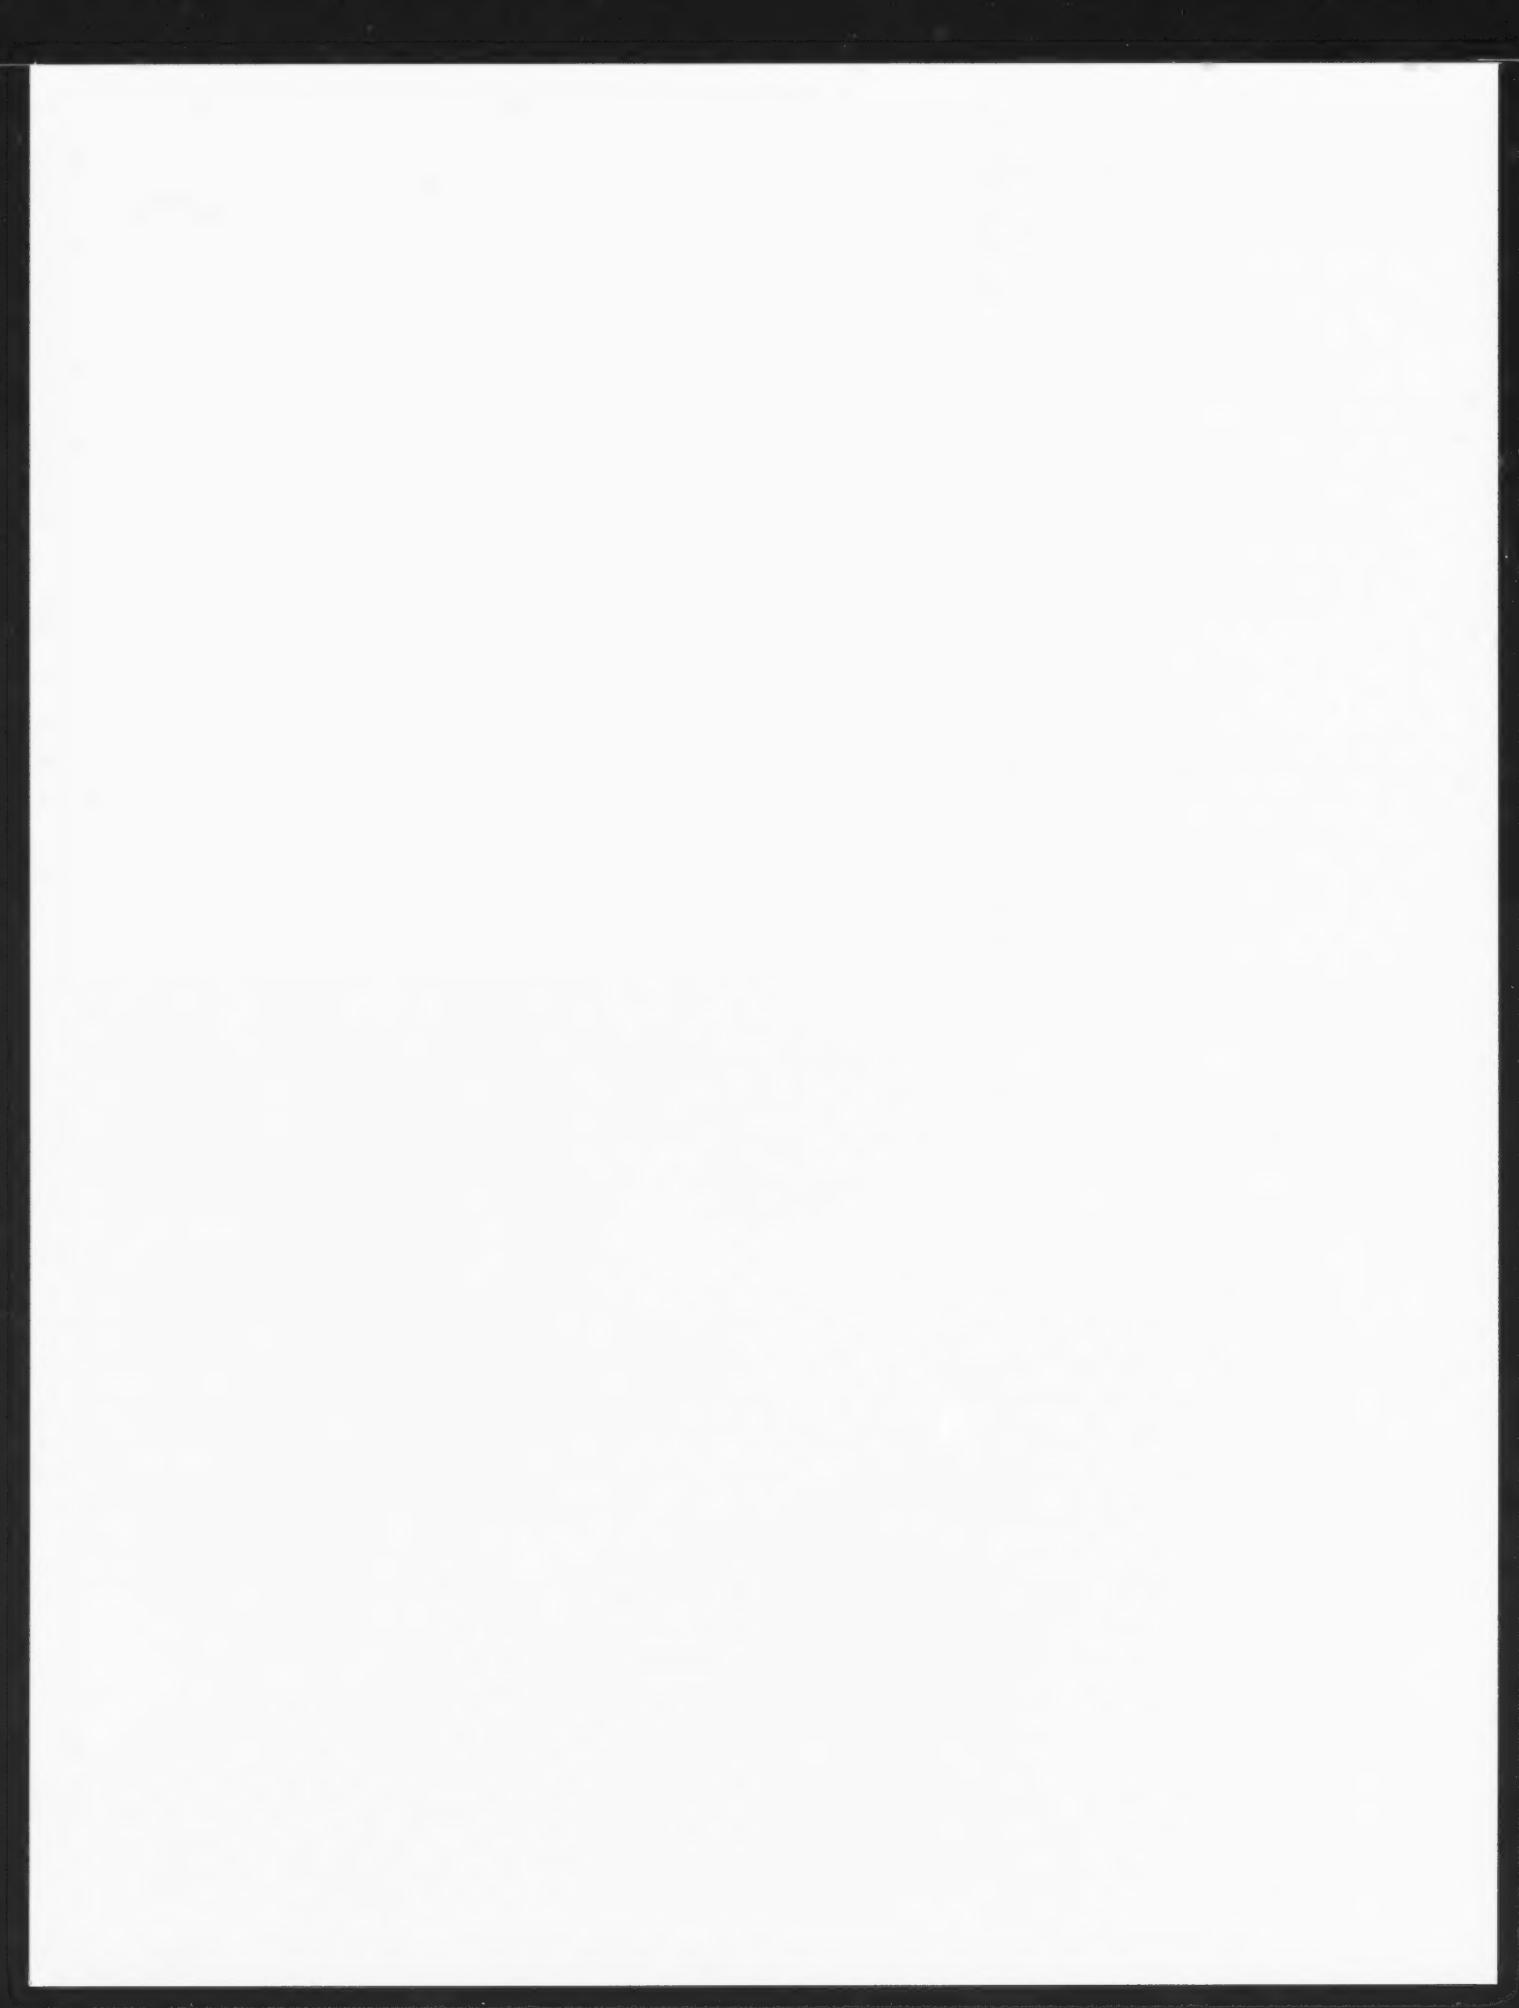

H<sub>2</sub>S decrease  
 Line split  
 Other (specify) \_\_\_\_\_

Liner Type:  Free-standing fibreglass  
 Expanded polyethylene

Free-standing polyethylene  
 Other (specify) \_\_\_\_\_

Free-standing reinforced composite

If you check a **BOLD** response, you must attach supporting information.

## 6.12 How to Complete Pipeline Licence Application Schedules

### 6.12.1 How to Complete Schedule 3: Pipeline Licence Application

Date	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
Applicant's Reference	Enter your own file reference in the designated area (optional).

#### Step 1: Identification

Applicant Name	Enter the full corporate name of the applicant assigned the BA code.
----------------	--

Applicant BA Code	Enter the four-digit BA code issued to your company by the ERCB.
-------------------	--

Application type	Choose the appropriate box. You may choose only one.
------------------	--

#### Step 2: Participant Involvement Requirements

*If you check a **BOLD** response, you must attach supporting information.*

<b>1. Personal consultation, confirmation of nonobjection, and notification requirements have been met:</b>	YES means all applicable requirements as outlined in Tables 6.1 and 6.2 and in the participant involvement requirements of Section 2, Section 6.8, and II. 82-11 have been met prior to application submission.
---	---

Public	NO means that due to exceptional circumstances, all applicable requirements as cited above have not been met. This includes being unable to contact a party or receive confirmation of nonobjection, as required.
--------	---

If NO, you must attach

- the participant involvement summary of all personal consultation and notification that has been completed;
- the name, address, telephone number, and legal land description of participants for which personal consultation and notification requirements have not been completed;
- a detailed explanation of why all personal consultation and nonobjection requirements cannot be completed;
- a detailed explanation of why all notification requirements cannot be completed; and
- an explanation of how you would like the ERCB to proceed with this application.

The ERCB will review the circumstances and decide if an exemption is warranted.

<b>Industry</b>	<p><b>YES</b> means all operators of similar pipelines/pipeline installations within your area of investigation have been notified in accordance with the participant involvement requirements of Section 2 and Section 6.8 and the proliferation requirements of Section 6.9.28 prior to application submission.</p> <p><b>NO</b> means that due to exceptional circumstances, all applicable requirements as cited above have not been met.</p> <p>If <b>NO</b>, you must attach</p> <ul style="list-style-type: none"> <li>• a record of contact with industry parties;</li> <li>• copies of correspondence between parties;</li> <li>• minutes of meetings held;</li> <li>• copies of information distributed;</li> <li>• a summary of parties for which industry notification has not occurred</li> <li>• a detailed explanation of why all industry notification requirements were not completed; and</li> <li>• an explanation of how you would like the ERCB to proceed with this application.</li> </ul> <p>The ERCB will review the circumstances and determine if an exemption is warranted.</p> <p><b>2. There are outstanding concerns/objections related to this application.</b></p> <p><b>YES</b> means members of the public and/or industry have outstanding concerns/objections.</p> <p>If <b>YES</b>, you must attach</p> <ul style="list-style-type: none"> <li>• name, address, telephone number, and legal land description of the party that has outstanding concerns/objections;</li> <li>• approximate distance from the project to the land and residence, if applicable, of the participant(s) with outstanding concerns/objections;</li> <li>• a copy of written concerns/objections received, if available;</li> <li>• a chronology of the participant involvement program conducted with the party;</li> <li>• a discussion of how you would like the ERCB to proceed with your application;</li> <li>• steps taken to mitigate the outstanding concerns/objections;</li> <li>• a copy of the project-specific information package provided; and</li> <li>• a list of other documents distributed.</li> </ul> <p>If there are residents within the EPZ, you must also attach</p> <ul style="list-style-type: none"> <li>• the assessment of existing infrastructure required under Section 8.3.2;</li> </ul>
-----------------	---

- the updated expanded project-specific information package described in Section 8.3.2; and
- a copy of an area plan described in Section 8.3.3, if it was completed.

**YES** also means that the proposed pipeline is located within the Tier 1 area of Battle Lake and that the documentation required by Section 8 is attached.

The ERCB will review the concern/objection identified and determine if an exemption is warranted.

**NO** means there are no outstanding public and/or industry objections/concerns.

**3a. Distance to nearest residence.**

Enter the distance from the edge of the pipeline right-of-way for any pipeline being applied for to the nearest residence in kilometres (km) to two decimal places. The distance to the nearest residence is required for new construction for all pipeline categories and types. For licence amendments, the distance to the nearest residence should be left blank.

If there are no residences within the EPZ, a distance to the nearest town, village, or urban centre may be used. Where there is no EPZ, a search should be done to at least 1.5 km; if there are no residences within this distance, 1.5 km may be used. For pipeline installations, this distance should not be less than the distance to the nearest surface development.

**3b. Distance to nearest surface development (pipeline installations only).**

Enter the distance from the edge of the pipeline installation lease to the nearest surface development in kilometres to two decimal places. If you are applying for a pipeline, leave this section blank.

If there is no surface development within the EPZ, a distance to the nearest town, village, or urban centre may be used. Where there is no EPZ, a search should be done to at least 1.5 km; if there is no surface development within this distance, 1.5 km may be used.

---

**Step 3: Emergency Response Planning**

---

**1. The applicant will meet ERCB requirements for emergency response planning.**

**YES** means the corporate or specific emergency response plan (ERP) will meet the requirements of *Directive 071*.

**2a. The pipeline requires a new emergency response plan.**

**YES** means a new ERP is required.

**NO** means a new ERP is not required.

**2b. The pipeline requires an amendment to an existing emergency response plan.**

**YES** means an existing ERP will be amended to include this pipeline.

**NO** means the existing ERP will not be amended.

<b>3a. Maximum calculated emergency planning zone.</b>	Enter the maximum calculated emergency planning zone radius in kilometres to two decimal places, as determined by the requirements of Directive 071.
	The maximum calculated EPZ should represent the largest EPZ of any portion of the pipeline included in the application. If there are numerous line segments included in an application, the largest EPZ of any of those segments should be indicated on Schedule 3. If there is no EPZ associated with any of the segments, enter 0.
	This question applies to new construction and to licence amendments for pipelines with an EPZ.

<b>3b. Number of surface developments in the emergency planning zone</b>	Enter the total number of surface developments located within the maximum calculated emergency planning zone.
	The number of surface developments in the EPZ should represent the surface developments for all line segments being applied for.
	This question applies to new construction and to licence amendments for pipelines with an EPZ. If there is no EPZ associated with any of the segments, enter 0. The EPZ and the number of surface developments in the EPZ should be entered as 0 for removal, abandonment/partial removal, or not constructed applications.

#### **Step 4: Type of Application**

---

*Choose the appropriate box.*

**Category Type**

**New construction**

Enter the applicable category type from Table 6.1.

Check this box if you are applying for new pipeline construction. You must also check either "New pipeline/installation licence" or "Addition to an existing Licence number."

**Unlicensed line**

Check this box if you are self-disclosing to the ERCB that you are applying for an existing unlicensed line or that you are applying to reinstate a line that was deleted in error prior to June 26, 2010. For lines deleted after June 26, 2010, submit a licence amendment application, check "Other" in Step 5, and indicate "reinstate line."

**Temporary surface pipeline  
(1 year maximum)  
(Section 6.9.11)**

Check this box if you are applying for a temporary surface pipeline in continuous use for more than 21 days.

Temporary pipelines expire after one year. At that time you must either remove the pipeline or submit a new application for a buried pipeline.

<b>In use until</b>	Enter the date the temporary surface pipeline will be shut in and removed.  This date must not be more than one year from the date of application.
<b>New pipeline/installation licence</b>	Check this box if you are applying for a new pipeline/installation licence and you have determined that there is no appropriate licence to which your pipeline/installation can be added.
<b>Addition to existing licence number</b>	Check this box if you are adding a new pipeline/installation to an existing licence.  The proposed pipeline must transport the same substance as the existing pipeline and be part of the same system.
	Enter the existing ERCB licence number.
<b>Substance change (Section 6.9.17)</b>	Check this box if you are applying to change the substance of an entire pipeline licence or specific line(s) of a pipeline licence.
<b>Original licence number</b>	Enter the licence number and the substance code of the pipeline(s) you are applying to change, or the licence you are deleting the lines from. (See Table 6.6: Substance Categories for the appropriate code.)
<b>Substance code</b>	
<b>To existing licence number</b>	Check this box if the pipeline(s) will be moved to an existing licence. Enter the licence number and substance code for the licence to which you are applying to add the lines.
<b>Substance code</b>	
<b>To new licence</b>	Check this box if the pipeline(s) will be moved onto a new licence.
<b>Entire licence</b>	Check this box if the substance of the entire licence is to be changed.
<b>Licence amendment</b>	Check this box if you are applying to change the operating parameters of an existing pipeline (e.g., H <sub>2</sub> S increase, liner installation).
<b>Licence number</b>	Enter the ERCB licence number that you are amending.

#### **Step 5: Licence Amendment Only**

---

*Complete this step only if you are amending an existing pipeline. Check all that apply to your amendment.*

*If you check a **BOLD** response, you must attach supporting information.*

<b>MOP increase (Section 6.9.15)</b>	Check this box if you are applying to increase the maximum operating pressure.
<b>MOP decrease (Section 6.9.16)</b>	Check this box if you are applying to decrease the maximum operating pressure.
<b>Resumption (Section 6.9.8)</b>	Check this box if you are applying to resume operation of a pipeline or part of a pipeline that has been discontinued or abandoned or that has not been in active flowing service within the last 12 months.

<b>Discontinuation</b> (Section 6.9.5)	Check this box if you are advising the ERCB that operation of an existing pipeline has been discontinued.
<b>Abandonment</b> (Section 6.9.6)	Check this box if you are advising the ERCB that an existing pipeline has been abandoned.
<b>Removal</b> (Section 6.9.9)	Check this box if you are applying to remove an entire pipeline, including crossings of roads, railways, and water courses.
<b>Not constructed</b>	Check this box if you are advising the ERCB that the pipeline will not be constructed.
<b>Flow reversal</b>	Check this box if you are applying to reverse the flow of the pipeline.
<b>H<sub>2</sub>S increase</b>	Check this box if you are applying to increase the H <sub>2</sub> S content of a pipeline licence.
<b>H<sub>2</sub>S decrease</b>	Check this box if you are applying to decrease the H <sub>2</sub> S content of a pipeline licence.
<b>Line split</b> (Section 6.9.13)	Check this box if you are applying to split a line segment into multiple line segments.
<b>Other (specify)</b>	Check this box for all licence amendments other than those listed. Specify the type of amendment in the space provided.
<b>Liner installation</b>	Check this box if you are applying to install a liner in an existing pipeline.
<b>Liner type</b> (Section 6.9.19)	<p>If you are installing a liner, choose the box that describes the type of liner.</p> <p>If you select <b>Other (specify)</b>, you must specify the type of liner, submit a product specification sheet for the grade of liner material to be installed, and attach a detailed explanation.</p> <p>The ERCB will review the circumstances and decide if an exemption is warranted.</p>

## **Directive 056 – Schedule 3.1**

### **Segment/Installation Identification**

DAY      MONTH      YEAR

**ERCB APPLICATION NUMBER**

**APPLICANT'S REFERENCE**

## 1. IDENTIFICATION

Company Name \_\_\_\_\_

Applicant BA Code \_\_\_\_\_

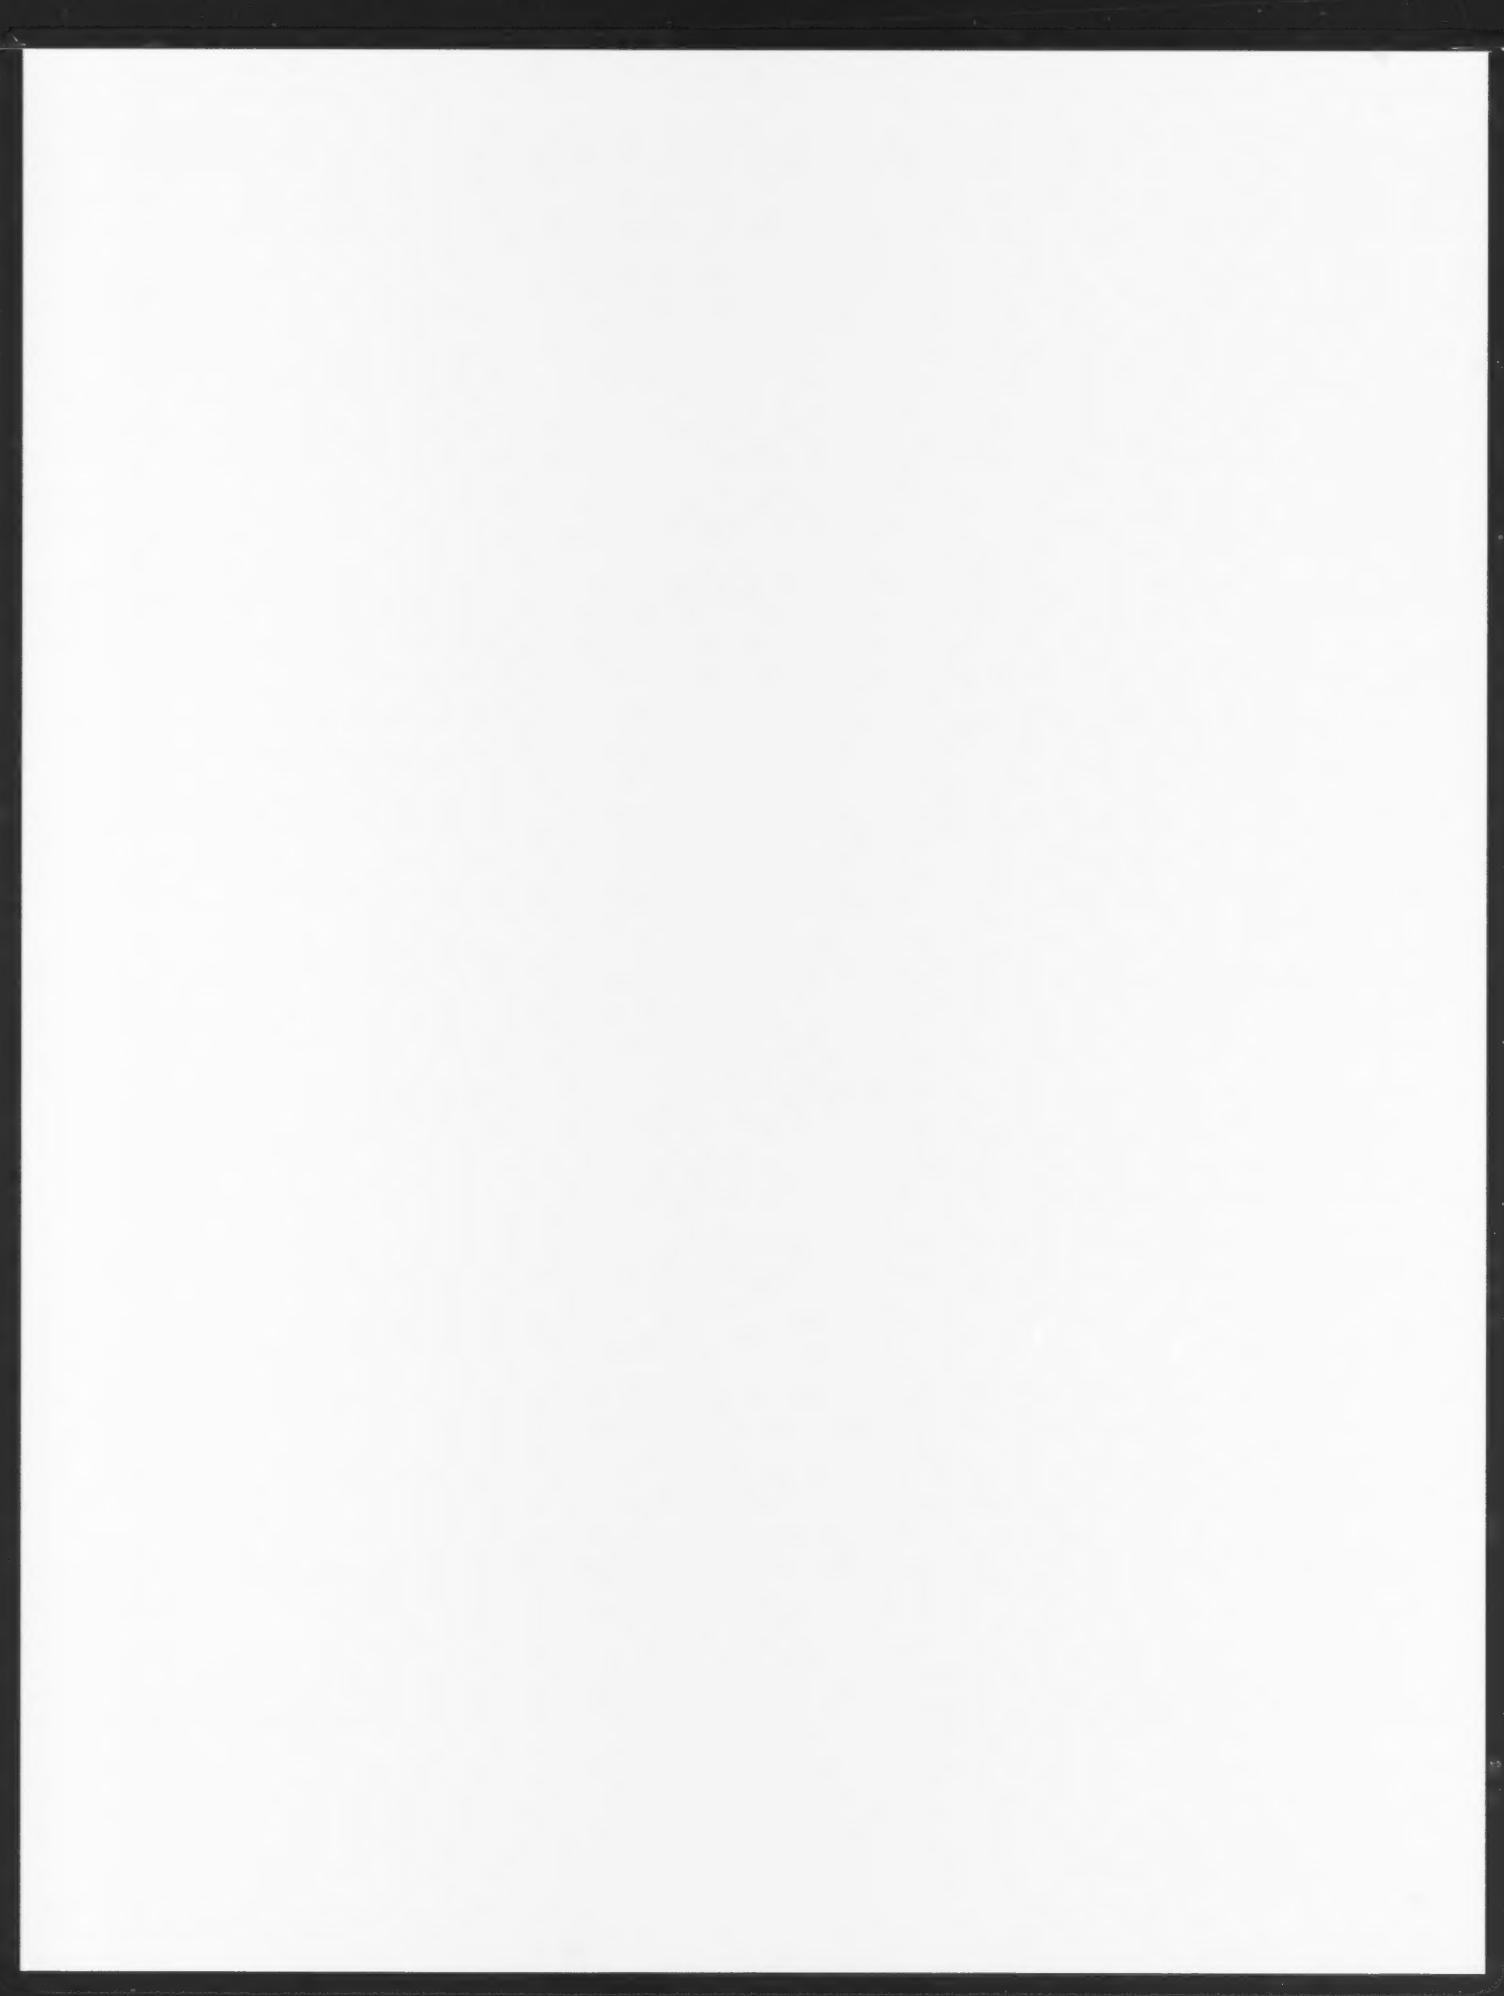

## 2. SUBSTANCE DETAIL

Substance \_\_\_\_\_ Code \_\_\_\_\_ H<sub>2</sub>S (mol/krnol) \_\_\_\_\_ (Effective) Partial Pressure (kPa) \_\_\_\_\_ Licence Number P \_\_\_\_\_

### **3. PIPE SPECIFICATION**

#### **4. PIPE LOCATION AND STATUS**

## 5. INSTALLATION SPECIFICATION

### **6.12.2 How to Complete Schedule 3.1: Segment/Installation Identification**

**Date** Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).

**Applicant's Reference** Enter your own file reference in the designated area (optional).

---

#### **Step 1: Identification**

**Company Name** Enter the full corporate name of the applicant assigned the BA code.

**Applicant BA Code** Enter the four-digit BA code issued to your company by the ERCB.

---

#### **Step 2: Substance Detail**

**Substance** Enter the category name of the substance from Table 6.6. (Tables 6.6 to 6.19 are at end of this section.)

**Code** Enter the substance code from Table 6.6.

**H<sub>2</sub>S** Enter the maximum H<sub>2</sub>S content in moles per kilomole (mol/kmol) under the pipeline-licensed MOP conditions for pipelines containing gas and at bubble point pressure for pipelines containing liquids. Enter zero if no H<sub>2</sub>S is present.

**(Effective) Partial Pressure** Enter the maximum partial pressure or effective partial pressure in kilo pascals (kPa) to one decimal place. Enter zero if no H<sub>2</sub>S is present.

**Licence Number** Enter the licence number of the pipeline or pipeline installation.

---

#### **Step 3: Pipe Specification**

**Outside Diameter** Enter the outside diameter of the pipeline in millimetres (mm) to one decimal place.

**Wall Thickness** Enter the pipe nominal wall thickness in mm to two decimal places.

**Material** Enter the code for the pipe material from Table 6.7.

**Type and Grade** Enter the codes for the type and grade of material for the pipeline from Tables 6.8, 6.9, 6.10, and 6.11.

**Maximum Operating Pressure (MOP)** Enter the MOP of the pipeline rounded to the nearest 10 kilopascals (kPa).

**Stress Level  
(Section 6.9.25)** Enter the calculated stress level of the pipeline.

**Joints** Enter the code for the type of joint from Table 6.12.

**Internal Protection (IP)** Enter the internal protection code from Table 6.13.

For a free-standing liner (L), record the outside diameter, wall thickness, material, type, grade, and joint code of the existing pipe. Record the MOP of the proposed liner and leave the stress level blank.

#### **Step 4: Pipe Location and Status**

---

<b>Action</b>	Enter the applicable code:  A—when adding a new line number to a new or existing licence  C—when making changes to an existing pipeline(s) where pipe specification(s), line location(s) and/or status(es) is/are changing  M—when moving a line to a new or existing licence (substance change)
<b>Line Number</b>	Enter the line number of the pipeline. If you are adding pipelines to an existing licence, use the next available line number on the licence.  For substance change applications: Enter the line number of the pipeline as it is currently licensed.
<b>From Location</b>	Enter the legal description of the starting point of the pipeline according to the direction of flow.
<b>Facility Code (FC)</b>	Enter the facility code for the starting point of the pipeline from Table 6.14.
<b>To Location</b>	Enter the legal description of the terminating point of the pipeline.
<b>Facility Code (FC)</b>	Enter the facility code for the end point of the pipeline from Table 6.14.
<b>Length</b>	Enter the length of the pipeline in kilometres (km) to two decimal places.
<b>Status</b>	Enter the appropriate status code from Table 6.15.
<b>Environment (ENV)</b>	Enter the environment code from Table 6.16, if applicable.  A creek, lake, or river designation code must be entered if it appears on the current Provincial Base Map 1:1 000 000.  The <i>Code of Practice</i> applies to both mapped and unmapped water bodies.  Due to the large scale of the maps, there are many water bodies that are not shown on the maps. The <i>Code of Practice</i> outlines how the class of an unmapped water body is determined.
<b>Release Volume</b>	Enter the proposed or existing total H <sub>2</sub> S release volume in cubic metres (m <sup>3</sup> ) for all permitted, operating, or discontinued category D pipeline segments and category C oil effluent pipeline segments with greater than 10 mol/kmol H <sub>2</sub> S.
<b>ID NO.</b>	This is used as a cross-reference for Step 3: Pipe Specification.

### **Step 5: Installation Specification**

Action	Enter the applicable code:  A—when adding a new installation to a new or existing licence  C—when making changes to an existing installation where specifications are changing
Installation Number (Inst. No.)	Enter the pipeline installation number. If you are adding a pipeline installation to an existing pipeline licence, use the next available installation number on the licence.
Location	Enter the legal description of the pipeline installation location.
Installation Type (Inst. Type)	Enter the type of installation from Table 6.17.
Compressor/Pump Rating (kW)	If you are constructing a compressor or pump station, enter the kilowatt (kW) rating.
Driver Power Source	Enter the compressor/pump driver power source from Table 6.18.
Status	Enter the appropriate status code from Table 6.19.

**Table 6.6. Substance categories**

Substance	Substance category	Code	Priority code
Natural gas with >10 mol/kmol of H <sub>2</sub> S content	Sour natural gas	SG	1
Butane, ethylene, propane, pentanes, liquid ethane	HVP products	HV	2
Condensate, diesel fuel, gasoline, heating oil, hydrocarbon diluents, kerosene, solvents	LVP products	LV	3
Blended crude bitumen, crude oil, synthetic crude oil	Crude oil	CO	4
Multiphase fluids	Oil well effluent	OE	5
Methane, natural gas with ≤ 10 mol/kmol of H <sub>2</sub> S content	Natural gas	NG	6
Fuel gas	Fuel gas	FG	7
Produced water	Salt water	SW	8
Ammonia, caustic, glycol, methanol, polymer, sulphur, carbon dioxide	Miscellaneous liquids	ML	9
Air, ammonia, carbon dioxide, ethane, helium, hydrogen, nitrogen, steam	Miscellaneous gases	MG	10
Potable water, surface water	Fresh water	FW	11

ERCB APPLICATION NUMBER		
-------------------------	--	--

APPLICANT'S REFERENCE

### 1. IDENTIFICATION

Company Name \_\_\_\_\_

Applicant BA Code \_\_\_\_\_

### 2. TECHNICAL CONSIDERATIONS

1. The H<sub>2</sub>S content is \_\_\_\_\_ mol/kmol.
2. The partial pressure or effective partial pressure of the H<sub>2</sub>S is \_\_\_\_\_ kPa.
3. The pipeline meets all current applicable CSA Z662 standards ..... YES  NO
4. Prior to operation, procedures for corrosion mitigation, monitoring, evaluation, and record keeping will be implemented ..... YES  NO  N/A
5. The liquid hydrocarbon pipeline meets current leak detection requirements ..... YES  NO  N/A
6. The design of the steam distribution line is registered with ABSA ..... YES  NO  N/A
7. Production streams with different H<sub>2</sub>S contents will be blended ..... YES  NO
8. The pipeline installation meets all applicable standards ..... YES  NO

### 3. NATURAL GAS/OIL EFFLUENT PIPELINES > 10 mol/kmol H<sub>2</sub>S

1. H<sub>2</sub>S release volume Proposed/Existing \_\_\_\_\_ m<sup>3</sup> Level designation:  Level 1  Level 2  Level 3  Level 4
2. This application will change the level designation of this pipeline or a connecting pipeline ..... YES  NO
3. The setback requirements have been met ..... YES  NO
4. The pipeline will inject natural gas containing H<sub>2</sub>S into a producing reservoir ..... YES  NO

### 4. SUBSTANCE CHANGE, H<sub>2</sub>S INCREASE, MOP INCREASE, AND LINER INSTALLATION ONLY

1. The presence of H<sub>2</sub>S, an increase in MOP, or a change in substance will reclassify the pipeline to Category C or D ..... YES  NO  N/A
2. The liner is being installed due to  Internal corrosion  External corrosion  Other (specify) \_\_\_\_\_

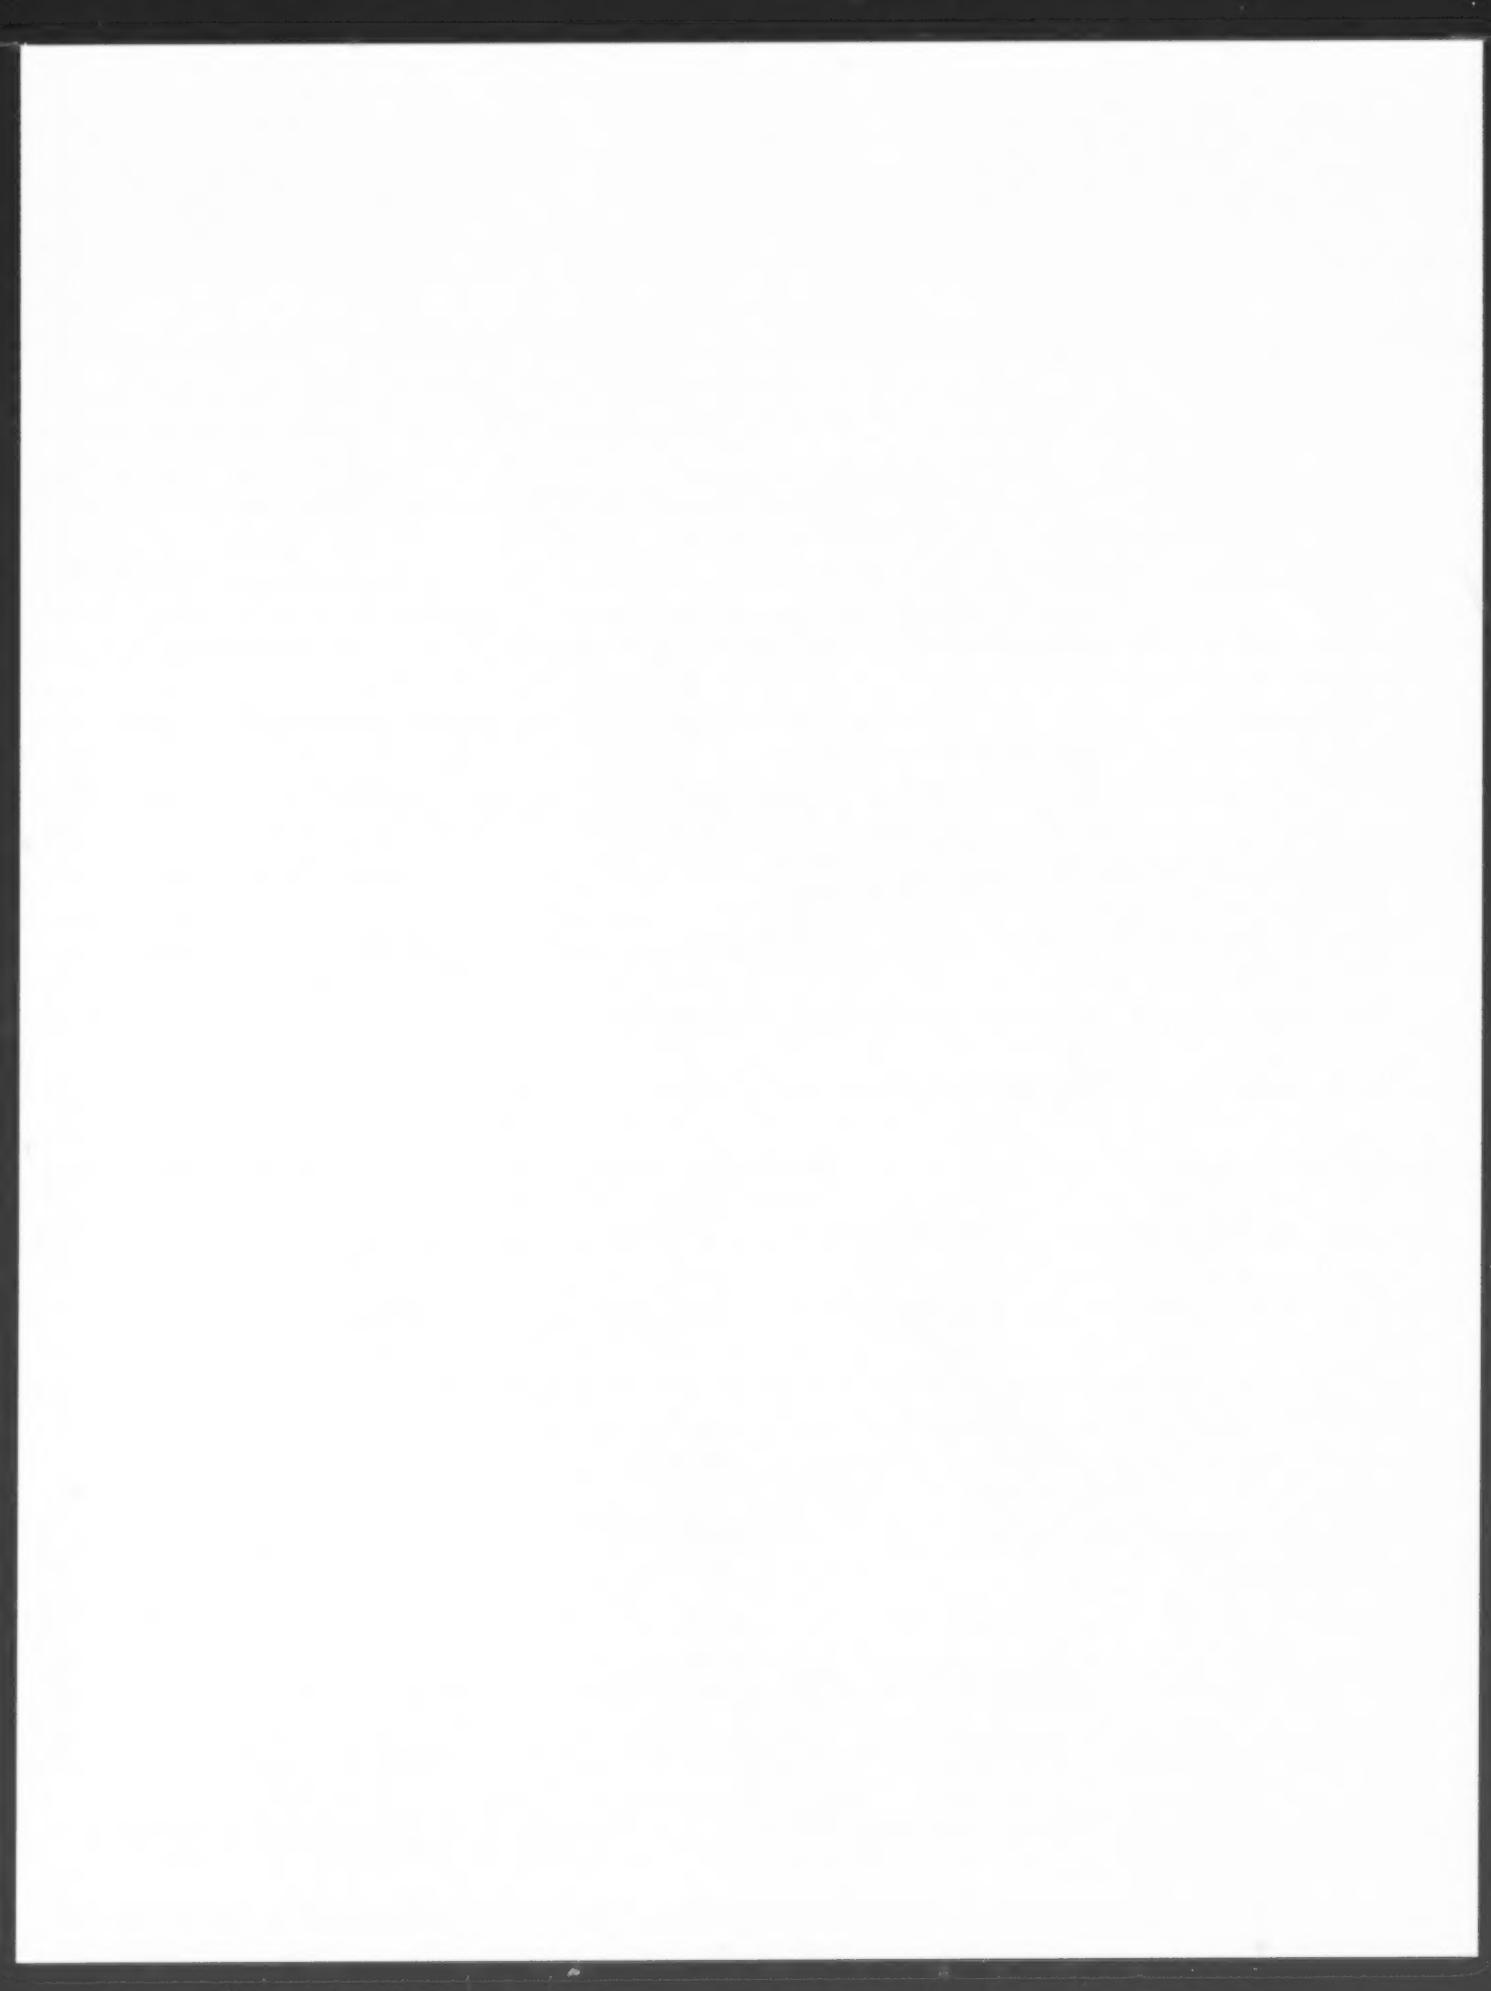

### 5. RESUMPTION, DISCONTINUATION, AND ABANDONMENT ONLY

- 1a. The pipeline you are applying to resume operation of was discontinued in accordance with ERCB requirements ..... YES  NO
- 1b. The integrity of the discontinued pipeline has been verified ..... YES  NO
2. The pipeline was discontinued in accordance with ERCB requirements ..... YES  NO
3. The pipeline was abandoned in accordance with ERCB requirements ..... YES  NO
4. In case of abandonment, all associated surface facilities will be removed and the surface site reclaimed within one (1) year ..... YES  NO

### 6. ENVIRONMENTAL REQUIREMENTS

1. The pipeline will be constructed in accordance with AENV's *Environmental Protection Guidelines* ..... YES
2. The applicant will comply with the *Code of Practice* in accordance with the Water Act ..... YES  N/A
3. Application has been made to AENV for Conservation and Reclamation Approval (white area only) ..... YES  NO  N/A
- If application has been advertised, provide the Notice Expiry Date \_\_\_\_\_ (DAY-MONTH-YEAR)
4. The proposed pipeline/pipeline installation is located within the Calgary or Edmonton Transportation/Utility Corridor ..... YES  NO
- 4a. If YES, the pipeline/pipeline installation has ministerial consent from Alberta Infrastructure ..... YES  NO
5. The proposed pipeline/pipeline installation meets ERCB environmental requirements ..... YES  NO

If you check a **BOLD** response, you must attach supporting information.

### 6.12.3 How to Complete Schedule 3.2: Technical/Environmental Information

**Date** Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).

**Applicant's Reference** Enter your own file reference in the designated area (optional).

#### **Step 1: Identification**

**Company Name** Enter the full corporate name of the applicant assigned the BA code.

**Applicant BA Code** Enter the four-digit BA code issued to your company by the ERCB.

#### **Step 2: Technical Considerations**

*If you check a **BOLD** response, you must attach supporting information.*

**1. H<sub>2</sub>S content.** Enter the maximum H<sub>2</sub>S content (mol/kmol) to two decimal places under the pipeline-licensed MOP conditions for pipelines containing gas and at bubble point pressure for pipelines containing liquids. Enter zero if no H<sub>2</sub>S is present. This value must match the H<sub>2</sub>S content value entered on Schedule 3.1.

**2. Partial pressure or effective partial pressure of the H<sub>2</sub>S. (Section 6.9.20)** Enter the partial pressure (kPa) or effective partial pressure to one decimal place. Enter zero if no H<sub>2</sub>S is present. This value must match the partial pressure value entered on Schedule 3.1. Partial pressure or effective partial pressure is used in CSA Z662 to determine the need for sour service.

**3. The pipeline meets all current applicable CSA Z662 standards. (Sections 6.9.21, 6.9.22, 6.9.23, and 6.9.24)** YES means that the pipelines in this application are covered by the current CSA Z662 standards and meet all applicable requirements.

YES also means that for existing multiphase pipelines with a partial pressure between 0.3 and 70 kPa only, and where the amendment does not increase the partial pressure above 70 kPa, the pipeline meets the CSA Z662 standard.

**NO** means that one of the following applies:

- due to exceptional circumstances, all applicable requirements have not been met;
- CSA Z662 standards do not apply for the category type of the pipeline;
- the application is for a Category C or D surface pipeline for purposes other than well testing;
- the application is for a Category C surface pipeline associated with a thermal in situ oil sands operation; or
- the application is for a CO<sub>2</sub> pipeline.

If NO you must attach

- a detailed explanation of what CSA Z662 standards are not being met and why or an explanation of why CSA Z662 standards do not apply;
- a detailed technical assessment that demonstrates how design, construction, and operational considerations have addressed public safety and environmental concerns; and
- all applicable audit documentation (see Section 6.10.7.3 and Table 6.4).

If NO, for a Category C surface pipeline (unless associated with a thermal in situ oil sands operation; see below) or a Category D surface pipeline, you must attach

- a detailed technical assessment that demonstrates how design, construction, and operational considerations described in Section 21 of the *Pipeline Regulation* will be met;
- a detailed explanation of the pipeline design, including consideration of the effects on downstream pipelines and compatibility with connecting pipelines;
- a description of the measures taken to protect the surface pipeline from third-party damage;
- information on the corrosion control, monitoring program, and mitigation measures for the proposed surface pipeline, including an assessment of any impacts that adding and later removing the flow might have on the flow regimen of the connecting pipelines; and
- an explanation detailing the need for the surface pipeline.

If NO, for a Category C surface pipeline associated with a thermal in situ oil sands operation, you must submit a letter confirming that the proposed pipeline

- will be a permanent surface pipeline;
- will be part of a thermal in situ operation (e.g., SAGD or cyclic steam injection) for the purpose of crude bitumen production in a designated oil sands area;
- will be made of steel;
- will be licensed as oil effluent; and
- will have an H<sub>2</sub>S partial pressure greater than 0.3 kPa but less than or equal to 70.0 kPa.

If any of these items cannot be confirmed, you must submit the support documentation outlined above for a Category C or D surface pipeline.

If NO, for a CO<sub>2</sub> pipeline, you must set out in an attachment

- the specific operating pressure ranges and pressure drops to avoid unnecessary phase change;

- corrosion mitigation and monitoring issues due to water content and other impurities;
- specific material considerations to minimize risk of fracture propagation;
- ERP and dispersion modelling considerations; and
- safety precautions to be taken during pipeline operation and repair.

The ERCB will review the circumstances for the current applicable CSA Z662 standards not being met and decide if an exemption is warranted.

**4. Prior to operation, procedures for corrosion mitigation, monitoring, evaluation, and record keeping will be implemented.**

YES means you have established and will be implementing suitable internal and external corrosion mitigation, monitoring, evaluation, and record-keeping procedures in accordance with the requirements of the current CSA Z662 standard, Section 9, and the *Pipeline Regulation*, Section 53.

NO means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If NO, you must attach

- a detailed explanation of why a corrosion program is not being implemented;
- a detailed technical assessment that demonstrates why the requirements of the current CSA Z662 standard and the *Pipeline Regulation* are not being met; and
- all applicable audit documentation (see Section 6.11.2.4).

The ERCB will review the circumstances and decide if an exemption is warranted.

N/A means that the corrosion control procedures required by the current CSA Z662 standard and the *Pipeline Regulation* do not apply because pipeline is noncorrosive (e.g., fibreglass, composite, or polymer pipe).

**5. The liquid hydrocarbon pipeline meets current leak detection requirements.**  
(Section 6.9.3)

YES means the pipeline has been designed and will be operated to meet the current requirements outlined in CSA Z662, Annex E.

NO means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If NO, you must attach a detailed explanation of why the leak detection requirements will not be met.

The ERCB will review the circumstances and decide if an exemption is warranted.

N/A means the proposed pipeline is not transporting the applicable liquid hydrocarbon products.

**6. The design of the steam distribution line is registered with ABSA.**  
 (Section 6.9.4)

YES means the design of the steam distribution line satisfies the requirements of CSA Z662, Clause 14 and the design is registered with ABSA in accordance with the *Pressure Equipment Safety Regulation*, Section 16(1).

NO means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If NO, you must attach a detailed explanation of why the design requirements will not be met. The ERCB will review the circumstances and decide if an exemption is warranted.

N/A means the proposed pipeline is not a steam distribution line.

**7. Production streams with different H<sub>2</sub>S contents will be blended.**  
 (Section 6.9.27)

YES means that you intend to combine production streams for the purpose of maintaining a lower H<sub>2</sub>S content in the final blended stream so that it may be transported within the licensed service conditions of the receiving pipeline.

If YES, you must attach a detailed description of two independent techniques, as described in Section 6.9.27, to ensure that the licensed H<sub>2</sub>S content in the receiving pipeline is not exceeded. This must include

- a detailed description of the design for flow ratio control with or without automatic shutdown; and
- a detailed description of H<sub>2</sub>S monitoring (or flow ratio control) with automatic shutdown.

The ERCB will review the circumstances and decide if the measures are appropriate.

NO means that you are not blending product streams.

**8. The pipeline installation meets all applicable standards.**  
 (Section 6.9.26)

YES means the pipeline installation will meet all applicable requirements in accordance with Section 6.9.26.

NO means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If NO, you must attach

- a detailed explanation of what requirements are not being met and why;
- a detailed technical assessment that demonstrates how design, construction, and operational considerations have addressed public safety and environmental concerns; and
- all applicable audit documentation (see Section 6.11.2.8 and Table 6.4).

The ERCB will review the circumstances and decide if an exemption is warranted.

Do not answer this question if you are applying for a pipeline.

**Step 3: Natural Gas/Oil Effluent Pipelines > 10 mol/kmol H<sub>2</sub>S**

---

Complete this step only if natural gas or oil effluent containing > 10 mol/kmol of H<sub>2</sub>S is being transported.

If you check a **BOLD** response, you must attach supporting information.

**1. H<sub>2</sub>S release volume—proposed or existing**

Enter the proposed or existing total H<sub>2</sub>S release volume for all category D pipeline segments and for all category C oil effluent pipeline segments greater than 10 mol/kmol H<sub>2</sub>S that you are constructing or amending.

If there is more than one segment, identify the highest H<sub>2</sub>S release volume for a segment as entered in Schedule 3.1.

If your application involves the blending of substances, you may apply for an H<sub>2</sub>S level that reflects the blended composition of the various streams that contribute to the natural gas transported in the pipeline segment.

**Level designation**

Check the level designation for the proposed or existing pipeline as stated in Table 6.3. If there is more than one segment, identify the level designation for the highest H<sub>2</sub>S release volume.

**2. This application will change the level designation of this pipeline or a connecting pipeline.**

YES means the level of the existing pipeline or any connecting pipeline will change and the blending of the various streams contributing to the natural gas transported in the pipeline segment was not considered.

If YES, you must attach

- representative tie-in schematics of ESD valves;
- a map showing the levels for the pipeline system and indicating the pipeline segments that are being revised, including those for which the level was determined by considering the blending of the various streams that contribute to the natural gas transported in the pipeline segment—the map should include all residences and other developments within the notification distances;
- the input parameters used to calculate the potential release volumes of all affected segments;
- documentation that confirms that all personal consultation and notification requirements have been met for all affected pipeline segments and that a revised ERP, if required, has been submitted; and
- a system map showing ESD and check valve locations.

The ERCB will review the circumstances and decide if an exemption is warranted.

NO means the existing H<sub>2</sub>S level will not change.

**3. The setback requirements have been met.**

YES means setback requirements have been met, as outlined in Table 6.3.

**NO** means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If **NO**, you must attach

- a detailed explanation of why the setback requirements have not been met; and
- a map showing all residences and other developments within the notification distances and indicating where setbacks have not been met.

The ERCB will review the circumstances and decide if an exemption is warranted.

**4. The pipeline will inject natural gas containing H<sub>2</sub>S into a producing reservoir.**  
(Section 6.9.24)

**YES** means this pipeline will be used to inject natural gas containing > 10 mol/kmol H<sub>2</sub>S into a producing oil and/or gas reservoir.

If **YES**, you must submit

- a detailed explanation of the effect that the reservoir fluid composition might have on injection or producing wells and producing pipelines;
- a detailed plan including steps that need to be taken to reclassify existing wells and pipelines; and
- evidence that the potential for gas cap breakthrough has been evaluated.

The ERCB will review the circumstances and decide if the measures are appropriate.

**NO** means that this is not an injection pipeline or that it is not injecting into a producing reservoir.

**Step 4: Substance Change, H<sub>2</sub>S Increase, MOP Increase, and Liner Installation Only**

*Complete this step only if you are applying for any of these types of pipeline licence amendments.*

*If you check a **BOLD** response, you must attach supporting information.*

**1. The presence of H<sub>2</sub>S, an increase in MOP, or a change in substance will reclassify the pipeline to Category C or D.**  
(Sections 6.9.15, 6.9.16, and 6.9.17)

**YES** means that one of the following applies:

- the introduction or increase of H<sub>2</sub>S or the increase in MOP causes an H<sub>2</sub>S partial pressure increase, changing the pipeline category from B to C or D; if this is the case, the pipeline and associated steel materials must meet sour service materials specifications;
- the pipeline is currently Category C and will be reclassified to Category D (natural gas with H<sub>2</sub>S only) because of the increase in either H<sub>2</sub>S or MOP or both; or
- a change in substance to HVP.

If **YES** because of the increase in H<sub>2</sub>S or MOP and changing from Category B to C or D, you must attach

- details of any required material testing or documentation confirming material and component suitability for sour service;

- evidence that weld procedures are suitable for service conditions;
- evidence that weld testing requirements have been satisfied;
- evidence that hydrostatic testing requirements have been satisfied;
- a detailed explanation of the compatibility with connecting pipelines; and
- an engineering assessment demonstrating compliance with the sour service requirements of the current edition of CSA Z662. Refer to the document, *Reference Tool for Sour Service Conversion of Existing Carbon Steel Pipelines*, found on the Directive 056 Web page.

If YES because of the increase in H<sub>2</sub>S or MOP and changing from Category C to D (natural gas with H<sub>2</sub>S only), you must attach

- an engineering assessment that follows the additional criteria for sour service conversions involving gas with greater than 10 moles of H<sub>2</sub>S gas per kilomole of natural gas and that demonstrates pipeline integrity, as described in the *Reference Tool for Sour Service Conversion of Existing Carbon Steel Pipelines* found on the Directive 056 Web page.
- evidence demonstrating that hydrostatic testing requirements have been satisfied; and
- a detailed explanation of the compatibility with connecting pipelines.

If YES because of a change in substance to HVP, you must attach an engineering assessment that provides evidence of

- conformance with the requirements for HVP pipeline design, operation, and change of service as contained in CSA Z662 and the *Pipeline Act and Regulation*, and
- pipeline integrity verification.

The ERCB will review the circumstances and decide if the measures are appropriate.

NO means the increase in the H<sub>2</sub>S and/or MOP will not cause reclassification of the pipeline to Category C or D and the substance will not change to HVP.

N/A means H<sub>2</sub>S is not a component of the product transported.

**2. The liner is being installed because of internal corrosion, external corrosion, or other. (Section 6.9.19)**

*Check the appropriate box.*

If the application is for a liner replacement, check the purpose of the original liner installation.

For Other, specify the reason by attaching a detailed explanation and the liner specifications and pressure test charts.

The ERCB will review the circumstances and decide if an exemption is warranted.

## **Step 5: Resumption, Discontinuation, and Abandonment Only**

---

*Complete this step only if you are applying to resume operation of a pipeline or advising the ERCB of discontinuation or abandonment of operations that have been completed.*

*If you check a **BOLD** response, you must attach supporting information.*

**1a. The pipeline you are applying to resume operation of was discontinued in accordance with ERCB requirements.**  
(Section 6.9.8)

**YES** means the pipeline was discontinued in accordance with the requirements of the *Pipeline Regulation*.

**NO** means that the pipeline was abandoned or that because of exceptional circumstances, all applicable requirements as cited above has not been met.

If **NO**, you must attach

- detailed information confirming the pipeline's integrity (internal and external);
- a comprehensive engineering assessment that supports the resumption; and
- documentation as specified in the *Pipeline Applications—Checklist for Minimum Technical Requirements* (Section 6.7.1).

If the pipeline is abandoned, you must attach documentation demonstrating that personal consultation, confirmation of nonobjection, and notification requirements have been met for all parties along the entire right-of-way and for those affected by the setbacks.

The ERCB will review the circumstances and decide if an exemption is warranted.

Abandoned pipelines are not normally candidates for resumption-of-operation licensing. A licence may be granted, but only in rare and exceptional circumstances if the applicant has supported the request with a comprehensive engineering assessment.

Do not answer this question if you are not applying to resume a pipeline.

**1b. The integrity of the discontinued pipeline has been verified.**

**YES** means you have verified the integrity of the discontinued pipeline.

**NO** means that because of exceptional circumstances, you have not undertaken all necessary work to verify the integrity of the discontinued pipeline.

If **NO**, you must attach

- an explanation of why the necessary work to verify the integrity of the pipeline has not been undertaken; and
- documentation as specified in the *Pipeline Applications—Checklist for Minimum Technical Requirements* (Section 6.7.1).

The ERCB will review the circumstances and decide if an exemption is warranted.

Do not answer this question if you are not applying to resume a pipeline.

**2. The pipeline was discontinued in accordance with ERCB requirements.**  
(Section 6.9.5)

YES means the pipeline was discontinued in accordance with the requirements of the *Pipeline Regulation*.

**NO** means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If **NO**, you must attach an explanation of why the pipeline was not discontinued in accordance with the applicable ERCB requirements.

The ERCB will review the circumstances and decide if an exemption is warranted.

Do not answer this question if you are not applying to discontinue a pipeline.

**3. The pipeline was abandoned in accordance with ERCB requirements.**  
(Section 6.9.6)

YES means the pipeline was abandoned in accordance with the requirements of the *Pipeline Regulation*, including the removal of all surface equipment related to the pipeline that will no longer be in use.

**NO** means that because of exceptional circumstances, all applicable requirements as cited above have not been met.

If **NO**, you must attach an explanation of why the pipeline was not abandoned in accordance with the applicable ERCB requirements.

The ERCB will review the circumstances and decide if an exemption is warranted.

Do not answer this question if you are not applying to abandon a pipeline.

**4. In case of abandonment, all associated surface facilities will be removed and the surface site reclaimed within one year.**

YES means all facilities that will no longer be in service associated with the abandoned pipeline will be removed and the surface site reclaimed within one year.

NO means the associated facilities will not be removed and the site will not be reclaimed because of exceptional circumstances or because the facility is still in use.

Do not answer this question if you are not applying to abandon a pipeline.

## **Step 6: Environmental Requirements**

---

*If you check a **BOLD** response, you must attach supporting information.*

**1. The pipeline will be constructed in accordance with AENV's *Environmental Protection Guidelines*.**

YES means all requirements of the *Environmental Protection Guidelines* issued by AENV have been met.  
Do not answer this question if no new construction is taking place.

**2. The applicant will comply with the *Code of Practice* in accordance with the *Water Act*.**

YES means you will notify AENV as required by the *Water Act*.  
The *Code of Practice* applies to both mapped and unmapped water bodies. Because of the large scale of the maps, there are many water bodies that are not shown on the maps. The *Code of Practice* outlines how the class of an unmapped water body is determined.  
N/A means there is no water crossing involved.

**3. Application has been made to AENV for conservation and reclamation approval (white area only).  
(Section 6.9.30)**

YES means you have determined that Conservation and Reclamation (C&R) Approval is required under the AENV *Environmental Protection and Enhancement Act (EPEA)*, and you have applied to AENV (white area only).  
If the application has been advertised, enter the notice expiry date. Routine applications submitted before this expiry date will be closed.  
**NO** means you have determined that a C&R approval is required but you have not applied for it.  
If **NO**, you must attach a detailed explanation of why the required C&R approval has not been applied for. The ERCB will review the circumstances but will not approve the application until C&R approval is granted.  
N/A means the proposed pipelines are AENV Class II and a C&R Approval is not required.

**4. The proposed pipeline/installation is located within the Calgary or Edmonton Transportation/Utility Corridor.  
(Section 6.9.12)**

YES means the proposed pipeline/pipeline installation is located within the Calgary or Edmonton Transportation/Utility Corridor.  
NO means the proposed pipeline/pipeline installation is not located within the Calgary or Edmonton Transportation/Utility Corridor.

**4a. If YES, the pipeline/installation has ministerial consent from Alberta Infrastructure.**

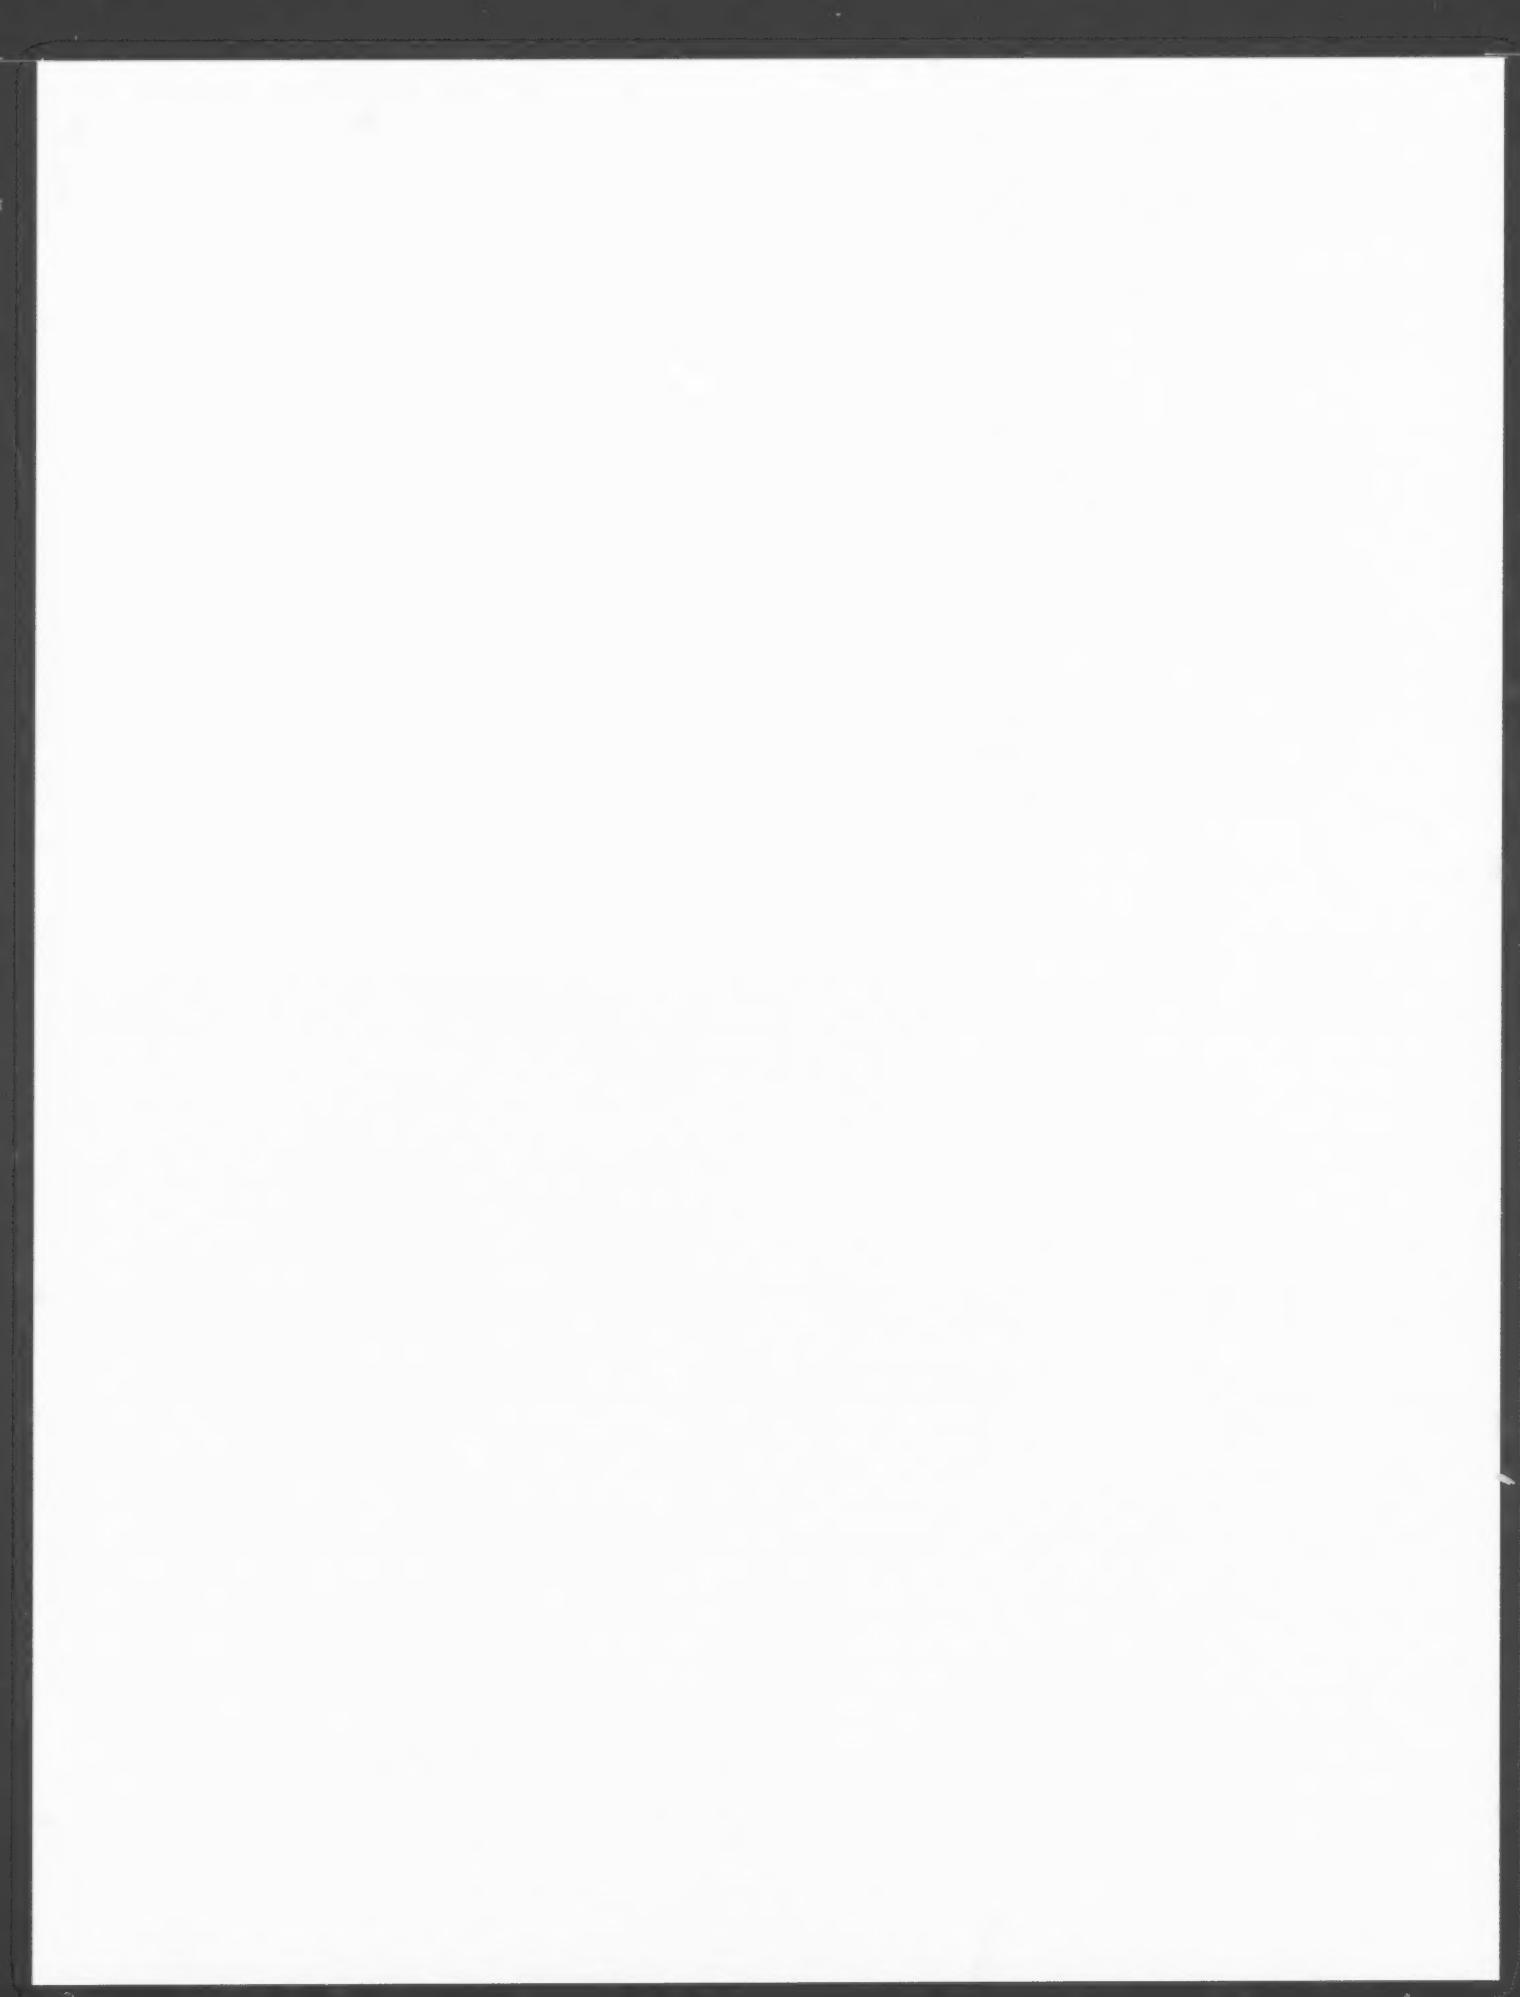

YES means the pipeline/pipeline installation has received ministerial consent from Alberta Infrastructure.  
**NO** means the pipeline/pipeline installation has not received ministerial consent from Alberta Infrastructure.  
If **NO**, you must attach a detailed explanation of why ministerial consent has not been received. The ERCB will review the circumstances and decide if an exemption is warranted.

**5. The proposed pipeline/pipeline installation meets ERCB environmental requirements**

**YES** means the proposed pipeline/pipeline installation meets all applicable ERCB environmental requirements.

**NO** means the pipeline/pipeline installation does not meet all applicable ERCB environmental requirements.

If **NO**, you must attach a detailed explanation of why the pipeline/pipeline installation does not meet ERCB environmental requirements and what measures will be in place to ensure that the facility will not have a negative impact on the environment.

## **Section 7 Well Licence Applications (Schedule 4)**

### **7.1 Overview**

An applicant must use Schedule 4 to apply for a well licence for

- a new oil, gas, or crude bitumen well,
- a water well greater than 150 m,
- a new disposal or injection well,
- re-entering a well,
- resuming drilling operations after original rig release,
- an evaluation well or test hole,
- a coalbed methane well,
- drilling a well through a potential hydrocarbon zone for any other purpose,
- amending a previously issued well licence prior to spud or rig release,
- deepening an existing well while the rig is on hole, or
- changing an oil sands evaluation well to a conventional producing well (within 30 days of drilling).

Depending on the project, the applicant must submit one Schedule 1 along with one or more of the following forms:

- Schedule 4: Well Licence Application
- Schedule 4.1: Working Interest Participants—Wells
- Schedule 4.2: Multiwell Pad Location
- Schedule 4.3: Well H<sub>2</sub>S Information

For wells that will be drilled deeper than 150 m to supply water for domestic or stock watering purposes, a well licence application is required. Please contact ERCB Facilities Applications for details and instruction.

### **7.2 Project Submissions**

A project is defined as a network of facilities, pipelines, and/or wells that connect to a common facility. A project submission may consist of the consecutive submissions of related single licence applications or the single submission of multiple licence applications for related facilities, pipelines, and wells. The ERCB encourages applicants to identify related applications that are part of the same project through the use of a common reference number in the Applicant's Reference section.

**Numbered statements represent requirements and expectations (see Section 1.4).**

- 1) If the applicant is filing a project submission,
  - a) the application must be submitted under one company name using one Schedule 1, and

- b) the applicant must complete a separate Schedule 4 for each well in the project, unless it is a multiwell pad project.

### 7.3 Licence Expiry

Well licences expire one year from the date of issue if construction or operation has not yet started. After one year, the ERCB will cancel the expired licence from the active records.

- 2) If the applicant intends to proceed with a project for which a licence has expired, all applicable regulatory requirements, including participant involvement requirements (Section 2), must be fulfilled prior to filing a new application.

Due to the complexity of some developments, it is possible that the applicant may not be able to act on a licence before the expiry date. If licence expiry is imminent, the applicant should contact Facilities Applications for advice on how best to proceed.

- 3) Prior to initiating new construction when a licence is nearing expiry, the applicant must conduct a new resident/landowner search and determine if any new issues may have arisen since the licence was granted.
- 4) The applicant must advise Facilities Applications 30 days before licence expiry if it has commenced lease construction but has not spudded the well. This will ensure that the licence is not automatically cancelled.
- 5) If an applicant does not intend to proceed with the licence, it must notify Facilities Applications.

#### 7.3.1 Licence Extensions

The ERCB issues a licence for a term of one year. An applicant may request an extension to the expiry date of an applied-for licence at the time of application. Requests for extensions will be considered on a case-by-case basis, but the date of expiry will normally not extend beyond two years from the date the licence was issued.

The ERCB may extend the expiry date of a licence that has already been issued with a one-year term upon request of the licensee. However, a licence that was originally issued with a term greater than one year will not be extended.

- 6) To get an extended expiry date for an applied-for licence, the applicant must confirm at the time of application that it will update the associated survey and participant involvement program before it acts on the licence.
- 7) To get an extended expiry date for an existing licence, the licensee must submit documentation to Facilities Applications confirming that it will update the associated survey and participant involvement program before it acts on the licence.

### 7.4 Category Type and Consultation and Notification Requirements

The types of wells requiring a licence under *Directive 056* are listed in Table 7.1, along with respective consultation and notification requirements. The category type of a well is determined by the H<sub>2</sub>S content, H<sub>2</sub>S release rate, and proximity to the public.

- 8) The applicant must identify the correct category type for the proposed well project and perform all associated consultations and notifications.
- 9) For wells containing H<sub>2</sub>S, the applicant must base the category type on the maximum wellhead, cumulative drilling, producing, or completion H<sub>2</sub>S release rate. Applicants must review available production data and consider future production operations that may result in a reservoir originally not containing H<sub>2</sub>S gas evolving to gas containing H<sub>2</sub>S.

Stakeholder notification that has been completed as part of a *Directive 023* application for a new in situ oil sands project or an amendment to an existing project satisfies the participant involvement requirements for any related *Directive 056* application for the associated wells within the ERCB-approved in situ oil sands project area.

#### 7.5 Cavern Scheme Wells

The category type of a well drilled for the purpose of producing or injecting into a solution mining cavern or injecting into a hydrocarbon storage or disposal cavern is determined in accordance with Table 7.1.

- 10) Before submitting the well licence application, applicants must meet the requirements set out in Table 7.1, as well as the consultation and notification requirements, once in effect, set out in the soon to be released ERCB directive on requirements for solution mining, hydrocarbon storage, and disposal caverns. Until issuance of the cavern directive, questions regarding consultation and notification may be directed to the ERCB's Well Operations Group.
  - a) If outstanding concerns or objections are received in response to consultation or notification, a nonroutine well licence application must be filed.

#### 7.6 Exemptions

Well licence applications are not required for

- wells drilled to a depth of less than 150 m that are not intended to encounter or produce hydrocarbons,
- wells drilled to discover or evaluate a solid inorganic mineral (e.g., limestone quality test well), and
- oil sands evaluation wells drilled within an approved mine site, in accordance with Part 2, Section 4(5) of the *Oil Sands Conservation Regulation*.

**Table 7.1. Well category type and consultation and notification requirements**

Category	Name	Type	Description	Personal consultation and confirmation of nonobjection	Notification
B	Wells 0.00 mol/kmol H <sub>2</sub> S	140	Single well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Residents within 0.2 km</li> <li>• Residents within 0.3 km, if single oil wells with 0.0 mol/kmol H<sub>2</sub>S and continuous flaring</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Landowners within 0.1 km</li> <li>• Urban authorities within 1.5 km</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>
		141	Commercial or source water well		
		150	Multiwell pad		
C	Wells >0.00 mol/kmol H <sub>2</sub> S <0.01 m <sup>3</sup> /s H <sub>2</sub> S release rate	280	Single well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Landowners within 0.1 km with regard to setbacks</li> <li>• Residents within 0.2 km or the EPZ radius, whichever is greater</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Urban authorities within 1.5 km</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>
		290	Multiwell pad		
	Wells ≥ 0.01 m <sup>3</sup> /s but < 0.3 m <sup>3</sup> /s H <sub>2</sub> S release rate	360	Single well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Landowners within 0.5 km with regard to setbacks</li> <li>• Residents within 0.2 km or the EPZ radius, whichever is greater</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Urban authorities within 1.5 km</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>
		370	Multiwell pad		
D	Wells ≥ 0.3 m <sup>3</sup> /s but < 2.0 m <sup>3</sup> /s H <sub>2</sub> S release rate	570	Single well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Landowners within 0.5 km with regard to setbacks</li> <li>• Residents within 0.2 km or the EPZ radius, whichever is greater</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Local authorities</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Urban authorities within 1.5 km</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>
E	Wells ≥ 2.0 m <sup>3</sup> /s H <sub>2</sub> S release rate (deemed nonroutine)	610	Single well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Landowners within 1.5 km with regard to setbacks</li> <li>• Residents, local authorities, and urban authorities within the EPZ</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>
E	Wells ≥ 0.01 but < 0.1 m <sup>3</sup> /s release rate and within 0.5 km of urban centre (deemed nonroutine)	620	Proximity critical well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Landowners within 0.1 km with regard to setbacks</li> <li>• Residents and local authorities within 0.2 km or the EPZ radius, whichever is greater</li> <li>• Urban authorities within 1.5 km</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>

(continued)

**Table 7.1. Well category type and consultation and notification requirements**

Category	Name	Type	Description	Personal consultation and confirmation of nonobjection	Notification
	Wells $\geq 0.3$ but $< 2.0 \text{ m}^3/\text{s}$ release rate and well is within 5.0 km of urban centre (deemed nonroutine)	622	Proximity critical well	<ul style="list-style-type: none"> <li>• Landowners and occupants with regard to well-site location</li> <li>• Landowners and occupants with regard to well-site access</li> <li>• Landowners within 0.5 km with regard to setbacks</li> <li>• Residents and local authorities within 0.2 km or the EPZ radius, whichever is greater</li> <li>• Urban authorities within 5.0 km</li> </ul>	<ul style="list-style-type: none"> <li>• Crown disposition holders</li> <li>• Freehold coal rights owner or coal rights lessee</li> <li>• Unlighted airports within 1.6 km</li> <li>• Lighted airports within 5 km</li> </ul>

### 7.6.1 Abandoned Well Remediation

Approvals for abandoned well remediation do not require a *Directive 056* application. Companies responsible for the re-entry, repair, and reabandonment of a well must submit a nonroutine abandonment request to the ERCB Well Operations Group, indicating the reason for the re-entry, a plan for resolution of the issue, and a statement about whether the company is the current licensee of the well, holds the mineral rights, and has a current surface lease agreement. If the request is approved, Well Operations will issue a letter of approval. If the company is not the current licensee, a *Directive 056* application may be required.

Prior to submission of an application, authorization for re-entry, repair, and reabandonment must be obtained from the Alberta Department of Energy if applicable.

### 7.7 Records Corrections

There are no records corrections for well licences.

### 7.8 Licence Amendments

- 11) The applicant must be the licensee to file a well licence amendment.
- 12) The applicant must be able to demonstrate there are no outstanding concerns/objections to file a well licence amendment.
- 13) The licensee must file a well licence amendment application if any of the following information changes prior to spudding the well: surface ownership (Freehold and Crown), mineral ownership (Freehold and Crown), surface location, ground elevation, well purpose, surface coordinates, total depth, well type, terminating formation, regulation section, the emergency planning zone (EPZ), or number of occupied dwellings, public facilities, and/or places of business inside the EPZ.
- 14) The licensee must file a well licence amendment application while the rig is on hole deepening an existing well with no change in the well category or type if
  - a) the change in total depth is greater than 150 m, or
  - b) the terminating formation changes.

If (a) or (b) does not apply, the change in the total depth is captured through the submission of the licensee's drilling records.

- 15) The licensee must file a well licence amendment application to correct inadvertent data entry errors or transposition of numbers.
- 16) The licensee must file a well licence amendment application to change the bottomhole location prior to spudding the well.
  - a) Bottomhole location changes after spud date are captured through the submission of the licensee's directional survey.

#### 7.9 Re-entry/Resumption and Deepening

- 17) The licensee must file a well licence re-entry/resumption application when re-entering an abandoned well.
  - a) The licensee assumes responsibility for the well and any associated liabilities regardless of whether operations are subsequently conducted at the well.
- 18) The licensee must file a well licence re-entry/resumption application when resuming drilling of a well after rig release. A resumption application is not required if the licensee is resuming drilling within six months of spud to the same terminating formation and the type of drilling operation (e.g., vertical, horizontal) remains the same as originally licensed.
- 19) The licensee must file a well licence deepening application when deepening an existing well while the rig is on hole if that will result in an increase in the well category (e.g., from B to C or C to D; see Table 7.1).

#### 7.10 Participant Involvement Requirements

- 20) The applicant must ensure that the requirements set out in Section 2 are met for the radius set out in Table 7.1.
  - a) In cases where the completion or producing H<sub>2</sub>S release rate is greater than the drilling release rate, the applicant must fulfill the personal consultation and notification requirements applicable to the highest rate.
  - b) The level designation (Table 7.5) of a well must be based on the suspended/producing H<sub>2</sub>S release rate. The applicant may choose to fulfill the participant involvement requirements with regard to setbacks using the setback radius for the suspended/producing release rate.
- 21) The applicant must meet the information requirements as part of personal consultation and notification for all well licence applications (Section 2).
- 22) The applicant must provide information packages to those persons set out in Table 7.1 and be prepared to discuss the project if requested to do so by anyone who was sent an information package.
  - a) If personal consultation is required, the applicant must
    - i) provide the project-specific information package—this written information package must meet the information requirements described in Section 2 and

include any other information to assist in understanding the proposed development;

- ii) provide the letter from the Chairman of the ERCB;
- iii) provide the ERCB brochure *Understanding Oil and Gas Development in Alberta*,
- iv) provide the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*,
- v) provide the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
- vi) offer copies of all current ERCB EnerFAQs publications as set out on the ERCB Web site.

b) If notification is required, the applicant must provide the applicant's project-specific information package and the letter from the Chairman of the ERCB and offer copies of

- i) the ERCB brochure *Understanding Oil and Gas Development in Alberta*,
- ii) the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*,
- iii) the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
- iv) all current ERCB EnerFAQs publications as set out on the ERCB Web site.

23) If the applicant has obtained a Zero Flaring Agreement (see Directive 060), a copy must be submitted with the well licence application.

24) The ERCB does not require applicants to acquire road-use agreements prior to submitting its application; however, they must be in place prior to construction.

25) Applicants must meet the requirements in Section 8.3 when planning sour gas activity where residents are located within the EPZ.

## 7.11 Technical Requirements

The following are subsections under wells technical requirements and discuss various fields on Schedules 4, 4.1, 4.2, and 4.3.

### 7.11.1 Survey Plans

26) The applicant must attach a survey plan that

- a) meets all requirements stated in the *Oil and Gas Conservation Regulations (OGCR)*, Section 2.020;
- b) provides sufficient detail to accurately identify surface topography, surface improvements, and access roads;
- c) is formatted on 8½ x 14 inch paper size (multiple pages of this size may be used to include all survey information; Facilities Applications prefers an original of the survey plan; however, photocopies are accepted if they are clear);

- d) is current and valid:
  - i) less than 12 months old from the date of certification, or
  - ii) if more than 12 months from the date of certification, certified as correct by an Alberta Land Surveyor;
- c) shows the location of the well tied by bearings and distance to a monument, or in the case of a well in unsurveyed territory, the location determined in accordance with the Alberta Land Surveyors Association *Manual of Standard Practice*;
- f) shows the relation of the well to the boundaries of the quarter section shown by the coordinates from the two boundaries of the quarter section that are also the boundaries of the section (assuming a 20 m wide road allowance) and by calculated distances to the interior boundaries of the quarter section;
- g) shows the relation of the well location to the surface topography within 200 m of the well, including
  - i) elevation of the corners of the surface lease,
  - ii) elevation of any significant water bodies, and
  - iii) sufficient information to establish the general character of the topography and any predominant drainage patterns;
- h) in the case of long access roads (i.e., outside the 200 m radius) or where the well is close to survey section lines, shows sufficient information to establish the general character of the topography, predominant drainage patterns, and surface improvements;
  - i) shows the relation of the well location to
    - i) surface improvements,
    - ii) wells,
    - iii) coal mines, whether working or abandoned, and
    - iv) water wells within 200 m of the well; and
- j) indicates the depth of the water if the proposed well is in a water-covered area.
- k) For new CBM wells completed above the base of groundwater protection, applicants must meet the requirements found in Appendix 12 regarding survey plans and maps.

The survey plan should also reflect the distance to the nearest

- a) dwelling whether occupied part time or full time (e.g., house, seasonal cottage, trapper's cabin),
- b) publicly used development (e.g., church, community centre, campground, curling rink),
- c) place of business, or
- d) other surface development where members of the public may gather.

The ERCB will accept well licence applications where survey plans are based on remotely sensed, three-dimensional survey data like LiDAR if

- a) the survey plan clearly identifies that the data the survey is based on was acquired from remotely sensed data,
- b) the survey plan meets all components of requirement 26, above, and
- c) a final survey plan will be completed by a certified Alberta land surveyor once the proposed surface lease is surveyed for construction within 60 days of the start of construction.

#### 7.11.2 Emergency Response Planning

- 27) The emergency planning zone (EPZ) for wells containing H<sub>2</sub>S is based on the release rate for the well.

For Category E wells, Facilities Application staff and Emergency Planning and Assessment staff review the well licence application and emergency response plan (ERP) concurrently so that the well licence and the ERP approval are issued together.

Applicants are cautioned that it is a violation of privacy legislation to disclose in the public portion of a facility, pipeline, or well licence application any personal information that was obtained for emergency response planning purposes. Such information must be provided in confidence to the ERCB, in connection with emergency response planning requirements set out in *Directive 071*.

#### 7.11.3 Critical Well

A critical well is defined by the following criteria:

- RR  $\geq 2.0 \text{ m}^3/\text{s}$ ,
- RR  $\geq 0.3 \text{ m}^3/\text{s}$  but  $< 2.0 \text{ m}^3/\text{s}$  and the well is located within 5.0 km of an urban centre,
- RR  $\geq 0.1 \text{ m}^3/\text{s}$  but  $< 0.3 \text{ m}^3/\text{s}$  and the well is located within 1.5 km of an urban centre, or
- RR  $\geq 0.01 \text{ m}^3/\text{s}$  but  $< 0.1 \text{ m}^3/\text{s}$  and the well is located within 500 m of an urban centre.

- 28) If the proposed well is critical by the above standards, the applicant must meet the drilling requirements detailed in ID 97-06, *Directive 036: Drilling Blowout Prevention Requirements and Procedures*, and *IRP Volume 1: Industry Recommended Practices for Drilling Critical Sour Wells*.
- 29) If the proposed well is deemed to be Category E, the applicant must file a nonroutine application.

#### 7.11.4 Minimum Casing Testing Requirements—Re-entry and Resumption of Drilling

The following requirements apply when re-entering an existing wellbore, whether abandoned or not, to deepen, whipstock, recomplete (abandoned well only), or recomplete horizontally.

For the tests set out below, the required pressures are applied at surface and are based on a wellbore fluid density of 1000 kg/m<sup>3</sup>. The test pressure is adjusted according to the

fluid density in the wellbore at the time of the test. For a satisfactory pressure test, a stabilized pressure is maintained over a 10-minute interval.

30) For all categories of wells with only surface casing set:

- a) Prior to commencing re-entry or resumption of drilling operations, the licensee must
  - i) ensure that there is sufficient casing set and cemented in the well for well control purposes (see *Directive 008*), and
  - ii) pressure test the existing casing to the lesser of 7000 kPa or 50 times the casing setting depth (m).

31) For Category B, C, or D wells that will be drilled overbalanced or recompleted:

- a) Prior to commencing re-entry or resumption of drilling operations, the licensee must
  - i) ensure that there is sufficient casing set and cemented in the well for well control purposes (see *Directive 008*), and
  - ii) pressure test the existing casing to 67 per cent of the bottomhole pressure at the casing setting depth or the depth at which the window will be cut.
- b) If the existing casing is to be used for production purposes, prior to placing the well on production, the licensee must
  - i) run a casing inspection log or combination of logs, fully interpreted on a joint-by-joint basis, which
    - determines the percentage penetration of anomalies,
    - distinguishes between internal and external corrosion, and
    - has the ability to detect holes, pits, perforations, metal loss, and metal thickness,
  - ii) use the results of the casing inspection log in the following equation to verify that the minimum internal yield ( $P_y$ ) of the existing casing meets the minimum required casing burst pressure set out in *Directive 010*:

$$P_y = \frac{2Y_p t}{D}$$

Where:

$P_y$  = minimum internal yield (kPa)

$Y_p$  = specified minimum yield strength (kPa)

$t$  = reduced wall thickness (mm) (minimum remaining well thickness – not an average)

$D$  = nominal outside diameter (mm),

- iii) pressure test the casing to a pressure of 85 per cent of the minimum required casing burst pressure set out in *Directive 010*.

32) For Category B, C, or D wells that are drilled underbalanced and any Category E well:

- a) prior to commencing re-entry or resumption of drilling operations, the licensee must
  - i) ensure that there is sufficient casing set and cemented in the well for well control purposes,
  - ii) run a casing inspection log or combination of logs, fully interpreted on a joint-by-joint basis, that
    - determines the percentage penetration of anomalies,
    - distinguishes between internal and external corrosion, and
    - has the ability to detect holes, pits, perforations, metal loss, and metal thickness,
  - iii) use the results of the casing inspection log in equation 28(b)(ii) above to verify that the minimum internal yield ( $P_y$ ) of the existing casing meets the minimum required casing burst pressure set out in Directive 010, and
  - iv) pressure test the existing casing to 67 per cent of the highest anticipated formation pressure that will be encountered.
- b) If the existing casing is to be used for production purposes, prior to placing the well on production, the licensee must
  - i) run another casing inspection log (this casing inspection log may be a log that has regard for internal wall loss and may be compared to the data from the log conducted prior to drilling [see 28(b)(ii) above],
  - ii) ensure that the formula set out in 28(b)(ii) is now satisfied based on the least wall thickness remaining,
  - iii) ensure that the minimum internal yield ( $P_y$ ) of the existing casing meets the minimum required casing burst pressure set out in Directive 010, and
  - iv) pressure test the casing to a pressure of 85 per cent of the minimum required casing burst pressure set out in Directive 010.

33) To request a waiver from the required casing inspection logs for a re-entry or resumption of well, the licensee must submit the well licence application as nonroutine and provide confirmation that the well

- a) is not a Category E well,
- b) is not expected to encounter any new pools,
- c) will not be deepened or drilled as a whipstock or directional well,
- d) is not located within or in proximity to enhanced recovery schemes,
- e) has not been re-entered or undergone resumption of drilling operations before,
- f) has surface casing or production/intermediate casing that is cemented and isolated to the base of groundwater protection and there are no known hydrocarbons remaining open in any uncemented intervals,
- g) does not have a surface casing vent flow or have gas migration problems,
- h) is not located in an area that has high incidents of casing corrosion, and
- i) was not originally drilled as a directional or horizontal well.

### 7.11.5 Terminating Formation

For the purpose of well licensing, the terminating formation is defined as the deepest formation in which the well will terminate and which the applicant has the right to produce for all intended purposes of the well.

The applicant may drill to a maximum overhole depth of 15 m below the base of the terminating formation. This overhole depth is permitted to accommodate logging tools and casing.

- 34) The applicant must not identify any formation(s) within the 15 m overhole as the terminating formation on a well licence application unless the applicant holds the mineral rights.
- 35) The applicant must have the permission of the mineral rights holder, whether Crown or Freehold owner or lessee, to exceed the 15 m maximum overhole depth.

### 7.11.6 Lahee Classifications

A Lahee classification is a “*pre-spud*” assignment given to each well based on the geological complexities and the known existence of hydrocarbon accumulations (pools) in the area where the well is to be drilled. The classification takes into account the general degree of risk of geological failure. Refer to Table 7.2 for individual classification descriptions and to schematic Figure 7.1.

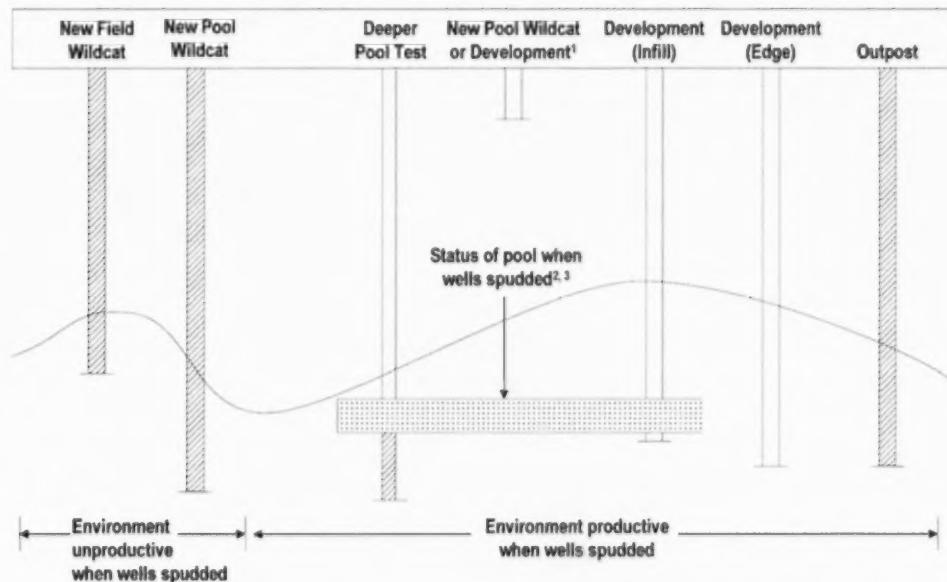

Table 7.2. Lahee classification

Lahee classification	Description
New Field Wildcat (NFW)	An NFW well is located at a considerable distance beyond the limits of known pools and is outside the boundaries of existing fields. The well is drilled in an area where hydrocarbons have not yet been discovered. The geological risk of this type of well is very high: in the absence of the discovery of a new pool, the well would be deemed unsuccessful.
New Pool Wildcat (NPW)	The objective of an NPW well is the discovery of a new pool(s) in all zones that the well encounters. The well is located in an already discovered field. The geological risk of this type of well is very high: in the absence of the discovery of a new pool, the well would be deemed unsuccessful. In circumstances where the well is in relatively close proximity to the limits of a known pool(s), the NPW classification must be based on technical data suggesting that a new pool will be encountered. A well drilled within or in close proximity to the limits of a known pool(s) but terminating shallower than the known pool(s) is normally classified as NPW, except in the case where pre-existing wells in close proximity to the well have logs and/or tests that strongly suggest the existence of shallower pools to be penetrated by the well.
Deeper Pool Test (DPT)	A DPT well is located within or in close proximity to a known pool(s) and is drilled with the objective of exploring for new, undiscovered pool(s) below the deepest of the known pool(s). Only the interval below the deepest of the known pool(s) is exploratory and carries a high geological risk. The remaining metreage in a DPT is development, with low geological risk. In circumstances where the exploratory portion of the well is in relatively close proximity to the limits of a known pool(s), the DPT classification must be based on technical data suggesting that a new pool will be encountered.
Outpost (OUT)	An OUT well is drilled with the intention of extending a known pool by a considerable distance. A well in proximity to a known pool but whose outcome is uncertain because of geological complexities might also be classified as OUT. There would be some geological risk associated with drilling an OUT well.

(continued)

**Table 7.2. Lahee classification (concluded)**

Lahee classification	Description
Development (DEV)	The objective of a DEV well is to further exploit or extend a known pool(s). The well may be inside of the established limits of the pool or in close proximity to the edge of the pool(s). The DEV classification should be used even if the well is drilled slightly deeper than the target pool, especially where the deeper strata to be penetrated have no hydrocarbon-bearing potential. The geological risk of this type of well is low.  Wells licensed with a well type of production and substance of bitumen are DEV.
Re-entry (REN)	A REN classification is assigned to a well that re-enters an existing wellbore for the purpose of recompleting the well as a producer or service well with no new strata being drilled. If new strata are to be drilled (e.g., by deepening, whipstock, or sidetracks), the well is assigned the appropriate Lahee classification.
Development Service Well (DSW)	A DSW well is drilled to introduce fluids into a formation or observe the performance of a reservoir. Water injection, steam injection, and observation wells are examples of DSW wells.
Evaluation Oil Sands (OV)	An OV well is drilled in an oil sands area to evaluate the oil sands and is not intended to produce hydrocarbons. Such wells will be licensed under Section 2.030 of the <i>OGCR</i> .
Test Hole (TH)	A TH well is drilled for geological and geophysical stratigraphic evaluation purposes and is not intended to produce or expected to encounter hydrocarbons. Such wells will be licensed under Section 2.030 of the <i>OGCR</i> .
Experimental (EX)	An EX well is part of an ERCB-approved experimental scheme. Such wells will be licensed under Section 2.030 of the <i>OGCR</i> .
Other (OTH)	A well drilled for water production, brine production, gas storage, water disposal, or any other purpose not covered by other Lahee classifications is classified as OTH. It may be licensed under Section 2.020 or 2.040 of the <i>OGCR</i> .

- <sup>1</sup> Shallower wells may be drilled on the basis of uphole hydrocarbon evidence at adjacent wells and, therefore, the development category may be appropriate.
- <sup>2</sup> The horizontal shaded bar represents the cross-section of a pool as previously delineated before the shown wells were spudded. (Other pools may exist on the section, but they have not yet been discovered.)
- <sup>3</sup> The left edge of this pool is known to terminate where indicated. The exact position of the right edge has not been defined.

**Figure 7.1. How to classify a well**

#### **7.11.6.1 Technical Considerations**

The following describes the technical considerations for Lahee classifications:

- The Lahee classification takes into account all zones to be penetrated by the well.
- The Lahee classification takes into account any pre-existing exploited offset pools, as well as pre-existing wells with logs and/or tests that strongly suggest the presence of pools, although the pools may not have yet been exploited. In both cases, the ERCB would consider the pools as previously discovered.
- Step-out distances will vary depending upon the size and trend of pools previously encountered in the region.
- The ERCB's official designation of pool orders (formerly known as G-orders) have no bearing on the Lahee classification. This is because they may not have been issued for nearby pools and because their boundaries may not have been updated to reflect current knowledge regarding areal extent and continuity of pools.

#### **7.11.6.2 Process and Review Information**

- Lahee classifications are to be selected by the applicant in accordance with the definitions provided in Table 7.2.
- The Lahee classification is not reviewed by ERCB staff prior to the issuance of the well licence.
- It is strongly recommended that the licensee review its well licence to ensure accuracy of the Lahee classification selection. In the event that the licensee detects an incorrect selection, a letter may be sent to the ERCB Reserves and Pore-Space Management Group requesting a revision. The Reserves and Pore-Space Management Group will issue a letter acknowledging the revision. As is the case with new licences issued, the revision request will not be reviewed for correct selection.
- As the Lahee classification is a risk assessment based upon pre-spud information, it would not be appropriate for a licensee to request a Lahee classification revision after the well has been drilled and results have been obtained.
- The ERCB may review a well's Lahee classification at any time.
- If the ERCB requires additional data in support of the licensee's Lahee classification selection, a letter will be sent to the licensee to the attention of the contact identified on Schedule 1 indicating that
  - the licensee has 30 days to file a submission package in support of its Lahee classification selection, and
  - in the absence of a submission within 30 days, the ERCB will revise the classification to the ERCB planned revision stated in the letter.
- Submission packages in support of a licensee's Lahee classification should include a covering letter stating the views of the licensee and any pre-spud technical information (maps, seismic, etc.) in support of retaining the original Lahee classification selection.

- The ERCB Reserves and Pore-Space Management Group will review submissions and issue a written response of its decision. In some cases, meetings to exchange information may be necessary.

The ERCB records the official Lahee classification assignment for all wells drilled in Alberta.

#### 7.11.7 Assigning Initial Confidentiality to New Wells

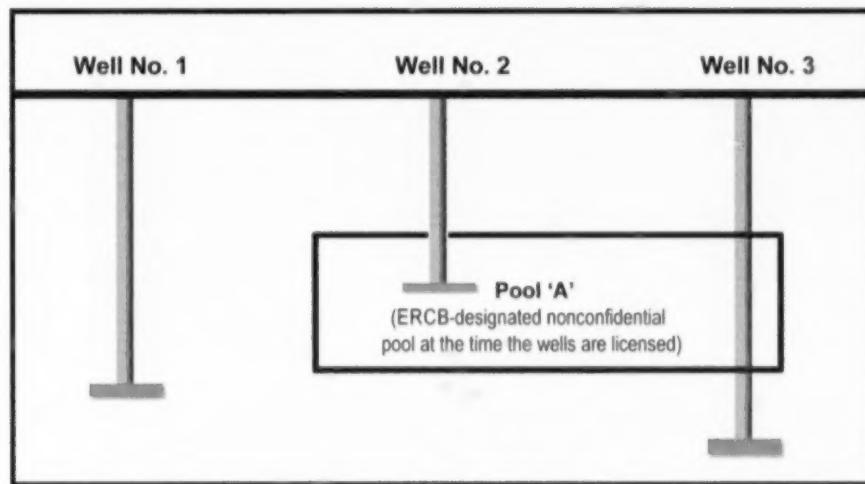

The initial confidential status on new wells is based on the provisions described in the OGCR, Section 12.150, and the *Oil Sands Conservation Regulations*, Section 15. Table 7.3 is a guide for determining the appropriate initial confidential status of new wells. Figure 7.2 provides well scenarios to assist in assigning confidentiality to OUT, DPT, DEV, DSW, and REN wells.

##### 7.11.7.1 Confidentiality Considerations

- A confidentiality assignment takes into account all zones to be penetrated by the well.
- The ERCB's official designation of pool orders (formerly known as G-orders) has a direct impact on confidentiality assignments. The most recent official pool order boundaries are on the ERCB Web site at [www.ercb.ca](http://www.ercb.ca).

**Table 7.3. New well initial confidential status based on Lahee classification**

Lahee classification	New well confidential status
NFW, NPW, TH, OV, EX	(C) – CONFIDENTIAL
OUT, DPT, DEV, DSW, REN	(C) – CONFIDENTIAL if all zones penetrated by the well are outside the limits of an ERCB-designated pool(s) (formerly known as G-orders) or inside the boundaries of an existing ERCB-designated confidential pool. Well No. 1 in Figure 7.2 demonstrates this scenario.  (NC) – NONCONFIDENTIAL if the well terminates in or just below an ERCB-designated nonconfidential pool. Well No. 2 in Figure 7.2 demonstrates this scenario. If the well type and substance are production of crude bitumen in an oil sands area, the well is also nonconfidential.  (CB) – CONFIDENTIAL BELOW if one or more up-hole zones penetrated by the well is inside an ERCB-designated nonconfidential pool. The confidential below formation name is the name of the deepest designated pool the well penetrates. Well No. 3 in Figure 7.2 demonstrates this scenario.
OTH	(NC) – NONCONFIDENTIAL

**Figure 7.2. Well scenarios to assist in assigning confidentiality and drill cutting sample requirements**

#### **7.11.7.2 Process and Review Information**

- Initial confidentiality statuses are to be selected by the applicant.
- Initial confidentiality selections are not reviewed by ERCB staff prior to the issuance of a well licence.
- The ERCB strongly recommends that the licensee review its well licence to ensure accuracy of the initial confidentiality status. In the event that the licensee detects an incorrect selection, it may send a letter to the ERCB Reserves and Pore-Space Management Group requesting a revision. As one of the ERCB's broad mandates is dissemination of information regarding the oil and gas resources of Alberta, a request to revise an initial selection may be subject to review by ERCB staff. The Reserves and Pore-Space Management Group will issue a letter in response to all requests.
- Initial confidentiality reviews will be performed by ERCB staff shortly after a well licence is issued.
- In cases where the selection does not appear consistent with the regulations, the ERCB may issue a letter requesting information to support the confidentiality assignment. The letter will be sent to the contact identified on Schedule 1 and will indicate that
  - the licensee has 30 days to file a submission package in support of the licensee's initial confidentiality selection, and
  - in the absence of a submission within 30 days, the ERCB will revise the initial confidentiality to the ERCB planned revision stated in the letter.
- Submission packages should include a covering letter stating the views of the licensee and any information in support of retaining the initial confidentiality selection.
- The ERCB will review submissions and issue a written response of its decision. In some cases, meetings to exchange information may be necessary.

### **7.11.7.3 Ongoing Confidentiality Maintenance**

Ongoing confidentiality maintenance may result in further revisions. After a well has been drilled, a licensee may request a revision to its confidentiality assignment based upon information gained as a result of drilling. If the revision meets the criteria in the regulations, the ERCB will revise the confidentiality. The ERCB will provide a written response to the request.

For each well carrying a confidential status, the ERCB will initially assign an expected confidentiality release date of one year from its finished drilling date. However, the ERCB may scrutinize a well's confidentiality at any time, and if it meets the conditions for release in accordance with Section 12.150 of the *OGCR* or Section 15 of the *Oil Sands Conservation Regulations*, its confidential status will be revised by ERCB staff. Notification will not be provided to the licensee.

### **7.11.8 Drill Cutting Sample Requirements**

Drill cutting sample requirements are determined using Figure 7.3 and Table 7.4, which describes the appropriate drill cuttings samples required based upon a well's Lahce classification described in Table 7.2. In addition, Figure 7.2 provides well scenarios to assist in assigning drill cutting sample requirements.

- 36) The applicant must submit drill cuttings in 5 m intervals and in accordance with Section 11.010 of the *OGCR*.

The ERCB may periodically identify areas where geological complexities dictate that additional samples should be taken. In those cases, the ERCB will notify the licensee of the revised requirements before drilling commences.

### **7.11.9 Groundwater Protection**

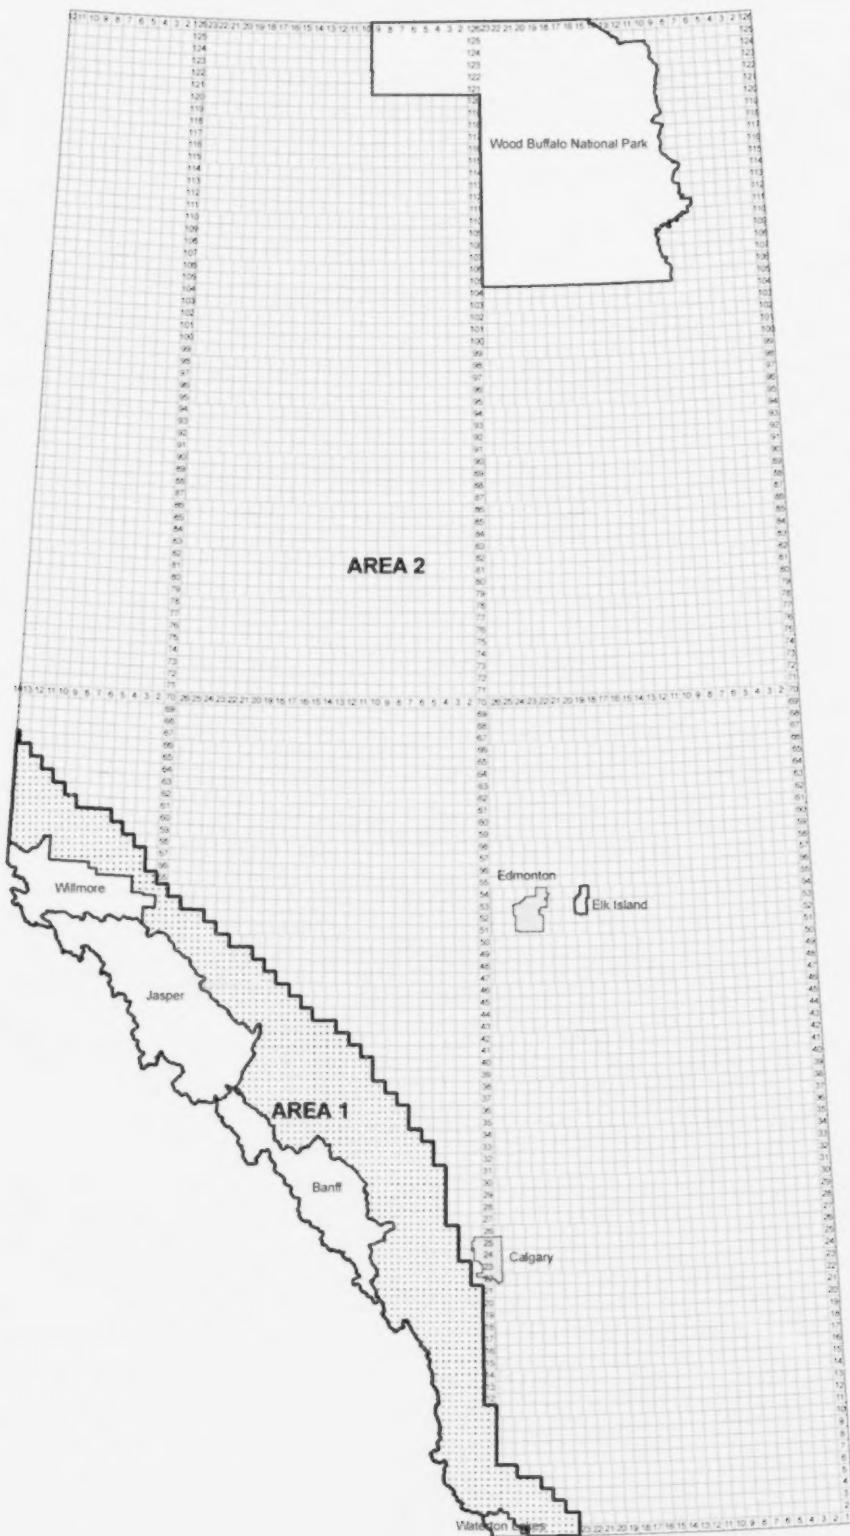

- 37) Applicants must ensure that nonsaline groundwater is protected during drilling operations by
  - a) meeting the requirements of Section 6.080 of the *OGCR* and *Directive 020: Well Abandonment* so that nonsaline aquifers (groundwater containing less than 4000 milligrams per litre [mg/l] total dissolved solids) will be covered by cementing surface casing, cementing the next casing string, or appropriate placement of open-hole abandonment plugs, and
  - b) referring to ST 55-2007 to determine if a reference well or depth below ground level is available to determine the base of groundwater protection. The Base of Groundwater Protection (BGP) Query Tool is also available on the ERCB DDS site. For questions relating to the BGP, contact the ERCB Economics, Environment, and Social Analysis Section by telephone at 403-297-8330 or by e-mail at [enviro.services@ercb.ca](mailto:enviro.services@ercb.ca).

### **7.11.10 Surface Casing and Exemptions**

*Directive 008* sets out the requirements for determining surface casing depth for wells to be drilled and gives specifics on where surface casing is not required.

38) To obtain a surface casing exemption in accordance with *Directive 008* (Section 3), the applicant must file a nonroutine application and include the following information, where applicable:

- a) Geological data
  - i) Identify all zones from surface to total depth.
  - ii) Identify gas potential in the hydrocarbon-bearing zones and provide an isopach map showing the extent of the productive zone(s).
  - iii) Identify any nonthermal enhanced recovery schemes within 1 km of the proposed well.
  - iv) Identify any thermal schemes within 1 km of the proposed well.
  - v) Identify the location of any water well within a 200 m radius of the proposed well.
- b) Operations Data
  - i) Review offset wells within a 3 km area from surface to the terminating formation and provide the following for each well:
    - well location (unique well identifier),
    - zones and depths of severe lost circulation,
    - zones and depths of artesian water flows,
    - zones and depths of kicks and blowouts,
    - estimated unstimulated absolute open flow (AOF) rate,
    - H<sub>2</sub>S content from surface to set casing depth,
    - formation pressures, and
    - maximum pressure gradient of any formation to the terminating depth.
  - ii) For horizontal wells, indicate if intermediate casing will be set prior to drilling the horizontal section.
  - iii) Provide the field kick rate.

**Table 7.4. Drill cutting sample requirements**

<b>Area 1 (see Figure 7.3)</b>		
<b>Lahee classification</b>	<b>Well Scenario</b>	<b>Drill cutting sample requirement</b>
NFW, NPW, EX		Base of surface casing-to-total depth
REN, TH, OTH		No drill cutting samples required
DPT, OUT	<p>Well falls outside all ERCB-designated pools (formerly known as G-orders) from surface to total depth (see Well No. 1 in Figure 7.2).</p> <p>or</p> <p>Well falls inside an ERCB-designated pool at total depth (see Well No. 2 in Figure 7.2).</p> <p>or</p> <p>Well penetrates an ERCB-designated pool and is drilling to a deeper horizon (see Well No. 3 in Figure 7.2).</p>	<p>Base of surface casing-to-total depth</p> <p>30 m above shallowest potential hydrocarbon bearing horizon-to-total depth</p>
DEV, DSW	<p>Well meets one of the exceptions described below.</p> <p>Well does not meet one of the exceptions described below.</p>	<p>No drill cutting samples required</p> <p>Sample requirements as DPT and OUT wells above</p>
<b>Area 2 (see Figure 7.3)</b>		
<b>Lahee classification</b>	<b>Well Scenario</b>	<b>Drill cutting sample requirement</b>
NFW		Base of surface casing-to-total depth
NPW, EX		30 m above shallowest potential hydrocarbon bearing horizon-to-total depth
OV, REN, TH, OTH		No drill cutting samples required
DPT, OUT	<p>Well falls outside all ERCB-designated pools from surface to total depth (see Well No. 1 in Figure 7.2).</p> <p>Well falls inside an ERCB-designated pool at total depth of Well No. 2 in Figure 7.2.</p> <p>Well penetrates an ERCB-designated pool and is drilling to a deeper horizon (see Well No. 3 in Figure 7.2).</p>	<p>30 m above shallowest potential hydrocarbon bearing horizon-to-total depth</p> <p>No drill cutting samples required</p> <p>30 m above the first potential hydrocarbon bearing horizon to be encountered after the well drills through the deepest ERCB designated pool-to-total depth</p>
DEV, DSW	<p>Well meets one of the exceptions described below.</p> <p>Well does not meet one of the exceptions described below.</p>	<p>No drill cutting samples required</p> <p>Same requirements as DPT and OUT wells above</p>
<b>Exceptions</b>		
1) On Schedule 4, Part 5, the well "Type" is "Production" and "Well Substance" is "Crude Bitumen."		
2) On Schedule 4, Part 7, the well "Type of Drilling Operation" is "Horizontal."		
3) On Schedule 4, Part 7, the well "Projected Total Depth" is less than 600 m.		

39) In addition to the above, the applicant must provide a map that illustrates the area 3 km around the proposed well and shows

- surface and bottomhole locations of the proposed well,
- existing wells within 3 km of the proposed well that are drilled to the proposed terminating zone,
- wells with hole problems,,

- d) AOF gas rates for existing wells,
- e) proximity to thermal wells,
- f) proximity to water bodies, and
- g) if the proposed well is in an established area, as defined in *Directive 008*.

#### **7.11.11 Right to Produce or Operate**

40) Prior to submitting a well licence application, the applicant must

- a) be a working interest participant;
- b) be entitled to the right to produce the oil, gas, or crude bitumen from the well or have the right to drill or operate the well for the authorized purpose;
- c) acquire the right to produce from the intended formation for the complete drilling spacing unit (DSU);

Part 4 of the *OGCR* states requirements for normal DSUs and for special DSUs. Applicants need to be aware that fractional sections require a special DSU if the size of the fractional section differs by more than 5 per cent from a normal DSU. The applicant must ensure that it acquires the rights for the entire DSU for the intended purpose of the well prior to submitting the application.

- d) if applicable, obtain permission from the Alberta Department of Energy to produce minerals under water bodies on Freehold mineral lands, as the Crown holds the mineral rights beneath water bodies; and
- e) because normal DSUs do not include the road allowance, contact the Alberta Department of Energy if the bottomhole location of the well is in a road allowance.

There are two types of mineral ownership in Alberta: Freehold and Alberta Crown. It is the applicant's responsibility to ensure that it has reviewed the mineral ownership for the entire DSU and acquired the necessary mineral rights prior to application. For the purpose of well licence applications, Federal Crown minerals are treated as Freehold.

Water source and injection/disposal wells do not require the acquisition of a complete DSU. A letter authorizing the activity from the mineral rights lessee or, in the case of undisposed minerals, the Alberta Department of Energy, is sufficient to demonstrate the right to produce or operate the well.

Licensees must ensure that they maintain the right to produce or operate the well for its intended purpose from application through to the commencement of drilling and ultimately throughout the life of the well. Loss of mineral rights at any point after application submission and prior to the commencement of drilling may result in licence cancellation and enforcement measures for noncompliance.

The issuance of a well licence or conducting of an ERCB audit are not to be relied upon by the licensee or third parties as a legal determination or confirmation of mineral entitlement or of the right to produce hydrocarbons or to conduct other activities on lands covered by the licence.

#### **7.11.11.1 Mineral Lease Continuation**

The Alberta Department of Energy does not consider an application for a mineral lease continuation sufficient to demonstrate that an applicant has the rights for all of the intended purposes of the well.

- 41) Prior to submitting a well licence application with ERCB Facilities Applications, the applicant must receive a signed approval granting a mineral lease continuation from the Alberta Department of Energy.

#### **7.11.11.2 Wellbore Rights for Abandoned Wells**

Wellbore rights are separate and distinct from mineral rights and require separate approval before a well licence application can be filed.

- 42) Prior to filing a well licence application with Facilities Applications, the applicant must acquire the rights to the abandoned wellbore:
  - a) For Freehold mineral rights, the applicant must obtain the abandoned wellbore rights from the licensee of record.
    - i) The applicant must file a nonroutine application if it is unable to acquire an agreement from the licensee of record.
  - b) For Crown mineral rights,
    - i) if the mineral rights have not expired, the applicant must obtain the abandoned wellbore rights from the licensee of record;
    - ii) if the mineral rights have expired, the abandoned wellbore rights revert to the Crown. In this case, the applicant must obtain well re-entry approval from the Crown using the Request for Well Re-Entry Approval form available on the Alberta Department of Energy Web site.

#### **7.11.12 Setback Requirements**

There are specific setback distances between wells containing H<sub>2</sub>S gas and permanent dwellings, unrestricted country developments, urban centres, or public facilities.

- 43) The applicant must meet the applicable setback requirements in Table 7.5 based on the calculated H<sub>2</sub>S release rate for the proposed well.
- 44) The level designation must be based on the suspended/producing H<sub>2</sub>S release rate.

**Table 7.5. Setback requirements for wells containing H<sub>2</sub>S**

Level	H <sub>2</sub> S release rate (m <sup>3</sup> /s)	Minimum distance
1	$\geq 0.01$ to $< 0.3$	0.1 km, as stated in Section 2.110 of the OGCR
2	$\geq 0.3$ to $< 2.0$	0.1 km to individual permanent dwellings and unrestricted country developments 0.5 km to urban centres or public facilities
3	$\geq 2.0$ to $< 6.0$	0.1 km to individual permanent dwellings up to 8 dwellings per quarter section 0.5 km to unrestricted country developments 1.5 km to urban centres or public facilities
4	$\geq 6.0$	As specified by the ERCB but not less than Level 3

The following subsections describe ERCB setback requirements applicable to wells.

#### **7.11.12.1 Water Bodies**

A water body may be natural or manmade and contain or convey water continuously, intermittently, or seasonally.

For the purposes of *Directive 056*, a natural water body is defined as any location where water flows or is present, whether the flow or the presence of water is continuous, intermittent, or occurs only during a flood. This includes, but is not limited to, the bed and shore of a river, stream, lake, creek, lagoon, swamp, marsh, slough, muskeg, and other natural drainage, such as ephemeral draws, wetlands, riparian areas, floodplains, fens, bogs, coulees, and rills.

For the purposes of *Directive 056*, a manmade water body may include, but is not limited to, a canal, drainage ditch, reservoir, dugout, and other manmade surface feature.

- 45) The well centre must be sited a minimum of 100 m from a water body.
- 46) To submit a routine well licence application if the well centre is located on Freehold or Crown land but does not meet the 100 m setback requirement, the applicant must
  - a) have a Crown disposition if the well centre is located on Crown land;
  - b) maintain natural drainage if there is intermittent drainage or a spring/artesian flow across the well site or access road on Freehold and Crown land; and
  - c) have acceptable measures in place to protect the water body during drilling and future production operations and mitigate the consequences of a spill on Freehold and Crown land.
    - i) Acceptable measures must include one or more of the following as required:
      - site and berms constructed using impermeable materials,
      - synthetic liner,
      - vacuum truck,
      - absorption material,
      - enclosed systems with tankage, and
      - textile mat.
    - ii) The ERCB expects the measures to comply with all relevant requirements of provincial and federal legislation and regulation (including the *Environmental Protection and Enhancement Act*, *Water Act*, *Public Lands Act*, *Fisheries Act*, and the *Navigable Waters Protection Act* and the regulations thereunder).
- 47) If the applicant cannot meet the requirements to file a routine well application or proposes alternative mitigative measures, the applicant must submit a nonroutine application.
  - a) To submit a nonroutine application, the applicant must attach information outlining the measures in place to protect the water body from contamination during drilling and future production operations and to mitigate the consequences of a spill.

If there is potentially a water body on or near the proposed well's lease, the routine well application may be referred to the Nonroutine Section for further investigation. Subsequently, the applicant may need to demonstrate the efforts it has taken to determine the presence of any water body and to delineate the extent of any identified.

48) If a water body will be disturbed by the well activity, the applicant must submit to the ERCB the approval received under the *Water Act* from Alberta Environment.

#### **7.11.12.2 Surface Improvements**

For the purposes of *Directive 056*, a surface improvement is defined as a

- railway, pipeline, canal, or other right-of-way,
- road allowance and surveyed roadway,
- dwelling,
- industrial plant,
- aircraft runway or taxiway,
- building used for military purposes,
- permanent farm building,
- school, or
- church.

A surveyed road/road allowance is a surface improvement; however, specific setback requirements are discussed under Section 7.11.12.3.

49) The well centre must be sited a minimum of 100 m from a surface improvement.

50) To submit a routine well licence application, the applicant must

- a) meet the 100 m setback requirement, or
- b) acquire the consent of the surface improvement owner if the well centre does not meet the 100 m setback for a railway, pipeline, gas co-op, canal, or other right-of-way.

51) For all other surface improvements, if the surface improvement owner consents to relaxation of the 100 m setback requirement, the applicant must submit a nonroutine well licence application. If the ERCB determines that operations can be conducted safely, the ERCB may approve the application.

52) If consent from the surface improvement owner cannot be acquired, the applicant must file a nonroutine well licence application.

#### **7.11.12.3 Surveyed Road/Road Allowance**

A surveyed road/road allowance, whether developed or undeveloped, is considered a surface improvement but is subject to a 40 m setback. A lease/access road located on Crown or Freehold land or a private access road is not considered a surface improvement and is not subject to a setback.

The ERCB will consider a lesser distance if the applicant demonstrates that special circumstances exist and that the owner or administrator of the surface lands does not object.

53) To apply for a relaxation from the 40 m setback requirement, the applicant must

- a) file a nonroutine application;
- b) attach supporting documentation, including proof of owner/administrator consent; and
- c) upon ERCB request, submit geographical/topographical information and any proposed mitigative measures.

54) The applicant is expected to consider other setback restrictions set out by Alberta Transportation and local authorities.

#### 7.11.12.4 Airports

55) If the applicant proposes to drill a well within

- a) 5 km of a lighted (registered or unregistered) airstrip/acrodrome or
- b) 1.6 km of an unlighted (registered) airstrip/acrodrome

prior to filing the well licence application, the applicant must advise the Regional Manager, Air Navigation Requirements, Transport Canada, using the Transport Canada Drilling Rig Clearance Form (Appendix 5).

56) If the applicant proposes to drill a well within a 1.6 km radius of a private, unregistered, and unlighted airstrip/acrodrome, the applicant must notify the owner/operator prior to submitting the well licence application to ERCB Facilities Applications.

- a) If notification is required, the applicant must provide
  - i) the applicant's project-specific information package, including the height of the derrick and the anticipated drilling dates,
  - ii) the letter from the Chairman of the ERCB, and
- b) offer copies of
  - i) the ERCB brochure *Understanding Oil and Gas Development in Alberta*,
  - ii) the ERCB publication *EnerFAQs No. 7: Proposed Oil and Gas Development: A Landowner's Guide*,
  - iii) the ERCB publication *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project*, and
  - iv) all current ERCB EnerFAQs publications as set out on the ERCB Web site.

#### 7.11.12.5 Coal Mines

Sections 6.140 to 6.190 of the OGCR detail the requirements if a well is proposed within 3 km of a subsurface mine, either working or abandoned.

If the applicant proposes to drill a well within 3 km of a working mine or within 400 m of an abandoned mine, a routine well licence application may be filed if the requirements of Sections 6.140 to 6.190 of the *OGCR* will be met.

- 57) The applicant must file a nonroutine application if the proposed well
  - a) will not meet the requirements of Sections 6.140 to 6.190 of the *OGCR*, or
  - b) will be within 15 m of a coal mine shaft.
- 58) If the applicant intends to drill through a bed or seam of coal, the applicant must notify in writing all Freehold coal rights owners and the lessees of Freehold or Crown coal rights (unless the applicant is also the holder of the coal rights). This notification must precede the filing of a well application with ERCB Facilities Applications.

The applicant is not required to notify the Crown regarding coal rights, whether or not the coal rights have been leased.

#### **7.11.13 ERCB Environmental Requirements**

- 59) The applicant is expected to assess each well site and access road and to develop plans to conserve, reclaim, and mitigate the effects of its activities. These plans should include measures to contain any spills and prevent and control the following: soil and water contamination, soil erosion, siltation of any drainage courses or water bodies, and slope instability.
- 60) To submit a routine well licence application, the applicant must meet the following requirements:
  - a) For CBM wells completed above the base of ground water protection, the applicant must meet the environment requirements listed in Appendix 12.
  - b) The applicant must have acceptable measures in place to protect the environment during drilling and future production operations and to mitigate the consequences of a spill.
    - i) Acceptable measures for on-site containment must include one or more of the following as required:
      - site and berms constructed using impermeable materials,
      - synthetic liner,
      - vacuum truck,
      - absorption material,
      - enclosed systems with tankage, and
      - textile mat.
    - ii) The ERCB expects the measures to comply with all relevant requirements of provincial and federal legislation and regulation (including the *Environmental Protection and Enhancement Act*, *Water Act*, *Public Lands Act*, *Fisheries Act*, and the *Navigable Waters Protection Act* and the regulations thereunder).

- iii) Prior to construction or preparation of a well lease site or a well site access road, the licensee is expected to meet the requirements and guidelines in all current and applicable Alberta Environment informational letters. These currently include
  - *R&R/03-2: Siting an Upstream Oil and Gas Site in an Environmentally Sensitive Area on Private Land – Guidance for Private Land*
  - *R&R/03-3: Revegetation Using Native Plant Materials – Guidelines for Industrial Development Sites*
  - *R&R/03-4: Weeds on Industrial Development Sites – Regulations and Guidelines*
  - *R&R/03-5: Problem Introduced Forages on Prairie and Parkland Reclamation Sites – Guidance for Non-cultivated Land*
  - *R&R/03-6: Sites Reclaimed Using Natural Recovery Methods – Guidance on Site Assessment*
  - *R&R/03-7: Wellsite Construction – Guidelines for No-Strip and Reduced Disturbance*
- c) If native prairie is present, the applicant is expected to follow the principles detailed in ERCB IL 2002-01: *Principles for Minimizing Surface Disturbance in Native Prairie and Parkland Areas*.
- d) If there is intermittent drainage or a spring/artesian flow across the well site or access road, the applicant must maintain natural drainage.
- e) If the proposed well site is within a caribou range, the applicant must follow the requirements and consult the guidelines in ERCB IL 94-22: *Operating Guidelines for Industrial Activity in Caribou Range – North-West Alberta*.

In 1993, the ERCB issued IL 93-09: *Oil and Gas Developments Eastern Slopes (Southern Portion)*, setting guidelines and expectations for oil and gas development in this region.

- 61) If the proposed well site is located within the Eastern Slopes (Southern Portion), the applicant must meet the general expectations described in IL 93-09 by
  - a) preparing development plans beyond the initial exploration stage, taking into consideration current stages such as
    - i) pool delineation (initial),
    - ii) pool delineation (subsequent),
    - iii) pool development, and
  - b) developing environmental assessments, as detailed in IL 93-09.
- 62) The applicant must submit a nonroutine application if it cannot meet the requirements to file a routine well licence application or if it proposes alternative mitigative measures.
  - a) To submit a nonroutine application, the applicant must attach information outlining why the application is nonroutine and the alternative mitigative measures the applicant proposes to have in place to protect the environment.

An ERCB well licence does not relieve the applicant/licensee from meeting the legislative or regulatory requirements of the following:

- *Environmental Protection and Enhancement Act and Regulations*
- Other relevant acts, including provincial and federal legislation and regulation (including the *Water Act*, *Public Lands Act*, *Fisheries Act*, and the *Navigable Waters Protection Act* and the regulations thereunder).

#### 7.11.14 Alberta Culture and Community Spirit

63) For proposed projects on Freehold lands, the applicant must consult Alberta Culture and Community Spirit's *Listing of Significant Historical Sites and Areas* to determine whether a proposed well site will require Alberta *Historical Resources Act* clearance prior to filing a well licence application. This list explains when a *Historical Resources Act* clearance is required and how to obtain a clearance. See also *ERCB IL 82-11: Preservation of Archaeological, Palaeontological, and Historical Resources*

- a) If the proposed well site is to be located on land identified in the list, the applicant must
  - i) obtain *Historical Resources Act* clearance prior to submitting a well licence application, or
  - ii) submit a well licence application as nonroutine if Alberta Culture and Community Spirit has not granted clearance, and include a detailed explanation.

#### 7.11.15 H<sub>2</sub>S Release Rate Assessments

The ERCB requires the applicant to conduct an H<sub>2</sub>S release rate assessment for each Category C, D, or E well to ensure public safety when developing projects containing H<sub>2</sub>S gas. The H<sub>2</sub>S release rate assessment determines the minimum EPZ for the proposed project and dictates the minimum radius for the applicant's personal consultation and notification program.

64) If the producing or completion H<sub>2</sub>S release rate is greater than the drilling release rate, the applicant must fulfill the personal consultation and notification requirements applicable to the higher rate.

Pursuant to Section 12.150(8.1) of the *OGCR*, the ERCB will normally consider interpretative data submitted in support of release rate assessments as confidential, provided that the data are indicated as confidential at the time of filing.

Test data used for H<sub>2</sub>S release rate assessments are available in area summary format or individual well format from ERCB Information Services.

An applicant may file an H<sub>2</sub>S release rate assessment with the ERCB Reserves and Por-Space Management Group prior to submitting a well licence application. The ERCB strongly encourages companies to file "presubmission" H<sub>2</sub>S release rate assessment packages. This presubmission allows the applicant to

- obtain feedback on methodology and H<sub>2</sub>S release rate assessments,

- verify personal consultation and notification radiiuses applicable to the well project, and
- minimize the well licence application processing time.

After reviewing an applicant's presubmission, the ERCB Reserves and Pore-Space Management Group will identify any deficiencies and advise the applicant. The Reserves and Pore-Space Management Group may close and return the presubmission if the H<sub>2</sub>S release rate assessment does not conform to the requirements in *Directive 056*.

65) Prior to filing a well licence application, the applicant must also do the following:

- a) The applicant must prepare an adequate H<sub>2</sub>S release rate assessment that meets the outlined requirements.
- b) The applicant must evaluate all formations up to and included in the 15 m overhole interval and incorporate this information into the H<sub>2</sub>S release rate assessment.
- c) Upon ERCB request, the applicant must provide documentation to demonstrate that the H<sub>2</sub>S release rate assessment was conducted prior to filing the well licence application.
- d) The applicant must include related H<sub>2</sub>S details for a well that may encounter H<sub>2</sub>S gas by using Schedule 4.3. The information given in Schedule 4.3 forms the basis for the applicant's participant involvement program for the proposed well project.

66) Each H<sub>2</sub>S release rate assessment must consist of the following four components, but may include additional components as circumstances warrant. These four components constitute the H<sub>2</sub>S release rate documentation package:

- a) geological well prognosis, with a comprehensive geological discussion (Section 7.11.15.1),
- b) geological mapping (Section 7.11.15.2),
- c) engineering discussion (Section 7.11.15.3), and
- d) tabulated data (Section 7.11.15.4).

A case study is provided in Appendix 7.

67) The applicant must support the H<sub>2</sub>S release rate assessment with the proper documentation, as detailed in this section.

- a) **This information must be available prior to filing a presubmission or well licence application and upon ERCB request. Its immediate availability is crucial in an emergency situation.**

68) The ERCB expects that the documentation package will be prepared under the supervision of a member of the Association of Professional Engineers, Geologists, and Geophysicists of Alberta (APEGGA), or other technical designation.

#### **7.11.15.1 Geological Discussion**

69) The applicant must provide a geological well prognosis and a comprehensive geological discussion to address the hydrocarbon and H<sub>2</sub>S potential of all formations encountered by the well.

There are two basic cases for reviewing H<sub>2</sub>S potential:

- a) shallow wells—wells planned to reach total depth prior to the top of the Mannville Group (or equivalent zone), and
- b) deep wells—wells planned to be drilled deeper than the top of the Mannville Group.

##### ***Shallow Wells***

Reservoirs in shallow horizons may develop very low concentrations of H<sub>2</sub>S gas during their operational life. In these cases, the calculated H<sub>2</sub>S release rate may result in an emergency planning radius that is less than the total radius of the well site lease; however, this needs to be considered with respect to safety of personnel and the public.

70) The applicant must plan for the potential to encounter H<sub>2</sub>S gas if gas analysis data in the public domain demonstrate that a reservoir originally not containing H<sub>2</sub>S gas has evolved to gas containing H<sub>2</sub>S.

##### ***Deep Wells***

These wells have the potential to encounter H<sub>2</sub>S gas horizons throughout the Mannville Group and deeper. However, H<sub>2</sub>S gas zones may be encountered at shallower depths. Reservoirs in shallow zones may develop very low concentrations of H<sub>2</sub>S gas during their operational life; one example is the Cardium Formation.

If a well encounters H<sub>2</sub>S gas in the Mannville Group or deeper, the estimated H<sub>2</sub>S release rate derived from the deeper zones usually overwhelms the small contribution from shallower zone(s). In this case, the contribution from shallower zones need not be considered in the cumulative H<sub>2</sub>S assessment for the proposed well.

- 71) Should the assessment reveal that gas containing H<sub>2</sub>S will not be encountered in formations and/or depths greater than the top of the Mannville Group, the applicant must revisit the well prognosis and provide an H<sub>2</sub>S release rate assessment for any shallow zones that have any concentrations of H<sub>2</sub>S gas.
- 72) Should either proprietary data or data in the public domain on H<sub>2</sub>S gas concentrations indicate that the H<sub>2</sub>S release rate for shallow zones significantly impacts the cumulative H<sub>2</sub>S release rate for the proposed well, the applicant must include this information in the review.

##### ***Geological Considerations***

73) The geological discussion must indicate the basis for the interpretation of the potential to encounter gas containing H<sub>2</sub>S for each horizon (e.g., open-hole log interpretation, cross-sections, or pool isopachs derived from open-hole logs or seismic information, drillstem test (DST) recoveries, production, or any other appropriate information).

- a) The geological review must support the applicant's choice of data used in the H<sub>2</sub>S release rate calculation. The Canadian Association of Petroleum Producers (CAPP) document *H<sub>2</sub>S Release Rate Assessment Guidelines and Audit Form* is one possible reference for the types of calculation adjustments or corrections that may be required.
- 74) The applicant is expected to consider the following examples (or other situations where they apply) of geological interpretations that may affect the H<sub>2</sub>S release rate calculation for the proposed well:
  - a) Wells near potentially productive reservoirs containing H<sub>2</sub>S gas that are located along erosional edges (e.g., the Elkton member) should be evaluated for the potential for a reduced reservoir thickness beyond the limits of seismic resolution and for the potential to encounter productive outliers.
  - b) Different geological environments may lead to different potential reservoir trends. These trends sometimes exhibit a bias in H<sub>2</sub>S concentration and/or AOF rates for wells completed in the different geological environments. This bias should be considered when reviewing data for geologically analogous pools.
    - i) Because of the potential differences in AOF rates and H<sub>2</sub>S concentrations, the applicant should identify and discard data obtained from a Nisku pinnacle reef reservoir in the West Pembina Basin if the target is the Nisku bank facies.
    - ii) H<sub>2</sub>S concentration and AOF rate data for wells in the Foothills area must be segregated by structural trend for evaluation, since the geological analog may be a pool on the same structural trend as the proposed well.
    - iii) If multiple sands within a formation are potentially productive (e.g., Ellerslie #1 and #2 sandstone), the H<sub>2</sub>S release rate must be adjusted to reflect this scenario.
  - c) If offsetting well data or seismic interpretation indicates that a substantially thickened reservoir is potentially present, this information must be used to determine the H<sub>2</sub>S release rate.

#### 7.11.15.2 Geological Mapping

The ERCB recommends that the applicant begin its geological assessment using a three-township by three-range map plot to examine the well penetration data appropriate for each zone that it has identified or will identify on Schedule 4: Well Purpose as its primary and secondary zones that may contain H<sub>2</sub>S gas. The mapped data may assist in the determination of geological trends, the identification of applicable geologically analogous pools, and the estimation of the potential availability of H<sub>2</sub>S concentration and AOF rate data for the geologically analogous area.

The results of this initial review may indicate that the map area should be expanded to identify the geological trend (e.g., reef platform or thrust sheet) or needs to be reduced due to a high well data density capable of providing sufficient data for review (e.g., oil pools with reduced spacing).

75) The applicant must submit geological maps for all formations that it has or will identify on Schedule 4: Well Purpose as its primary and secondary zones that may contain H<sub>2</sub>S gas.

- For other potential H<sub>2</sub>S zones that are not noted on Schedule 4, the ERCB expects the applicant to implement the process outlined in Section 7.11.15.4. Mapping of these zones is not required.

76) The applicant must submit schematic dip-oriented cross-sections for all proposed wells located in the Foothills geological area based on existing well control or seismic information. The schematic cross-section must illustrate the relationship and the structural style of the prospective zones that may contain H<sub>2</sub>S gas.

77) For map presentations relying on net pay or porosity interpretations, the applicant must provide the basis for the interpretation (e.g., gross pay, shale cutoffs, log porosity cutoffs, water saturation cutoffs) where applicable.

78) All map and schematic cross-section presentations must be completed prior to the date of filing a well licence application.

The applicant may choose the map type that best illustrates its geological interpretation. Some examples of appropriate maps types are

- net pay isopach,
- gross pay isopach,
- structure contour,
- show or bubble maps denoting test or production information,
- porous thickness isopach, and
- isochron maps.

79) Maps must show

- township, range, meridian (sections where appropriate),
- map scale,
- geologically analogous area or pool,
- date prepared and company name, and
- existing well control and proposed well location.

The applicant may choose the map annotations that best illustrate its geological interpretation. Map annotations should be applicable to the map type submitted.

Some examples of annotations on a net pay isopach map are

- presence or absence of porosity (e.g., tight, shale),
- fluid content (e.g., water, gas, and/or oil) of the zone,
- absence of the zone otherwise anticipated (e.g., eroded), and
- estimate of net pay/pay:
  - where the zone is productive,

- at the proposed well location, and
- by using contouring at the proposed location.

Some examples of annotations on a structure contour map are

- presence or absence of porosity (e.g., tight, shale),
- fluid content (e.g., water, gas, and/or oil) of the zone,
- absence of the zone otherwise anticipated (e.g., eroded),
- structural elevations and source (e.g., zone top or porosity top), and
- structural contouring.

#### **7.11.15.3 Engineering Discussion**

- 80) The applicant must provide an engineering assessment for each potentially productive zone that may contain H<sub>2</sub>S gas that includes
  - a) constraints that geological interpretation places on data gathering and review,
  - b) corrections to H<sub>2</sub>S concentration data, and
  - c) corrections to AOF rate data.
- 81) Data must be from an analogous geological area or pool. Use of data from an arbitrary search area without consideration of the geological similarity of the pools is appropriate only when
  - a) a review of the geological interpretation reveals that analogous geological pools exist within the search area, or
  - b) no demonstrated pattern or trend can be established and therefore the maximum H<sub>2</sub>S concentration data and AOF rate data should be used.
- 82) The applicant must include a summary of the logic used to determine the release rate for each formation. The summary could be as simple as a statement indicating that the pay, pressure, and deviation for the proposed well and analog well are comparable and, therefore, the highest values have been used; or it could be an in-depth account of the logic used for any data discounting and/or adjustments made.

#### ***Engineering Considerations***

The CAPP document *H<sub>2</sub>S Release Rate Assessment Guidelines* is one reference for many of the engineering formulas required to adjust the H<sub>2</sub>S release rate. This document may also be used as a reference for the types of calculation adjustments or corrections that may be required as a result of the geological interpretation of the potential zones that may contain H<sub>2</sub>S gas encountered by the proposed well (see Section 7.11.15.1).

#### ***Determining Release Rates***

- 83) The applicant must determine three H<sub>2</sub>S release rates:
  - a) drilling release rate,
  - b) completion/servicing release rate, and
  - c) suspended/producing release rate.

84) To determine the cumulative H<sub>2</sub>S release rate for the proposed well, the applicant must consider the development or exploratory nature of each zone that may contain H<sub>2</sub>S gas.

The maximum H<sub>2</sub>S content and the maximum AOF rate are based on the information from the surrounding geological analog pool(s) or area completed in the same or similar zones.

The H<sub>2</sub>S release rate for each potential zone that may contain H<sub>2</sub>S gas is determined by multiplying the maximum H<sub>2</sub>S content and AOF rate as determined by the geological and engineering review of the available data. The paired data points need not be from the same well.

The drilling release rate for each intermediate hole and main hole is the sum of the release rates from each zone that will be open to the wellbore during the drilling operations.

To calculate the release rate for each zone that may be encountered, AOF rate data may be adjusted to reflect the different flow scenarios appropriate for each zone. If preferred, post-stimulation data, without adjustment for tubing or casing friction loss, may be used for all scenarios.

The applicant may calculate the maximum drilling release rate by totalling the unstimulated release rate for each formation. The discounting of flow data due to stimulation is not appropriate. Post-stimulation data may be adjusted to reflect a zero skin.

The completion/servicing release rate for the targeted formation relies on post-stimulation AOF data. These AOF data may be adjusted for the effects of friction loss using the configuration of the casing cemented in the hole.

The suspended/producing release rate also relies on post-stimulation AOF data and may include an adjustment calculation for flow to surface to account for tubing friction loss. The suspended/producing release rate is used to determine the level classification and the minimum distance or setback requirement for the proposed well (see Table 7.5. and ID 97-06). Communication of this minimum setback distance is a key component of the applicant's participant involvement plan for the proposed well (see Section 2).

85) A summary of the engineering review, identifying adjustments, corrections, and discounted data as appropriate, must be included with presubmission materials filed with the ERCB Reserves and Pore-Space Management Group or in the H<sub>2</sub>S release rate assessment package submitted for application or audit purposes to ERCB Facilities Applications or upon ERCB request.

#### ***Release Rate Scenarios***

86) Each proposed well must be evaluated with its unique circumstances in mind. These calculations must be documented and included with an H<sub>2</sub>S release rate presubmission request or upon ERCB request (Section 7.11.15).

The following items reflect common release rate calculation corrections and comments on appropriate methodology. This is not intended to be exhaustive.

- a) H<sub>2</sub>S samples—H<sub>2</sub>S samples must not be discounted simply because the sample point source is listed as “other.” A review of the hard copy of the gas analysis is required to determine if the sample point is reasonable for use. If the review indicates that the sample point is not representative (e.g., it is a second-stage separator sample source for a gas well release rate), it may be discounted and an annotated hard copy of the analysis describing the reason for discounting must be included.
- b) Potential for both gas and oil production—if a formation has potential for both gas and oil production, the applicant must calculate both release rates and use the higher value.
  - i) H<sub>2</sub>S release rates for oil should be calculated using the maximum gas rate from inflow performance relationship (IPR) tests and the maximum H<sub>2</sub>S concentration from solution gas samples.
  - ii) For H<sub>2</sub>S release rates based on analogous oil wells, the oil rate from the IPR test and the gas-oil ratio (GOR) measured during that test should be used to calculate the maximum gas rate for analogous wells. Combining a maximum IPR rate with a maximum GOR that is not from the same test may result in an unreasonable release rate and is therefore not recommended.
- c) Extended AOF data—When both extended and stabilized AOF rates are reported, the extended AOF must be used for release rate purposes. A production rate for a well that is higher than the AOF for the same well is often an indication that the reported AOF might be the stabilized value. In this case, a review of the AOF test is required.
- d) Single-point AOF—if the “n” value used for a single-point AOF test is not 1.0, a calculated AOF assuming an “n” of 1.0 must be used, unless a review is undertaken to determine a more appropriate value. A summary of this review must be included with a presubmission or upon ERCB request.
- e) Potential producing zones—if the estimated potential pay for the primary and secondary zones that the applicant has identified or will identify on Schedule 4: Well Purpose are estimated to be higher than the pay for the analog well(s) used for each zone, the AOF rates must be adjusted for each zone affected.
- f) Multiple sands—if multiple sands within a formation are potentially productive (e.g., Ellerslie #1 and #2 sandstone), the release rate must be adjusted to reflect this scenario. This can be done by multiplying the maximum release rate calculated for a single sand by the number of potential sands or by totalling the pay estimated for each of the sands and adjusting for the pay of the analog well. If significant differences in performances can be documented between sands, a release rate based on individual sands is acceptable.
- g) AOF pressure—if the pressure reported for the AOF from an analog well is lower than the pressure expected at the proposed location, an adjustment of the AOF to the expected pressure is required. Due to the potential impact an adjustment can have on the revised AOF, the viscosity of the gas at each pressure is required to be used in the formula. If a well has multiple AOF tests performed at declining reservoir pressure, only those performed at close to the initial pressure should be used unless some type of stimulation has been performed since the first test(s).

- h) Pool development—In a pool development scenario, it is reasonable to use the existing wells in the pool as analogs. If the proposed well is the second well in the pool, the H<sub>2</sub>S concentration from the first well in the pool may be used; however, because of the variance of AOFs within pools, the flow potential should be estimated from all analogous pools in the area. If the pool is under any type of scheme (e.g., acid gas disposal/injection), the release rate must address the current pool characteristics as required by Schedule 4.3. If the proposed well will penetrate a pressure depleted pool, the AOF may be adjusted to reflect the current expected reservoir pressure.
- i) Commingled pools—Commingled pools present additional complexity when reviewing the release rate. Analogous wells must not be discounted because the pool name indicates it is commingled. In many instances, test data are obtained prior to commingling. Although the pools may have approval for commingling, only a few wells in the pools may actually be commingled. A review of the test data and/or completion data is necessary to determine the actual formation tested and the appropriate data for the formations in question.

#### **7.11.15.4 Tabulated Data**

- 87) The applicant must provide the results of H<sub>2</sub>S concentration and AOF rate reviews in a tabular format.
  - a) The CAPP document *H<sub>2</sub>S Release Rate Assessment Guidelines* provides data table examples. Regardless of the table format used, the basic data elements as described in the CAPP tables must be provided, along with an indication as to whether the AOF rate data are from a single or multipoint test.
- 88) The applicant must select a minimum of five H<sub>2</sub>S gas analyses and five AOF data points that are representative of each potential zone that may contain H<sub>2</sub>S gas. Data points are representative if they are from a geologically analogous area or pool and are not discounted for technical reasons. In situations where multiple data points exist for the same well, only one value is considered representative. If any of the five data points encounter an ERCB-defined pool, the applicant must assess all of the wells within the pool boundary.

If higher values are discounted, the applicant must support the decision in the geological or engineering discussion.

#### **7.11.16 Working Interest Participants**

- 89) The applicant must be a working interest participant to apply for or hold a well licence.

#### **7.11.17 Additional Application Requirements**

- 90) Applicants must review Section 8: Additional Application Requirements and meet all requirements applicable to the proposed location.

## **7.12 Audit Documentation Requirements—Schedule 4**

- 91) When selected for audit review, the licensee must submit the required documents within 14 calendar days of notice of audit or within the time frame as directed by the ERCB.
- 92) From the audit documents, the ERCB must be able to determine that the licensee fulfilled all requirements to ensure regulatory compliance prior to filing the application.
- 93) For all Category E applications, the applicant must submit the applicable audit documentation with the application for review.

The detailed list of audit documents below corresponds to the steps found in Schedule 4.

### **7.12.1 Step 1: Identification**

No documentation required.

### **7.12.2 Step 2: Participant Involvement Requirements**

#### **7.12.2.1 Mapping Requirements**

- 94) The licensee must submit map(s) that illustrate
  - a) the location of the well,
  - b) the location of all parties included in the participant involvement process (e.g., residents, hamlets, subdivision, public facilities),
  - c) the area of investigation used in the personal consultation and notification program, and
  - d) the emergency planning zone (EPZ) (if applicable).

#### **7.12.2.2 Personal Consultation and Notification Requirements**

- 95) The licensee must submit a record of the personal consultation and notification program that was conducted, using a tabular format similar to the Sample Participant Involvement Summary Form (Appendix 4).
- 96) The summary must include
  - a) name of each party (e.g., landowner, occupant, resident) included in the personal consultation and notification program,
  - b) legal land description for each party,
  - c) a description of each party's interest in the land (e.g., Crown disposition holder, landowner, resident, facility operator),
  - d) date and type of contact conducted with each party (e.g., telephone conversation, registered mail, personal meeting),
  - e) date the ERCB brochure, *EnerFAQs No. 7*, *EnerFAQs No. 15*, and *Objecting to an Energy Resource Project* form were distributed if required,
  - f) date the project-specific information package was distributed,

- g) date the required EncrFAQs package was provided, and
- h) date confirmation of nonobjection was obtained if required.

#### **7.12.2.3 Confirmation of Nonobjection**

97) The ERCB does not require that confirmation of nonobjection be in writing; however, documentation must be submitted when available.

Confirmation of nonobjection may consist of one of the following documents, depending on the nature of the proposed development:

- a) Freehold lease agreement (Freehold also includes Federal Lands and Provincial Special Area Board(s) Land)
  - i) The licensee must submit a copy of the agreement, which confirms the parties involved, the date of agreement, and the location of land involved.
- b) Crown disposition (i.e., signed Mineral Surface Lease or Miscellaneous Lease; executed Area Operating Agreement (AOA) or Temporary Field Authorization)
  - i) In the case of an AOA, the licensee must submit copies of the following AOA documents:
    - the title page (including the details of the expiry date, company name and area of operation),
    - the signoff page (including when the agreement was executed), and
    - geographical map and locations list.
  - ii) For all other Crown dispositions, the licensee must submit a copy of the agreement, which confirms the parties involved, the execution of the agreement (signature), the date of the agreement, and the location of the land involved.
- c) Signed document that identifies the details of the proposal (e.g., signatory page from the applicant's information package)

98) If confirmation of nonobjection is verbal, the licensee must document (log) the name of the party providing verbal nonobjection and the date on which verbal nonobjection was obtained.

#### **7.12.2.4 Information Packages**

99) The licensee must submit a copy of the project-specific information package that was distributed to the parties included in the participant involvement program.

It is not necessary to include a copy of the ERCB's documents in the audit submission; however, details of its distribution must be included.

#### **7.12.2.5 Resolved Concerns and Objections**

100) If concerns/objections were received and resolved during the course of the participant involvement program, the licensee must submit

- a record and explanation of any concerns/objections received, and
- documentation confirming the resolution of any concerns/objections.

#### **7.12.2.6 Sour Gas Planning and Proliferation**

101) If there are residents located within the EPZ of the well, the applicant must submit

- the assessment of existing infrastructure required by Section 8.3.2, and
- the updated expanded project-specific information package, as described in Section 8.3.2.

#### **7.12.3 Step 3: Emergency Response Planning**

102) The licensee must keep a copy of the corporate level ERP or, where required, the specific ERP on file. It is not required for inclusion in the audit submission.

- The licensee must include in the audit submission a statement confirming that the applicant has an approved corporate plan and/or that a site-specific plan will be approved prior to commencing operations.

#### **7.12.4 Step 4: Licence Amendment Only**

No documentation required.

#### **7.12.5 Step 5: Well Purpose**

103) For Category B wells, the licensee must submit a representative gas analysis for each prospective horizon in the proposed well.

#### **7.12.6 Step 6: Re-entry/Resumption/Deepening of a Well**

##### **7.12.6.1 You are the licensee of the well**

No documentation required.

##### **7.12.6.2 The well is currently abandoned**

No documentation required.

##### **7.12.6.3 You have the rights to the existing wellbore**

104) The licensee must provide

- documentation that it has obtained the rights to the existing abandoned wellbore from the previous licensee prior to submitting the well licence application, or
- if the minerals have expired and the abandoned wellbore has reverted to the Crown, documentation that it has obtained the rights from the Crown prior to the submitting the well licence application.

#### **7.12.6.4 The casing will meet the minimum casing testing requirements**

105) The licensee must provide

- a) confirmation that sufficient casing was set and cemented in the well for control purposes, and
- b) confirmation that the casing has been pressure tested in accordance with the appropriate section of the minimum casing testing requirements (see Section 7.11.4), and
- c) confirmation and/or documentation that all applicable requirements in Section 7.11.4 have been met for the specific type of well and drilling operation, or
- d) documentation that the well licence application was submitted nonroutinely and a waiver was granted for the required inspection log.

#### **7.12.7 Step 7: Well Detail**

##### **7.12.7.1 Table Information**

The licensee must submit a survey plan. For CBM wells completed above the base of groundwater protection, the survey plan or an additional map must meet the requirements of Appendix 12.

##### **7.12.7.2 Surface Casing Requirements**

106) The licensee must submit

- a) a *Directive 008 Surface Casing Depth Calculation* form, pressure survey, and pressure gradient documentation, including supporting information for the reduction type selected,
- b) documentation confirming that the applicable criteria will be met for deep surface casing or surface casing exemptions, including any supporting information, and
- c) documentation showing the base of groundwater and a description of the method proposed to protect the groundwater.

107) If a surface casing waiver has been granted, the licensee must submit a copy of the approval issued by ERCB Operations that shows the presubmission application was reviewed and found to be acceptable.

##### **7.12.7.3 Directional Survey Requirements**

No documentation required.

#### **7.12.8 Step 8: Well Classification**

108) If a drill cuttings waiver has been granted, the licensee must submit a copy of the approval issued by ERCB Geology and Reserves that shows the presubmission application was reviewed and found to be acceptable.

## **7.12.9 Step 9: Minerals**

### **7.12.9.1 Rights for All Intended Purposes**

109) The licensee must submit

- a) the mineral rights lease number for Crown minerals,
- b) documentation that authorization has been obtained from the mineral rights lessee or owner for water injection or water source wells,
- c) documentation that authorization has been obtained for leased Crown minerals, and
- d) documentation that authorization has been obtained for Freehold minerals.

### **7.12.9.2 Rights for the Complete Drill Spacing Unit**

110) The licensee must submit

- a) the mineral rights lease number for Crown minerals, and
- b) documentation evidencing the rights for Freehold minerals.

## **7.12.10 Step 10: Surface Rights**

Documentation captured in 7.12.2.2 and 7.12.2.3.

### **7.12.11 Step 11: Surface Impact**

#### **7.12.11.1 Water Body Setback Requirements**

111) If the well centre is within 100 m of a water body, the licensee must submit documentation explaining the steps that were or will be taken to ensure that the water body is protected and that all ERCB requirements are met.

If there is potentially a water body on or near the proposed well's lease, the routine well application may be referred to the Nonroutine Section for further investigation. Subsequently, the applicant may need to demonstrate the efforts it has taken to determine the presence of any water body and to delineate the extent of any identified.

112) If a water body will be disturbed by the well activity, the applicant must submit to the ERCB the approval received under the *Water Act* from Alberta Environment.

#### **7.12.11.2 Other Setback Requirements**

113) If the proposed well is located within 100 m from a surface improvement, the licensee must submit documentation confirming that consent from the surface improvement owner was received prior to the submission of the well licence application.

114) If the proposed well is located within 3 km of a working mine or within 400 m of an abandoned mine, the licensee must submit documentation confirming that the requirements of Sections 6.140 to 6.190 of the *OGCR* will be met.

### **7.12.11.3 Environmental Requirements**

115) The licensee must submit documentation outlining the steps that will be taken to ensure the protection of the environment and that all ERCB requirements are met. The licensee must submit all documentation outlined in *IL 93-09*, if applicable. For CBM wells completed above the base of groundwater protection, additional environment audit requirements are listed in Appendix 12.

### **7.12.11.4 Historical Resources Act**

116) If applicable, the licensee must submit documentation showing that it received a clearance from Alberta Culture and Community Spirit prior to submitting a well licence application.

## **7.12.12 Step 12: Working Interest Participants**

No documentation required.

## **7.12.13 Step 13: Operational Disclosure**

No documentation required.

## **7.13 Audit Documentation Requirements—Schedule 4.3**

117) When selected for audit review, the licensee must submit the following documents within 14 calendar days of notice of audit or within the time frame as directed by Facilities Applications.

118) From the audit documentation, Facilities Applications must be able to determine that the applicant has fulfilled application requirements to ensure regulatory compliance prior to filing the application.

The detailed list of audit documents below corresponds to the steps found in Schedule 4.3.

### **7.13.1 Step 1: H<sub>2</sub>S Release Rate and Step 2: Cumulative H<sub>2</sub>S Release Rate**

119) The licensee must submit a map showing the size and location of the search area used to obtain a minimum of 5 representative maximum H<sub>2</sub>S concentrations and maximum AOF gas rates.

120) The licensee must submit an H<sub>2</sub>S release rate documentation package (see Section 7.11.15) that includes

- a geological well prognosis, with a comprehensive geological discussion for all formations/zones,
- geological mapping for all formations that it has identified or will identify on Schedule 4: Well Purpose as its primary and secondary zones that may contain H<sub>2</sub>S gas,
- an engineering discussion for each potentially productive zone that may contain H<sub>2</sub>S gas, and

- d) tabulated data that provide the results of H<sub>2</sub>S concentration and AOF rate reviews.

121) If a presubmission H<sub>2</sub>S release rate assessment was submitted, the licensee must submit a copy of the letter issued by ERCB Reserves and Pore-Space Management that indicates that the presubmission application was reviewed and that sets out the release rate value(s) considered acceptable to the ERCB.

#### **7.13.2 Step 2: Cumulative H<sub>2</sub>S Release Rate**

##### **7.13.2.1 Intermediate Casing**

122) The licensee must submit the depth to which the intermediate casing will be set.

123) If an intermediate casing waiver has been granted, the licensee must submit a copy of the approval issued by ERCB Operations that shows that the prelicensing application was reviewed and found to be acceptable.

##### **7.13.2.2 Maximum H<sub>2</sub>S Concentration in Well**

No documentation required (covered in Section 7.13.1).

##### **7.13.2.3 Anticipated Suspended/Producing Level as per ID 97-06**

No documentation required (covered in Section 7.13.1).

#### **7.13.3 Step 3: Emergency Planning Zone**

No documentation required.

#### **7.13.4 Step 4: Critical Well Only**

##### **7.13.4.1 Drilling Critical Wells**

124) The applicant must submit a complete and detailed drilling plan based on the requirements in ID 97-06, Directive 036, and IRP Volume 1. The drilling plan must include a detailed table of contents.

125) The applicant must submit a copy of any applicable waiver approvals obtained from ERCB Operations prior to filing an application, if applicable.

Table 7.6 provides a summary of the documents required for audit submission. Refer to the sections cited for full details. The ERCB reserves the right to request the submission of information not listed below if it would assist in the review of an application. If a nonroutine application is proceeding to a hearing, the ERCB may require that the applicant submit the entire audit package for review.

**Table 7.6. Well application audit checklist**

Section No.	Y	N	N/A	Audit documents
<b>7.12.2 Step 2: Participant Involvement Requirements</b>				
<b>7.12.2.1 Participant Involvement Map Requirements</b>				Map
<b>7.12.2.2 Personal Consultation and Notification Requirements</b>				Participant Involvement Summary
<b>7.12.2.3 Confirmation of Nonobjection</b>				
				Freehold lease agreement
				Crown disposition
				Signed information document
				Documented verbal nonobjection
				Written agreement to proceed to Surface Rights Board
<b>7.12.2.4 Information Packages</b>				
				Applicant's project-specific information package
				List of all documents provided to participants
				Documented refusal of information packages
<b>7.12.2.5 Resolved Concerns and Objections</b>				
				A record and explanation of any concerns/objections received that were resolved
				Documentation demonstrating resolution of the concerns/objections received
<b>7.12.2.6 Sour Gas Planning and Proliferation</b>				
				For cases where there are residents located within the EPZ of the facility, the applicant must submit the assessment of existing infrastructure required by Section 8.3.2
				The additional project-specific information package details identified in Section 8.3.2
<b>7.12.3 Step 3: Emergency Response Planning</b>				
				Statement confirming that a corporate plan exists or a site-specific plan will be approved prior to operation
<b>7.12.5 Step 5: Well Purpose</b>				
				For Category B wells, a representative gas analysis for each prospective horizon
<b>7.12.6 Step 6: Re-entry/Resumption/Deepening of a Well</b>				
<b>7.12.6.3 Question 3: You have the rights to the existing wellbore</b>				
				Documentation to confirm that the rights to the existing wellbore have been acquired

Section No.	Y	N	N/A	Audit documents
<b>7.12.6.4 Question 4: The casing will meet the minimum casing testing requirements</b>				
				Confirmation and/or documentation that all applicable minimum requirements in Section 7.11.4 have been met
				A copy of the inspection log waiver if one has been granted
<b>7.12.7 Step 7: Well Detail</b>				
<b>7.12.7.1 Table Information</b>				
				Survey plan
				For CBM wells completed above the base of groundwater protection, survey plan or map that meets the requirements of Appendix 12
<b>7.12.7.2 Question 1: Surface casing requirements</b>				
				Completed <i>Directive 008 Surface Casing Depth Calculation form</i> , pressure survey, and gradient documentation
				Supporting information for the surface casing reduction type selected
				Supporting information confirming that the applicable criteria will be met for Deep surface casing or surface casing exemptions
				Documentation showing the base of groundwater from DDS
				Description of the method proposed to protect the groundwater
				Copy of waiver granted by ERCB Operations
<b>7.12.7.3 Question 2: Directional Survey Requirements</b>				
				No documentation required
<b>7.12.8 Step 8: Well Classification</b>				
				Copy of drill cutting waiver granted by ERCB Geology and Reserves
<b>7.12.9 Step 9: Minerals</b>				
<b>7.12.9.1 Question 1: Rights for all intended purposes</b>				
				Mineral rights lease number (Crown minerals)
				Documentation that authorization has been obtained from the mineral rights owner or lessee for injection or water source wells
				Documentation that authorization has been obtained for leased Crown minerals
				Documentation that authorization has been obtained for Freehold minerals
<b>7.12.9.2 Question 2: Rights for the complete drill spacing unit</b>				
				Mineral rights lease number(s) for leases covering the entire DSU (Crown minerals)
				Documentation that demonstrates Freehold minerals have been acquired for the entire DSU
<b>7.12.11 Step 11: Surface Impact</b>				
<b>7.12.11.1 Question 1: Water body setback requirements</b>				
				Documentation outlining the steps that will be taken to ensure that the water body is protected and that all ERCB requirements are met
				Alberta Environment <i>Water Act</i> approval

(continued)

Table 7.6. Well application audit checklist (concluded)

Section No.	Y	N	N/A	Audit documents
<b>7.12.11.2 Question 1a: Other setback requirements</b>				
				Documentation confirming that consent from the surface improvement owner was received prior to application
				Supporting information confirming that the applicable criteria will be met for coal mines
<b>7.12.11.3 Question 2: Environmental requirements</b>				
				Documentation outlining steps that will be taken to ensure the protection of the environment and that all ERCB requirements are met. All documentation outlined in IL 93-09, if applicable. For CBM wells completed above the base of groundwater protection, the additional audit documents indicated in Appendix 12
<b>7.12.11.4 Question 3 and 3a: <i>Historical Resources Act</i> (Freehold land only)</b>				
				Alberta Culture and Community Spirit approval dated prior to application
<b>7.13 Schedule 4.3</b>				
<b>7.13.1 Steps 1 and 2: H<sub>2</sub>S Release Rate</b>				
				Map showing size and location of the search area
				A geological well prognosis and comprehensive geological discussion for all formations/zones
				Geological mapping for primary and secondary targets that may contain H <sub>2</sub> S gas
				An engineering discussion for each potentially productive zone that may contain H <sub>2</sub> S gas
				Tabulated data that provides the results of H <sub>2</sub> S concentration and AOF rate reviews
				If an H <sub>2</sub> S release rate assessment presubmission was made, a letter issued by ERCB Geology and Reserves
<b>7.13.2 Step 2: Cumulative H<sub>2</sub>S Release Rate</b>				
<b>7.13.2.1 Question 1: Intermediate Casing</b>				
				Depth to which intermediate casing will be set
				Copy of casing waiver (if applicable)
<b>7.13.4 Step 4: Critical Well</b>				
<b>7.13.4.1 Question 1: Drilling Critical Wells</b>				
				A detailed drilling plan based on the requirements in ID 97-06, Directive 036, and IRP Volume 1, including a table of contents
				Waiver/approval obtained from EUB Operations

Table 7.7 provides a summary of documents required for nonroutine application submission by step and question. Please refer to the questions specified in Section 7.14 for full details.

**Table 7.7. Well application nonroutine checklist**

Question No.	Y	N	N/A	Nonroutine Submission Documents
<b>Step 2: Participant Involvement Requirements</b>				
<b>Question 1: Personal consultation, confirmation of nonobjection, and notification requirements have been met</b>				
				The participant involvement summary of all personal consultation and notification that have been completed
				Name, address, telephone number, and legal land description of participants for which personal consultation and notification requirements have not been completed
				Detailed explanation of why all personal consultation and nonobjection requirements cannot be completed
				Detailed explanation of why all notification requirements cannot be completed
				An explanation of how you would like the ERCB to proceed with your application
<b>Question 2: There are outstanding objection/concerns related to this application</b>				
				Name, address, telephone number, and legal land description of all participant(s) with outstanding concerns/objections
				Approximate distance from the project to the land and residence, if applicable, of participant(s) with outstanding concerns/objections.
				Copy of the written concern/objection (or summary of issues if not available)
				A chronology of the participant involvement program conducted with the party
				A discussion of steps taken to mitigate the outstanding concerns/objections
				Copy of the applicant's project-specific information package
				List of other documents distributed
				Documentation in support of the Battle Lake application requirements (Section 8)
				Explanation of how you would like the ERCB to proceed with your application
				If there are residents within the EPZ, you must also attach <ul style="list-style-type: none"> <li>• the assessment of existing infrastructure required by Section 8.3.2</li> <li>• the updated expanded project-specific information package, as described in Section 8.3.2</li> <li>• a copy of an area plan as described in Section 8.3.3 if it was completed</li> </ul>
<b>Step 6: Reentry/Resumption/Deepening of a Well</b>				
<b>Question 3: The applicant has the rights to the existing wellbore</b>				
				Detailed explanation as to why you do not have the rights to the existing wellbore
<b>Question 4: Casing will meet the minimum casing testing requirements</b>				
				Detailed explanation and confirmation with regard to items 33(a) through (i) in Section 7.11.4
<b>Step 7: Well Detail</b>				
<b>Question 1: Surface casing meets the requirements of Directive 008</b>				
				Detailed explanation, including a copy of surface casing approval/waiver (if already issued)
				Geological data

(continued)

**Table 7.7. Well application nonroutine checklist (concluded)**

Question No.	Y	N	N/A	Nonroutine Submission Documents
				Operations data within 3 km
				Area map
<b>Question 2: A direction survey will be run if the well deviates from vertical</b>				
				Explanation of why a directional survey will not be run when well deviates from vertical
<b>Step 8: Well Classification</b>				
<b>Question 1a: If YES, drill cutting samples will be collected and submitted as required</b>				
				Copy of drill cuttings approval/waiver (if available)
				Lahee classification
				Well location, terminating formation, and total depth
				List of control wells with sample coverage over producing interval
				Detailed reason for a waiver
<b>Step 9: Minerals</b>				
<b>Question 1: The applicant has the rights for all intended purposes of the proposed well</b>				
				Detailed explanation of why mineral rights have not been obtained
<b>Question 2: The applicant has the rights to a complete drilling spacing unit</b>				
				Detailed explanation of why mineral rights have not been obtained for the entire drilling spacing unit
<b>Step 11: Surface Impact</b>				
<b>Question 1: The ERCB water body setback requirements have been met</b>				
				Detailed explanation of why water body setback requirements cannot be met
				Description of methods to protect the water body
<b>Question 1a: All other ERCB setback requirements have been met</b>				
				Detailed explanation and, if required, consent of the surface improvement owner and/or the approval from the Freehold lessee/owner
				Landowner confirmation of nonobjection with regard to setbacks
<b>Question 2: The proposed well site and/or access road will meet ERCB environmental requirements</b>				
				Detailed explanation as to why environmental requirements cannot be met
				Explanation of the mitigative measures to be in place during drilling and production operations to protect the environment
<b>Question 3a: If YES, clearance has been granted for the well site (Freehold land only)</b>				
				Detailed explanation as to why Alberta Culture and Community Spirit has not provided clearance

DAY	MONTH	YEAR	ERCB APPLICATION NUMBER	APPLICANT'S REFERENCE
-----	-------	------	-------------------------	-----------------------

### 1. IDENTIFICATION

Company Name \_\_\_\_\_ Applicant BA Code \_\_\_\_\_  
 Purpose of Application:  New  Re-entry/Resumption  Deepening  Licence Amendment

### 2. PARTICIPANT INVOLVEMENT REQUIREMENTS

1. Personal consultation, confirmation of nonobjection, and notification requirements have been met: Public ..... YES  NO   
 2. There are outstanding objections/concerns related to this application ..... YES  NO   
 3. Distance to nearest surface development \_\_\_\_\_ km

### 3. EMERGENCY RESPONSE PLANNING

1. The applicant will meet ERCB requirements for emergency response planning ..... YES

### 4. LICENCE AMENDMENT ONLY

Check all that apply:  Surface Location  Ground Elevation  Mineral Rights  
 Surface Coordinates  Total Depth  Surface Rights  
 Bottomhole Location  Terminating Formation  Schedule 4.3

Change of purpose:  Regulation Section  Well Type Original Licence Number W \_\_\_\_\_

### 5. WELL PURPOSE

Category Type \_\_\_\_\_

Regulation Section  Section 2.020  Section 2.030  Section 2.040

WELL TYPE	SUBSTANCE NAME	FORMATION CODE	FORMATION NAME

1. The proposed well is part of an experimental, primary or commercial crude bitumen scheme ..... YES  NO

If YES, Scheme Approval Number \_\_\_\_\_ Expiry Date (experimental schemes only) \_\_\_\_\_ (DAY/MONTH/YEAR)

### 6. RE-ENTRY/RESUMPTION/DEEPENING OF A WELL

Original Licence Number W \_\_\_\_\_

1. The applicant is the licensee of the well ..... YES  NO   
 2. The well is currently abandoned ..... YES  NO   
 3. The applicant has the rights to the existing wellbore ..... YES  NO   
 4. Casing will meet the minimum casing testing requirements ..... YES  NO

If you check a BOLD response, you must attach supporting information.

(Schedule 4 continued on next page)

**7. WELL DETAIL**

If you are filing a multiwell pad application, attach a completed Schedule 4.2.

Bottomhole Location	Type of Drilling Operation	Surface Location	Surface Coordinates			
			N/S Distance	N/S Designation	E/W Distance	E/W Designation
LSD SEC TWP RGE W_M		LSD SEC TWP RGE W_M				
Well Name:						
Surface Casing Depth (m)	Projected Total Depth (m)	True Vertical Depth (m)	Ground Elevation (m)	Mineral Rights		
Terminating Code	Terminating Formation Name		Surface Latitude (NAD 83)	Surface Longitude (NAD 83)		

1. Surface casing meets the requirements of *Directive 008* ..... YES  NO  N/A   
 2. A directional survey will be run if the well deviates from vertical ..... YES  NO

**8. WELL CLASSIFICATION**

If Lahee classification is "Deeper Pool Test," well will be exploratory below.

Lahee Classification

Code	Formation Name	Depth (m)

If status is "Confidential Below," well will be confidential below.

Confidential Status

Code	Formation Name

1. Drill cutting samples are required to be taken ..... YES  NO   
 1a. If YES, drill cutting samples will be collected and submitted as required ..... YES  NO   
 1b. If required to be collected and submitted, drill cutting samples will be provided as follows:

Code	From Formation Name/Casing	Depth (m)

Code	To Formation Name/Casing	Depth (m)

**9. MINERAL RIGHTS**

1. The applicant has the rights for all intended purposes of the proposed well ..... YES  NO   
 2. The applicant has the rights to a complete drilling spacing unit ..... YES  NO

**10. SURFACE RIGHTS**

1. The surface owner is  Alberta Crown  Freehold

**11. SURFACE IMPACT**

1. The ERCB water body setback requirements have been met ..... YES  NO   
 1a. All other ERCB setback requirements have been met ..... YES  NO   
 2. The proposed well site and/or access road will meet the ERCB environmental requirements ..... YES  NO   
 3. The proposed well site requires *Historical Resources Act* clearance (Freehold land only) ..... YES  NO   
 3a. If YES, clearance has been granted for the well site (Freehold land only) ..... YES  NO

**12. WORKING INTEREST PARTICIPANTS**

1. The licensee is the only working participant. If NO, attach a completed Schedule 4.1 ..... YES  NO

**13. OPERATIONAL DISCLOSURE**

1. Underbalanced drilling operations will be conducted ..... YES  NO   
 2. The well will encounter reservoirs that will be subject to enhanced recovery or acid gas injection schemes, or CO<sub>2</sub> greater than 1 per cent in the producing formation ..... YES  NO

## 7.14 How to Complete Well Licence Application Schedules

### 7.14.1 How to Complete Schedule 4: Well Licence Application

**Date** Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).

**Applicant's Reference** Enter your own file reference in the designated area (optional).

#### Step 1: Identification

<b>Company Name</b>	Enter the full corporate name of the applicant.
<b>Applicant BA Code</b>	Enter the 4-digit business associate (BA) code issued to your company by the ERCB.
<b>Purpose of Application</b>	Select the appropriate box to indicate whether this application is for a new single well, a re-entry/resumption, a deepening, or an amendment of an existing well licence.  If your application is for a multiwell pad location or a scheme of observation wells, you must complete and submit Schedule 4.2 with your application.  If your application is for a Category C, D, or E well or multiwell pad, you must complete and submit Schedule 4.3 with your well licence application.  To change an oil sands evaluation well (within 30 days of drilling) to a conventional producing well, select the Licence Amendment option; see Step 5: Well Purpose—Regulation Section.
<b>New</b>	Select this box if you are applying for a new well.
<b>Re-entry/Resumption</b>	Select this box if you are not the current licensee of record and are applying to re-enter a well or you are the licensee of the well and plan to resume drilling after original rig release. See Step 6: Re-Entry/Resumption/Deepening of a Well.
<b>Deepening</b>	Select this box if you are applying to deepen a well while the rig is on hole, resulting in an increase in the well category (e.g., from B to C, or C to D; see Table 7.1). For other deepenings, also see Step 6: Re-Entry/Resumption/Deepening of a Well.
<b>Licence Amendment</b>	Select this box if you are amending a previously issued well licence prior to spud or rig release. See Step 4: Licence Amendment Only.

#### Step 2: Participant Involvement Requirements

*If you check a **BOLD** response, you must attach supporting information.*

**1. Personal consultation, confirmation of nonobjection, and notification requirements have been met: Public**

**YES** means all applicable requirements as outlined in Table 7.1 and the participant involvement requirements of Sections 2 and 7.8 and in II, 82-11 have been met prior to application submission.

**NO** means that due to exceptional circumstances, all applicable requirements as cited above have not been met. This includes being unable to contact a party or receive confirmation of nonobjection, as required.

**If NO**, you must attach

- the participant involvement summary of all personal consultation and notification that has been completed;
- the name, address, telephone number, and legal land description of participants for which personal consultation and notification requirements have not been completed;
- a detailed explanation of why all personal consultation and nonobjection requirements cannot be completed;
- a detailed explanation of why all notification requirements cannot be completed;
- an explanation of how you would like the ERCB to proceed with this application.

The ERCB will review the circumstances and decide if an exemption is warranted.

**2. There are outstanding concerns/objections related to this application.**

**YES** means there are outstanding concerns and/or objections.

**If YES**, you must attach

- the name, address, telephone number, and legal land description of the party with outstanding concerns/objections;
- approximate distance from the project to the land and residence, if applicable, of the participant(s) with outstanding concerns/objections;
- a copy of written concerns/objections received, if available;
- a chronology of the participant involvement program conducted with the party;
- a discussion of steps taken to mitigate the outstanding concerns/objections;
- a copy of the project-specific information package provided;
- a list of other documents distributed; and
- an explanation of how you would like the ERCB to proceed with your application.

**If there are residents within the EPZ**, you must also attach

- the assessment of existing infrastructure required by Section 8.3.2;
- the updated expanded project-specific information package, as described in Section 8.3.2; and
- a copy of an area plan, as described in Section 8.3.3, if it was completed.

**YES** also means the proposed well is located within the Tier 1 area of Battle Lake and the documentation required by Section 8.2 is attached.

The ERCB will review the circumstances and decide if an exemption is warranted.

**NO** means there are no outstanding concerns/objections.

<b>3. Distance to nearest surface development</b>	Enter the distance from the well centre to the nearest surface development in kilometres (km) to 2 decimal places.
	If there is no surface development within the EPZ, a distance to the nearest town, village, or urban centre may be used. Where there is no EPZ, a search should be done to at least 1.5 km; if there is no surface development within this distance, enter 1.5 km on the schedule.

#### **Step 3: Emergency Response Planning**

---

<b>1. The applicant will meet ERCB requirements for emergency response planning.</b>	YES means the corporate or specific emergency response plan will meet the requirements of <i>Directive 071</i> .
--	--

#### **Step 4: Licence Amendment Only**

---

*Refer to Step 6 if you are resuming drilling operations after rig release, re-entering an abandoned well, or deepening a well while on hole, which results in a change in category type (e.g., B140 to C280).*

The following provides further clarification.

##### **Before construction or spud date:**

- If the category type is changing before the well is spudded, request that the ERCB cancel the original licence and reapply for a new well licence. Note that applicant's consultation/notification must be completed for a new category type.
- Any other revisions to the licence may be done by completing a licence amendment application and completing this step.

##### **While on hole:**

When you are applying for a deepening of the well greater than 150 m or any deepening resulting in a change to the terminating formation and there are no changes to the category type, file a licence amendment application and complete this step.

<b>Check all that apply</b>	Check all the boxes that apply to your well licence amendment application.
<b>Surface Location</b>	Check this box to indicate a change in surface location of the well within the same drilling spacing unit. Enter the new surface location, surface location coordinates, surface latitude, and surface longitude in Step 7: Well Detail.  You must submit a revised survey plan with your amendment application.
<b>Surface Coordinates</b>	Check this box to indicate a change in the surface coordinates of the well. Enter the new surface coordinates, latitude, and longitude in Step 7: Well Detail.  You must submit a revised survey plan with your amendment application.
<b>Bottomhole Location</b>	Check this box to indicate a change in bottomhole location of the well. Enter the new bottomhole location in Step 7: Well Detail.  You must submit a revised survey plan with your amendment application.

<b>Ground Elevation</b>	Check this box to indicate a change in ground elevation. Enter the new ground elevation for the well in Step 7: Well Detail.
<b>Total Depth</b>	You must submit a revised survey plan with your amendment application.
<b>Terminating Formation</b>	Check this box to indicate an increase in total depth for the well. Enter the new projected total depth in Step 7: Well Detail. If the well is not a vertical well, also enter the projected true vertical depth.
<b>Mineral Rights</b>	Check this box to indicate a change in terminating formation for the well. Enter the new terminating formation in Step 7: Well Detail. You must also identify that you have the mineral rights to the new terminating formation in Step 9: Mineral Rights.
<b>Surface Rights</b>	Check this box to indicate a change to the mineral ownership record for the well.
<b>Schedule 4.3</b>	Enter the identity of the mineral rights owner (head lessor) in Step 7: Well Detail.
<b>Change of Purpose</b>	Check this box to indicate a change to the Crown or Freehold surface ownership and enter the surface right owner for the well in Step 10: Surface Rights.
<b>Regulation Section</b>	Check the box to indicate a change to data initially recorded on Schedule 4.3.
<b>Well Type</b>	Check the appropriate box to indicate a change of purpose for the well.
<b>Original Licence Number</b>	Enter the new well purpose in Step 5: Well Purpose.  You must change an Oil Sands Evaluation well within 30 days from the drilling of the well licence. This also requires a regulation change in Step 5: Well Purpose.
<b>Step 5: Well Purpose</b>	
<b>Category Type</b>	Enter the category type of the well from Table 7.1. If you have selected a Category C, D, or E well, you must complete and attach Schedule 4.3 to your application.  For Category E wells, you must submit a nonroutine well licence application and all applicable audit documentation.

<b>Regulation Section</b>	Using Table 7.8, check the appropriate box to indicate the section of the <i>OGCR</i> that this application is being submitted under.
<b>Section 2.020</b>	Select this box if you are submitting the well licence application under Section 2.020 of the <i>OGCR</i> for a conventional well (see Table 7.8).
<b>Section 2.030</b>	Select this box if you are submitting the well licence application under Section 2.030 of the <i>OGCR</i> for an oil sands evaluation well, test hole, or an experimental well (see Table 7.8).
<b>Section 2.040</b>	Select this box if you are submitting the well licence application under Section 2.040 of the <i>OGCR</i> for a well that will be drilled greater than 150 m to supply water for any purpose (see Table 7.8).
<b>Well Type</b>	Enter the name for the well type from Table 7.8.
<b>Substance Name</b>	Enter the substance name from Table 7.8. Enter “none” if there is no substance involved.
<b>Formation Code</b>	Enter the formation code. Formation codes are available on the ERCB Web site <a href="http://www.ercb.ca">www.ercb.ca</a> under Industry Zone : Rules, Regulations, Requirements : Reference Codes.
<b>Formation Name</b>	Enter the corresponding formation name. Formation names are available on the ERCB Web site <a href="http://www.ercb.ca">www.ercb.ca</a> under Industry Zone : Rules, Regulations, Requirements : Reference Codes.
<b>1. The proposed well is part of an experimental, primary, or commercial crude bitumen scheme.</b>	YES means the proposed well is part of an approved experimental, primary, or commercial crude bitumen scheme. NO means the proposed well is not part of an approved experimental, primary, or commercial crude bitumen scheme.
<b>If YES, Scheme Approval Number</b>	If the proposed well is part of an approved scheme, enter the Scheme Approval Number.
<b>Expiry Date (experimental schemes only)</b>	If the proposed well is part of an approved scheme, enter the expiry date (e.g., 15 Jan 2011).

#### Step 6: Re-Entry/Resumption/Deepening of a Well

*Complete this step only if you are resuming drilling operations after rig release, re-entering an abandoned well, or deepening a well while on hole, which results in a change in category type (e.g., B140 to C280).*

*The following provides further clarification.*

##### **While on hole:**

- When you are applying for a deepening of the well and there is a change to the category type, file a deepening application and complete this step.
- For any other deepening greater than 150m where the category type does not change, you must file a licence amendment application and complete Step 4.

##### **After rig release or re-entry of an abandoned well:**

- File an application for a re-entry/resumption and complete this step.

<b>Original Licence Number</b>	Enter the previously issued 7-digit well licence number.
<b>1. The applicant is the licensee of the well.</b>	<b>YES</b> means you are the current licensee of the well. <b>NO</b> means you are not the current licensee of the well.
<b>2. The well is currently abandoned.</b>	<b>YES</b> means the well is currently abandoned according to ERCB records. <b>NO</b> means the well is not abandoned according to ERCB records.
<b>3. The applicant has the rights to the existing wellbore.</b>	<b>YES</b> means you have the rights to the existing wellbore. <b>NO</b> means you do not have the rights to the existing wellbore. If <b>NO</b> , you must attach a detailed explanation as to why you do not have the wellbore rights. The ERCB will review the circumstances and decide if an exemption is warranted.
<b>4. Casing will be pressure tested to meet the minimum requirements.</b> (Section 7.11.4)	<b>YES</b> means that prior to commencing re-entry or resumption of drilling operations, the casing will be tested to ensure that it meets the minimum requirements as described for the category and type of well. <b>NO</b> means the existing casing will be pressure tested to meet the minimum requirements and a casing inspection log waiver is being requested. If <b>NO</b> , you must attach a detailed explanation and provide confirmation with regard to items 32(a) through (i) in Section 7.10.4. The ERCB will review the circumstances and decide if an exemption is warranted.

#### **Step 7: Well Detail**

*If you are filing a multiwell pad application, attach a completed Schedule 4.2.*

*If you check a **BOLD** response, you must attach supporting information.*

<b>Bottomhole Location</b>	Enter the bottomhole location of the wellbore using the Dominion Land Survey System.
<b>Type of Drilling Operation</b>	Enter the type of drilling operation being conducted (i.e., vertical, directional, horizontal, slant, or natural drift).
<b>Surface Location</b>	Enter the surface location of the wellbore as surveyed using the Dominion Land Survey System.
<b>Surface Coordinates</b>	
<b>N/S Distance</b>	Enter the north/south coordinates for the surface location measured from the well to the outside boundaries of the section containing the well and rounded to the nearest 0.1 m.
<b>N/S Designation</b>	Enter "N" or "S", as appropriate, to designate the direction of measurement from the well to the section boundary.
<b>E/W Distance</b>	Enter the east/west coordinates for the surface location measured from the well to the outside boundaries of the section containing the well and rounded to the nearest 0.1 m.

<b>E/W Designation</b>	Enter “E” or “W”, as appropriate, to designate the direction of measurement from the well to section boundary.
<b>Well Name</b>	Well names are created by EAS to be consistent with <i>OGCR</i> Section 13.020. Applicants should not change the well name created by EAS and only indicate or add the optional particulars required to distinguish the proposed well to a maximum of 36 characters.
<b>Surface Casing Depth</b>	Enter the total depth of the surface casing to the nearest metre.
<b>Projected Total Depth</b>	Enter the projected total depth to the nearest metre.  This depth must include the 15 m overhole interval.
<b>True Vertical Depth</b>	Enter the true vertical depth to the nearest metre if the well is expected to deviate from vertical.  This depth must include the 15 m overhole interval.
<b>Ground Elevation</b>	Enter the surveyed ground elevation rounded to the nearest 0.1 m.
<b>Mineral Rights</b>	Enter “Alberta Crown,” “Freehold,” or “Both,” as appropriate. For the purpose of the application, the ERCB considers “Federal Crown” minerals as “Freehold”.
<b>Terminating Code</b>	Enter the code of the deepest formation in which the well will terminate and where you are entitled to the right to produce (see the ERCB Web site under <b>Industry Zone : Rules, Regulations, Requirements : Reference Codes</b> ).
<b>Terminating Formation Name (Section 7.11.5)</b>	Enter the name of the deepest formation in which the well will terminate and where you are entitled to the right to produce (see the ERCB Web site under <b>Industry Zone : Rules, Regulations, Requirements : Reference Codes</b> ).  Do not record any formation within the 15 m overhole interval as the terminating formation unless you hold the mineral rights to it.
<b>Surface Latitude</b>	Enter the latitude in decimals of degrees to 6 decimal places based on the North American Datum 1983 (NAD 83) for the surface location of the well.
<b>Surface Longitude</b>	Enter the longitude in decimals of degrees to 6 decimal places based on NAD 83 for the surface location of the well.
<b>1. Surface casing meets the requirements of <i>Directive 008</i>. (Section 7.11.10)</b>	<b>YES</b> means the proposed surface casing meets the requirements of <i>Directive 008</i> .  <b>NO</b> means either the proposed surface casing will not meet the requirements of <i>Directive 008</i> or a waiver has been issued by the ERCB Operations Group.  If <b>NO</b> , you must attach a copy of the waiver approval issued by the ERCB Operations Group or provide a detailed explanation as to why the <i>Directive 008</i> requirements will not be met, including geological data, operations data, and an area map. The ERCB will review the circumstances and decide if an exemption is warranted.

**N/A** means there is no *Directive 008* requirement (e.g., the well licence application is to re-enter an existing wellbore).

**2. A directional survey will be run if the well deviates from vertical.**

**YES** means a directional survey will be run if the well deviates from vertical.

**NO** means a directional survey will not be run if the well deviates from vertical.

If **NO**, you must attach a detailed explanation. The ERCB will review the circumstances and decide if an exemption is warranted.

**Step 8: Well Classification**

**Lahee Classification**  
(Section 7.11.6)

Enter the appropriate Lahee classification for the proposed well, using Table 7.9.

**If Lahee classification is "Deeper Pool Test," well will be exploratory below:**

**Code**

Enter the code of the formation below which the proposed well will be exploratory. Formation codes are available on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Rules, Regulations, Requirements : Reference Codes.

**Formation Name**

Enter the name of the formation below which the proposed well will be exploratory. Formation names are available on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Rules, Regulations, Requirements : Reference Codes.

**Depth**

Enter the projected depth of the base of the formation below which the proposed well will be exploratory to the nearest metre.

**Confidential Status**  
(Section 7.11.7)

Enter the confidential status of the proposed well, using Table 7.10.

**If status is "Confidential Below," well will be confidential below:**

**Code**

Enter the code of the formation below which the proposed well will be confidential. Formation codes are available on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Rules, Regulations, Requirements : Reference Codes.

**Formation Name**

Enter the name of the formation below which the proposed well will be confidential. Formation names are available on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Industry Zone : Rules, Regulations, Requirements : Reference Codes.

**1. Drill cutting samples are required to be taken.**  
(Section 7.11.8)

**YES**, means drill cutting samples are required to be taken, as outlined in Section 7.11.8 and OGCR Section 11.010.

**NO** means drill cutting samples are not required to be taken.

**1a. If YES, drill cutting samples will be collected and submitted as required.**

**YES** means drill cutting samples will be collected and submitted as required.

**NO** means drill cutting samples will not be collected and submitted as required.

If **NO**, you must attach a detailed explanation that includes

- Lahee classification,
- well location,
- terminating formation,
- total depth of well,
- a list of control wells with sample coverage over the producing interval, and
- the reason for a drill cuttings sample waiver.

The ERCB will review the circumstances and decide if an exemption is warranted.

**1b. If required to be collected and submitted, drill cutting samples will be provided as follows:**

<b>Code</b>	Enter the code of the formation or the casing type 30 m above which submission of drill cutting samples begins. Formation codes are available on the ERCB Web site <a href="http://www.creb.ca">www.creb.ca</a> under Industry Zone : Rules, Regulations, Requirements : Reference Codes.
<b>From Formation Name/Casing</b>	Enter the name of the formation or the casing depth 30 m above which submission of drill cutting samples begins. Formation names are available on the ERCB Web site <a href="http://www.creb.ca">www.creb.ca</a> under Industry Zone : Rules, Regulations, Requirements : Reference Codes.
<b>Depth</b>	Enter the proposed depth to the nearest metre at which drill cutting sample collection submission begins.
<b>Code</b>	Enter the code of the formation 30 m below which sample collection and submission ends, or enter total depth, if that is where sample collection ends. Formation codes are available on the ERCB Web site <a href="http://www.creb.ca">www.creb.ca</a> under Industry Zone : Rules, Regulations, Requirements : Reference Codes.
<b>To Formation Name/Casing</b>	Enter the name of the formation or the casing depth 30 m below which sample collection and submission ends, or enter total depth, if that is where sample collection ends. Formation names are available on the ERCB Web site <a href="http://www.creb.ca">www.creb.ca</a> under Industry Zone : Rules, Regulations, Requirements : Reference Codes.
<b>Depth</b>	Enter the proposed depth to the nearest metre where drill cutting sample collection and submission end.

### **Step 9: Mineral Rights**

---

*If you check a **BOLD** response, you must attach supporting information.*

**1. The applicant has the rights for all intended purposes of the proposed well.**  
(Section 7.11.11)

YES means you have acquired the right to produce from the intended formation(s) or the right to drill and operate the well, as stated in the well purpose for the complete drilling spacing unit and as required for Freehold lands by the Alberta Department of Energy (DOE) *Mines and Mineral Act*, Sections 53 and 54, and DOE *Informational Letter (IL) 92-09* and *IL 94-21* for Crown minerals.

**NO** means that due to exceptional circumstances, all applicable requirements as cited above have not been met.

If **NO**, you must attach a detailed explanation of why you do not have the mineral rights. The ERCB will review the circumstances and decide if an exemption is warranted.

**2. The applicant has the rights to a complete drilling spacing unit.**  
(Section 7.11.11)

YES means that you have secured the rights to a complete drilling spacing unit. Yes also means that for injection/disposal wells, observation wells, and water source wells, you have authorization from the mineral rights owner or lessee for the stated purpose.

**NO** means that you have not secured the rights to a complete drilling spacing unit.

If **NO**, you must attach a detailed explanation of the reason you do not have the entire drilling spacing unit. The ERCB will review the circumstances and decide if an exemption is warranted.

If you do not have all mineral rights for the entire drilling spacing unit and you are awaiting other ERCB approvals (e.g., reduced spacing application), your application may be premature. In these instances, you should not submit your well licence application unless you can meet current spacing requirements.

### **Step 10: Surface Rights**

---

**1. The surface owner is**

Check the appropriate box to indicate whether the surface owner is Crown or Freehold.

Freehold also includes federal lands and the land administered by the provincial Special Areas Board.

### **Step 11: Surface Impact**

---

*If you check a **BOLD** response, you must attach supporting information.*

**1. The ERCB water body setback requirements have been met.**  
(Section 7.11.12.1)

YES means that the well will meet the applicable water body setback requirements stated in Section 7.11.12.1 or that there is no water body located less than 100 m from a well centre.

**NO** means that due to exceptional circumstances, all applicable requirements as cited above have not been met.

If **NO**, you must attach an explanation as to why you cannot meet the water body setback requirements and include the methods to protect the water body. The ERCB will review the circumstances and decide if an exemption is warranted.

<b>1a. All other ERCB setback requirements have been met.</b> (Sections 7.11.12.2 to 7.11.12.5)	YES means the proposed well will meet all applicable surface improvement setback requirements outlined in Sections 7.11.12.2 to 7.11.12.5.  <b>NO</b> means <ul style="list-style-type: none"> <li>• that due to exceptional circumstances, all applicable requirements as cited above have not been met; or</li> <li>• the surface improvement is not a pipeline/utility right-of-way, gas co-op right-of-way, or a private access; or</li> <li>• you are not able to acquire the consent of the surface improvement owner.</li> </ul> If <b>NO</b> , you must attach a detailed explanation and if required include consent of the surface improvement owner and/or the approval from the Freehold lessee/owner. The ERCB will review the circumstances and decide if an exemption is warranted.
<b>2. The proposed well site and/or access road will meet ERCB environmental requirements.</b> (Section 7.11.13)	YES means the proposed well site or access road will meet all applicable environmental requirements stated in Section 7.11.13.  <b>NO</b> means that due to exceptional circumstances, all applicable requirements as cited above have not been met.  If <b>NO</b> , you must attach a detailed explanation as to why you cannot meet the requirements described in Section 7.11.13 and what mitigative measures will be in place. The ERCB will review the circumstances and decide if an exemption is warranted.
<b>3. The proposed well site requires <i>Historical Resources Act</i> clearance (Freehold land only).</b> (Section 7.11.14)	YES means the proposed well site requires clearance by Alberta Culture and Community Spirit, in accordance with the <i>Historical Resources Act</i> .  NO means that the proposed well site does not require clearance by Alberta Culture and Community Spirit.  YES means Alberta Culture and Community Spirit has granted clearance for the proposed well site.  <b>NO</b> means Alberta Culture and Community Spirit has not granted clearance for the proposed well site.  If <b>NO</b> , you must attach a detailed explanation as to why Alberta Culture and Community Spirit has not provided clearance. The ERCB will review the circumstances and decide if an exemption is warranted.
<b>3a. If YES, clearance has been granted for the well site (Freehold land only).</b>	

## Step 12: Working Interest Participants

<b>1. The licensee is the only working participant.</b>	YES means that at the time of application you are the 100 per cent working interest participant in the proposed well.  NO means that at the time of application you are not the only working interest participant in the proposed well. You must fill out Schedule 4.1, identifying all of the working interest participants and their percentage interest in the proposed well, totalling 100 per cent, and attach a completed Schedule 4.1.
---	---

### Step 13: Operational Disclosure

---

<b>1. Underbalanced drilling operations will be conducted. (ID 94-03)</b>	YES means that underbalanced drilling operations will be conducted and you will meet the requirements described in ID 94-03 and Directive 010, as well as in IRP Volume 6 if Category E well.  NO means that underbalanced drilling operations will not be conducted.
<b>2. The well will encounter reservoirs that will be subject to enhanced recovery or acid gas injection schemes or to CO<sub>2</sub> greater than 1 per cent in the producing formation.</b>	YES means that the well will encounter at least one reservoir subject to <ul style="list-style-type: none"><li>• an enhanced recovery scheme,</li><li>• an acid gas injection or disposal scheme,</li><li>• an unusual or atypical reservoir scenario that may impact the H<sub>2</sub>S release rate assessment for the well, or</li><li>• CO<sub>2</sub> gas present in a volume greater than 1 per cent in the producing formation.</li></ul> NO means that the well will not encounter a reservoir as described above.

### **Working Interest Participants—Wells**

DAY      MONTH      YEAR      ERCB APPLICATION NUMBER

**APPLICANT'S REFERENCE**

## 1. IDENTIFICATION

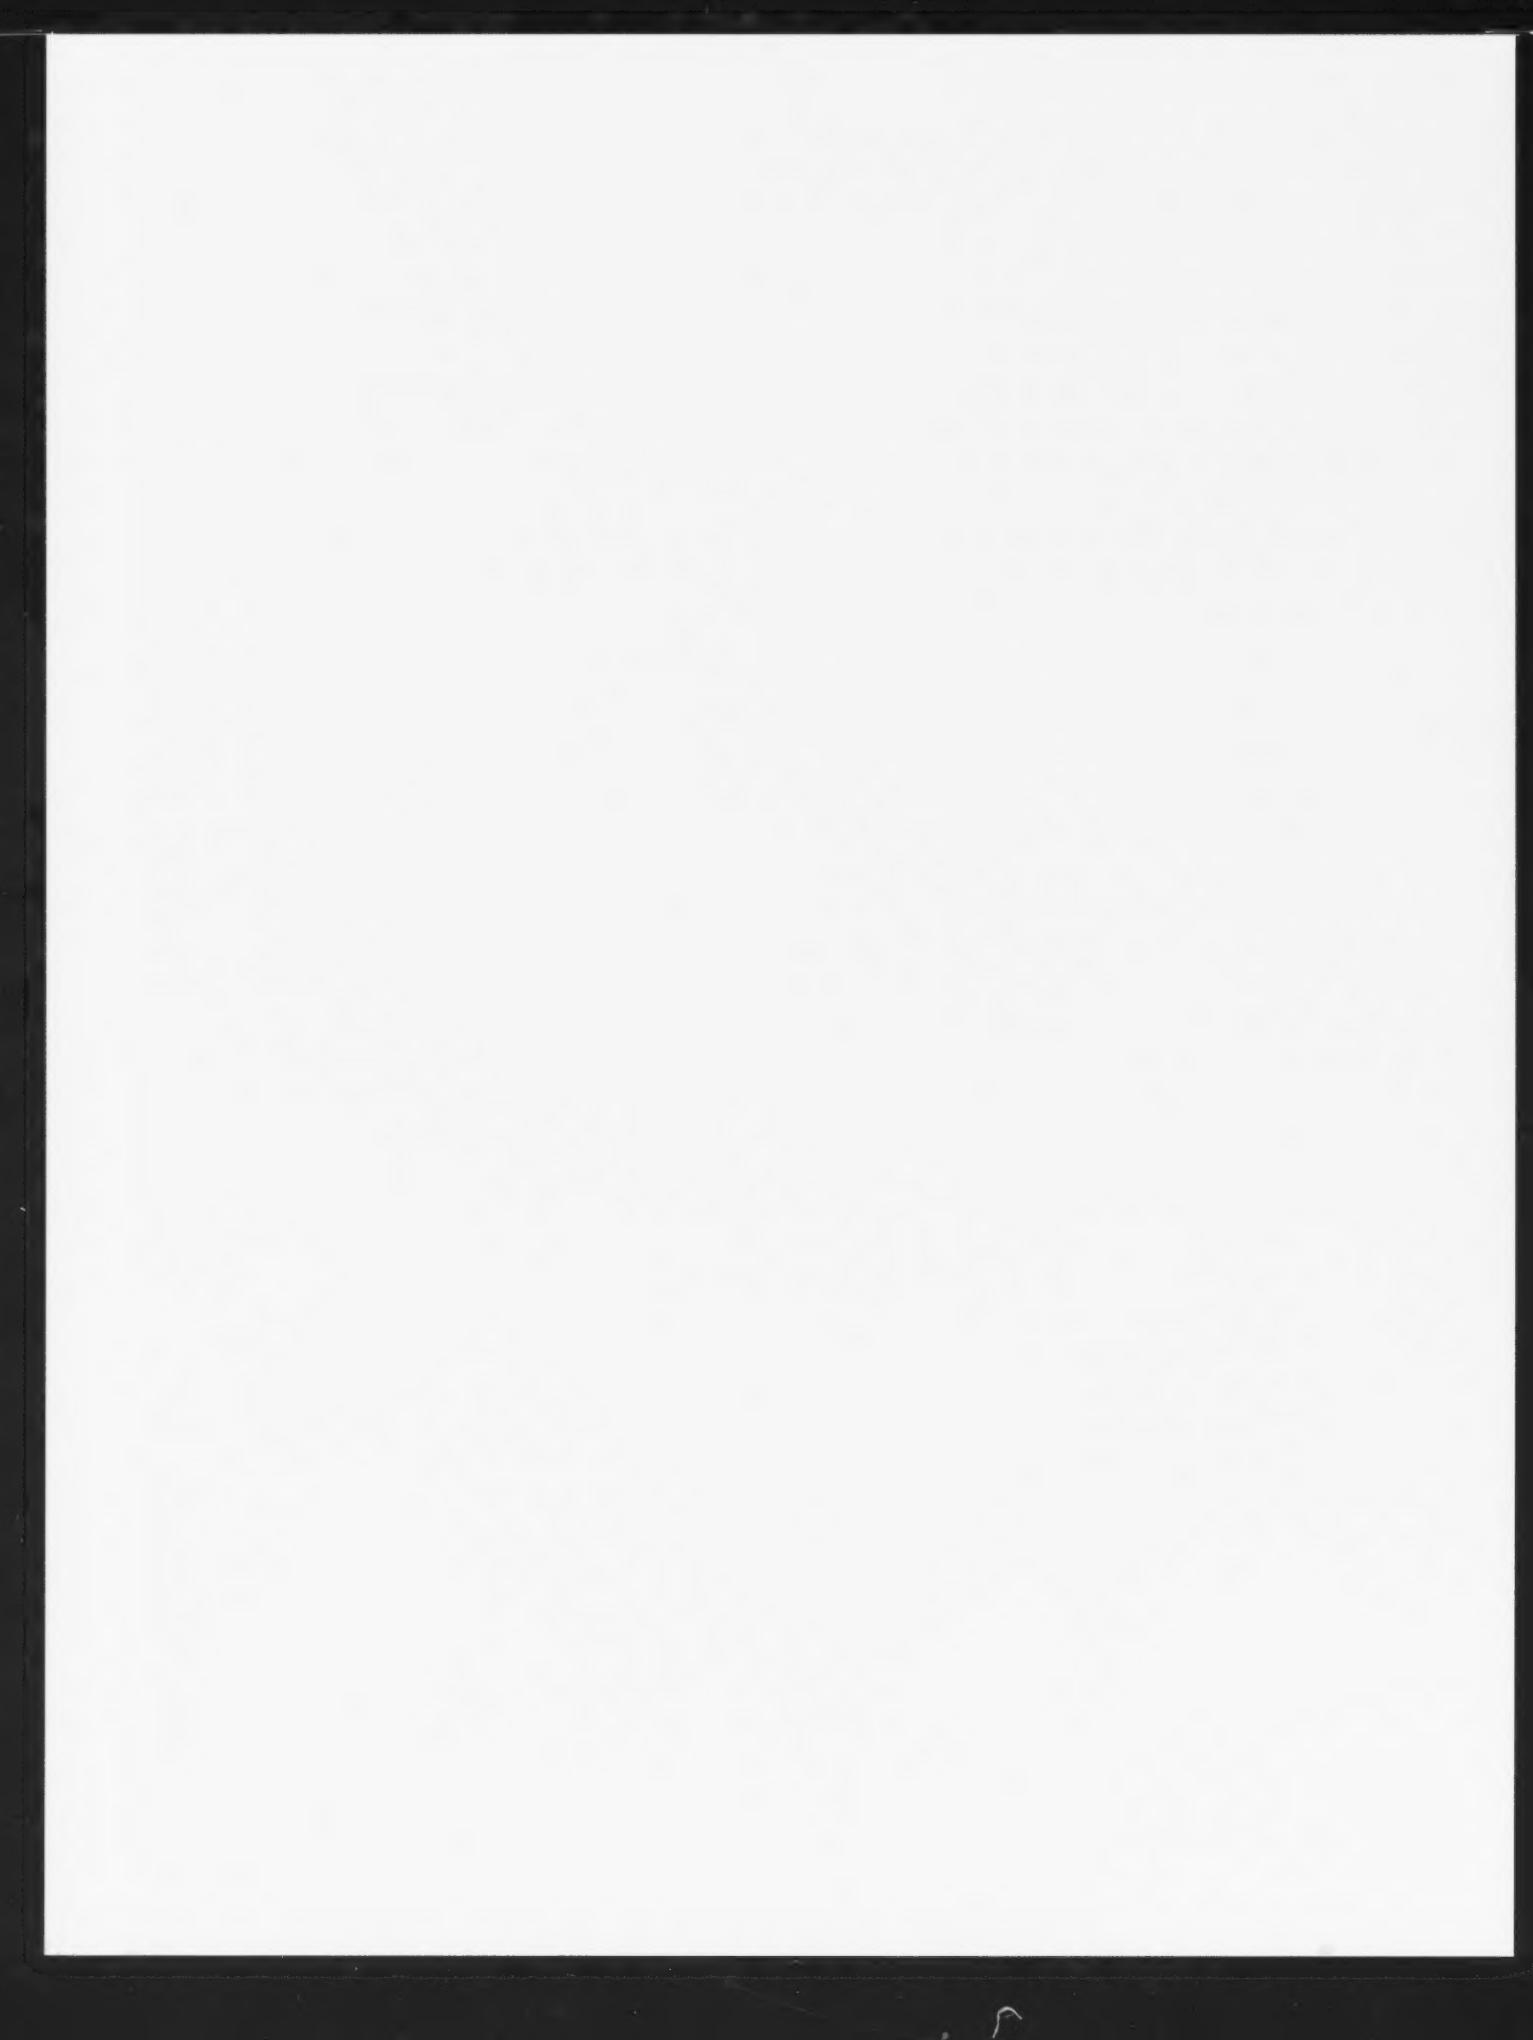

**Company Name:** \_\_\_\_\_

**Applicant BA Code**

## **2. WORKING INTEREST PARTICIPANTS**

Company Name

### Percentage

#### **7.14.2 How to Complete Schedule 4.1: Working Interest Participants—Wells**

*You must provide working interest participant information when you are not the 100 per cent interest participant in the proposed well. The applicant must be a working interest participant in the well in order to apply for a well licence.*

<b>Date</b>	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
<b>Applicant's Reference</b>	Enter your own file reference in the designated area (optional).

---

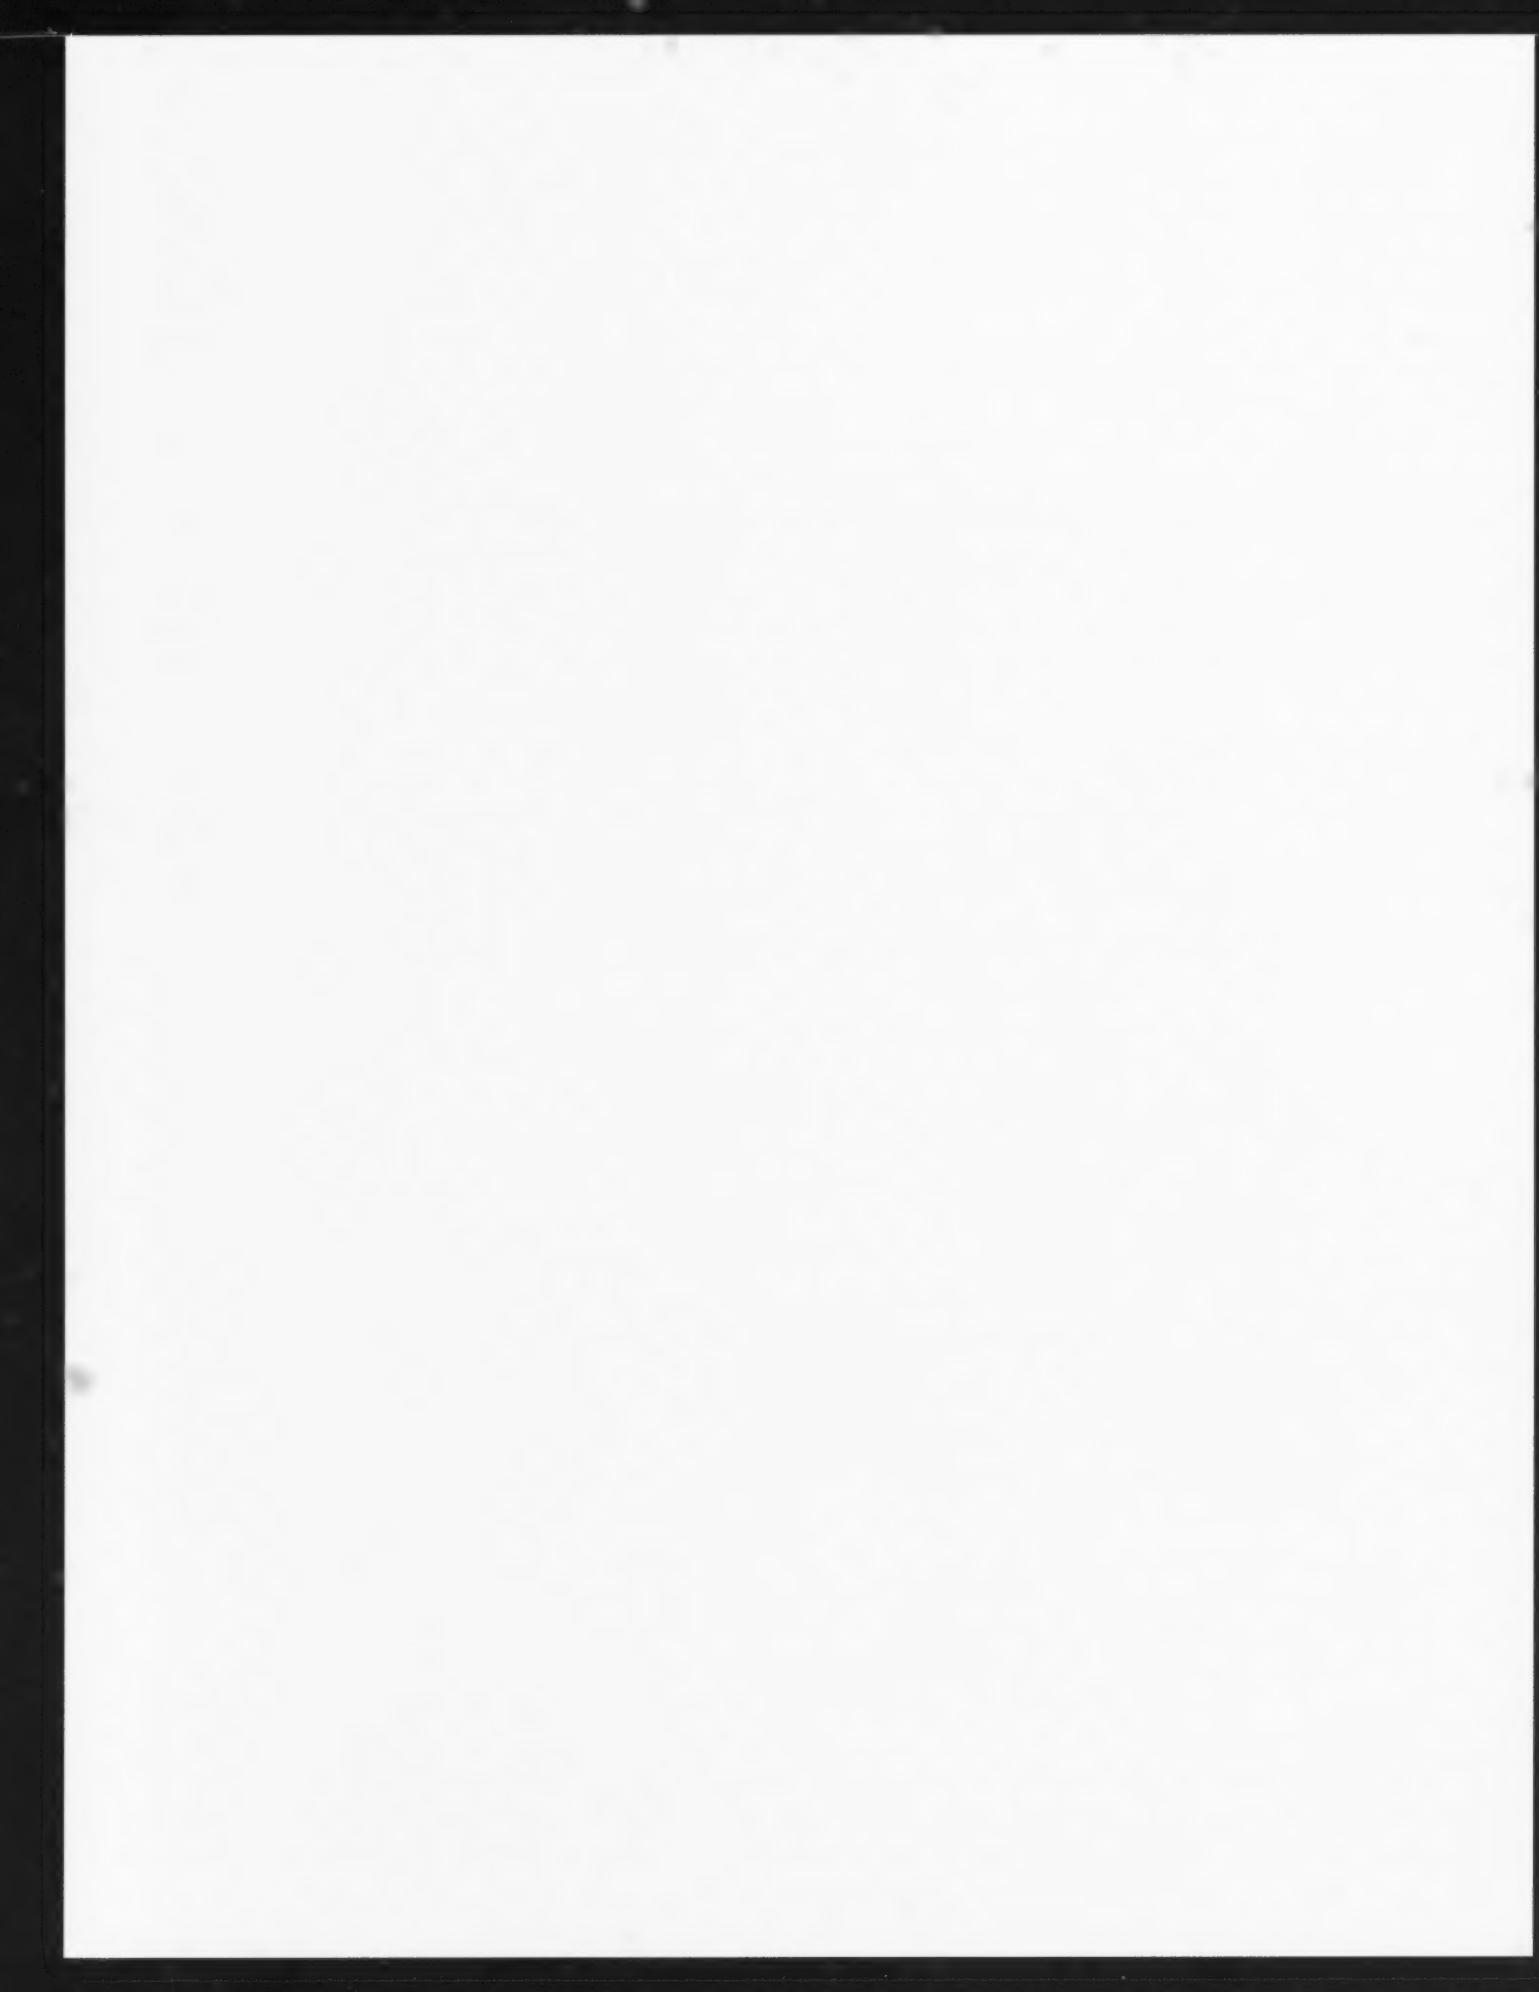

#### **Step 1: Identification**

<b>Company Name</b>	Enter the full corporate name of the applicant.
<b>Applicant BA Code</b>	Enter the 4-digit business associate (BA) code issued to your company by the ERCB.

---

#### **Step 2: Working Interest Participants**

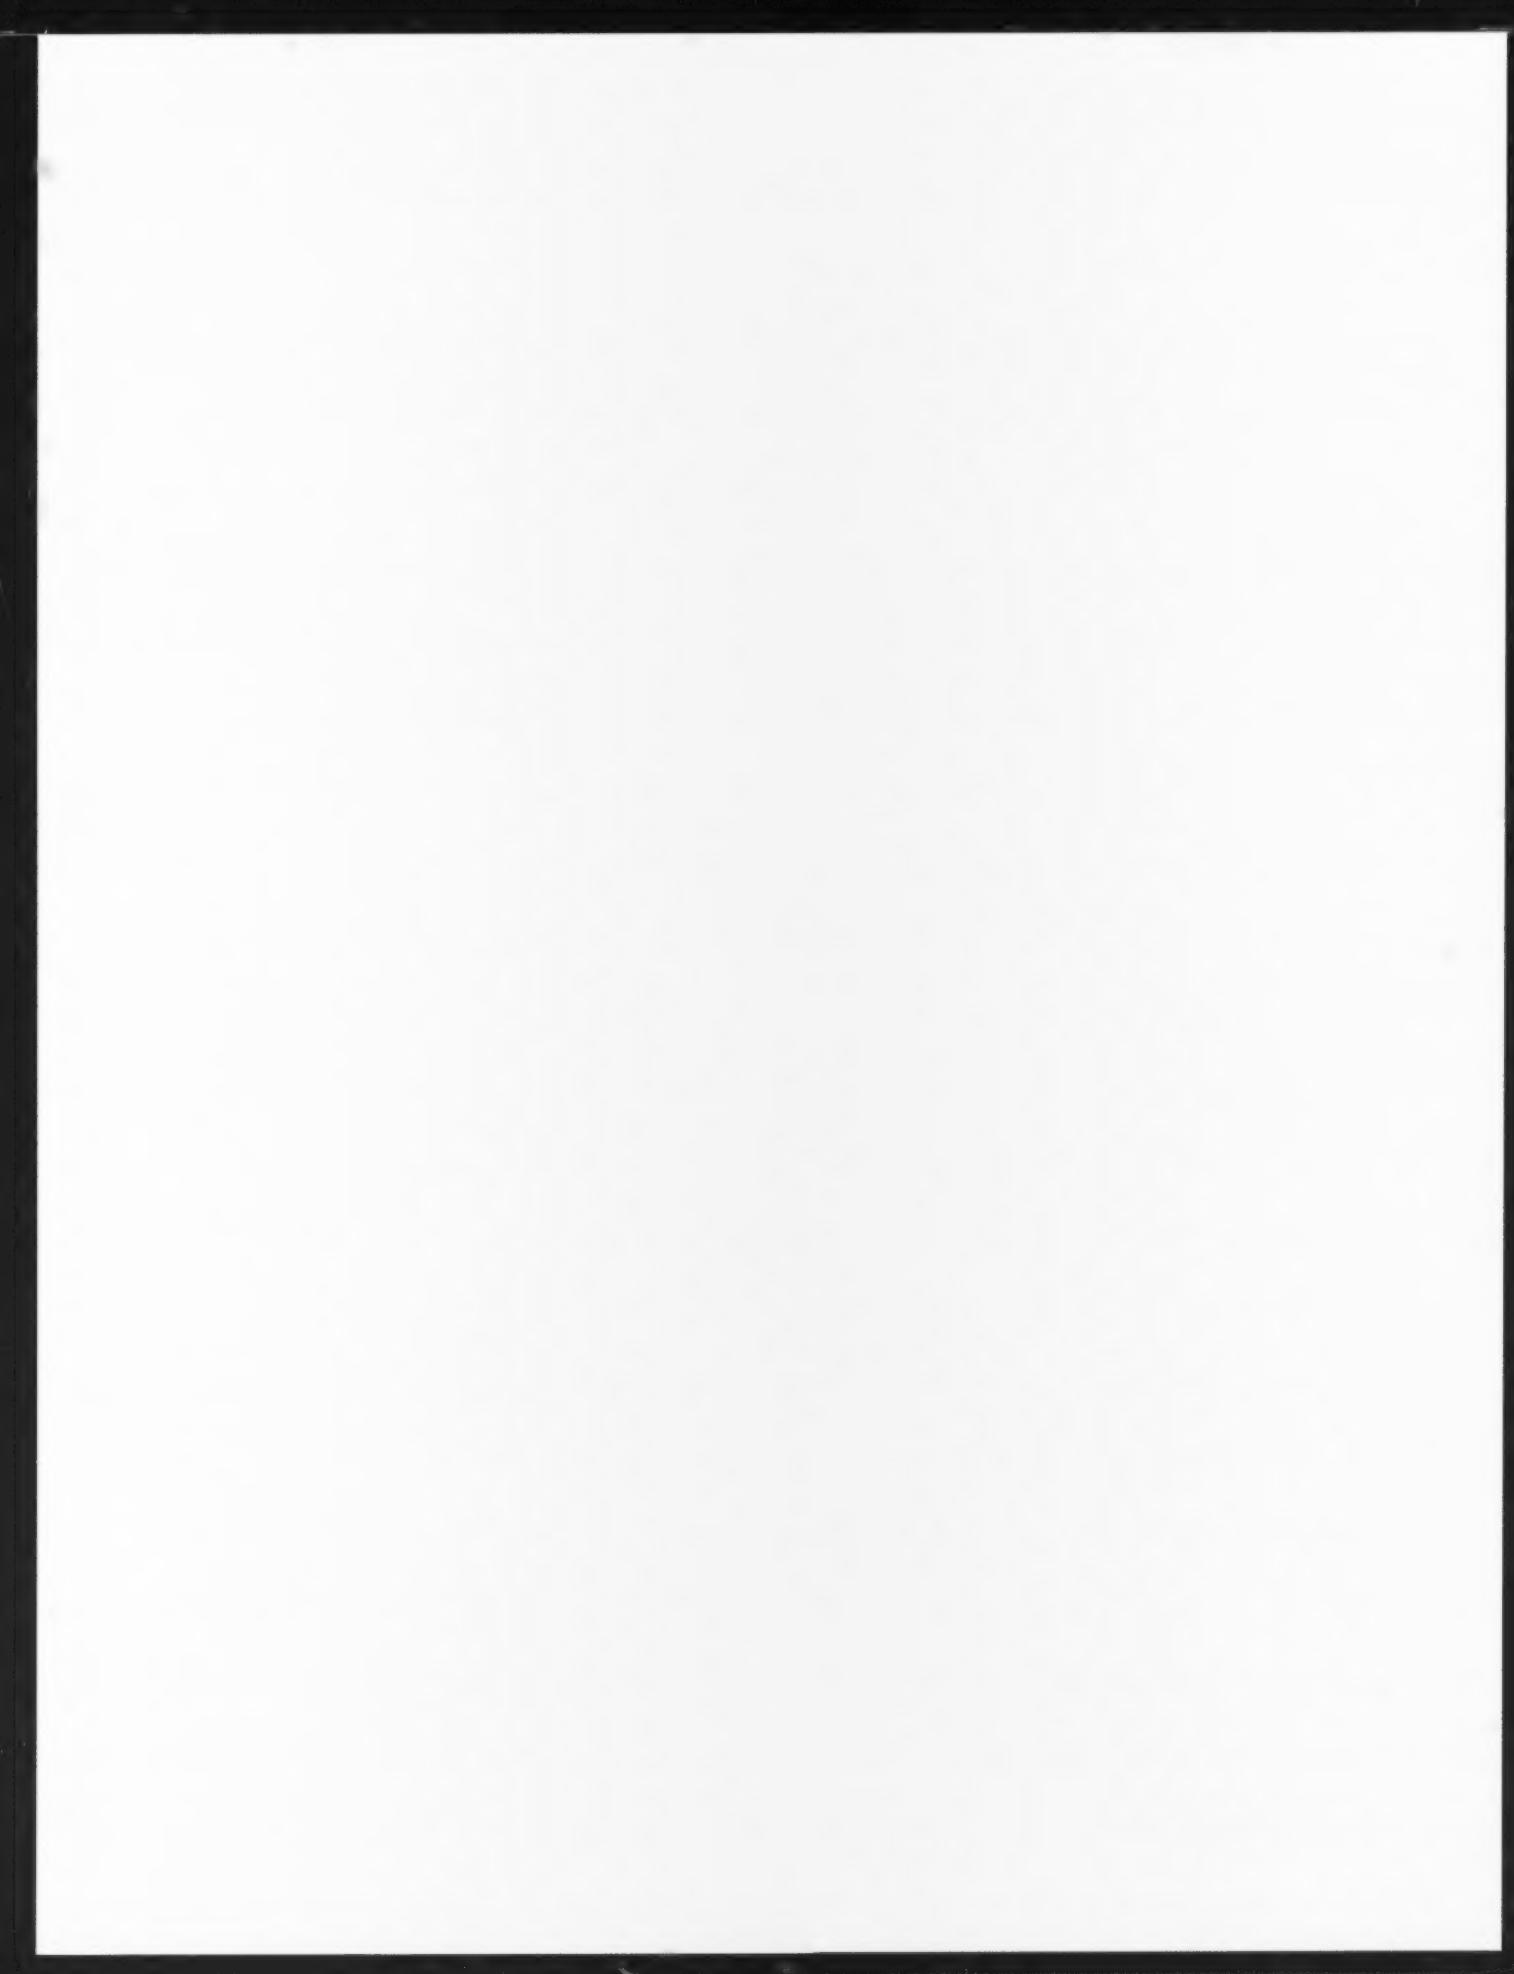

<b>Company Name</b>	Enter the full corporate name of all working interest participants, including your company name, in the table provided.  The ERCB will not accept an entry of “Partnership.” You must determine which company or companies within the partnership should be entered as working interest participants.
<b>Percentage</b>	Enter each participant’s percentage of participation in the well.  Working interest participation must total 100 per cent.

### **7.14.3 How to Complete Schedule 4.2: Multiwell Pad Location**

*If you are submitting an application for a multiwell pad through the Facilities Applications' EAS system, multiwell information is collected and displayed in Section 7: Well Detail of Schedule 4.*

You must complete and submit Schedule 4.2 to provide specific data elements for the second and subsequent wells to be drilled from a multiwell pad location, provided the following applies to all wells that are to be drilled:

- The surface location of all wells will be the same legal subdivision or adjoining legal subdivision.
- All wells are the same well type (e.g., injection, production).
- The wells are to be licensed under the same section of the OGCR.

You must complete and submit Schedule 4.2 to provide specific data elements for oil and oil sands evaluation wells to be licensed under Section 2.030 of the OGCR, provided that

- they are part of the same project, and
- the producing and terminating formations are the same for all wells applied for.

<b>Date</b>	Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).
<b>Applicant's Reference</b>	Enter your own file reference in the designated area (optional).
<b>Well Name</b>	Well names are created by EAS to be consistent with OGCR Section 13.020. Applicants should not change the well name created by EAS and only indicate or add the optional particulars required to distinguish the proposed well to a maximum of 36 characters.
<b>Bottomhole Location</b>	Enter the bottomhole location of the wellbore if different from surface location using the Dominion Land Survey System.
<b>Drilling Operation</b>	Enter the type of drilling operation being conducted (i.e., vertical, directional, horizontal, slant, or natural drift).
<b>Surface Location</b>	Enter the surface location of each well on the pad, if different from the location supplied in Schedule 4: Step 7, as surveyed using the Dominion Land Survey System.
<b>Surface Coordinates</b>	Enter the north/south and east/west coordinates for the surface location measured from the well to the outside boundaries of the section containing the well and rounded to the nearest 0.1 m.
<b>N/S    E/W</b>	Enter "N" or "S", "E" or "W", as appropriate, to designate the direction of measurement from the well to the section boundary.
<b>Surface Casing Depth</b>	Enter the surface casing depth rounded to the nearest 0.1 m.
<b>Projected Total Depth</b>	Enter the projected total depth to the nearest metre.

<b>True Vertical Depth</b>	Enter the true vertical depth to the nearest metre if the well is expected to deviate from vertical.
<b>Ground Elevation</b>	Enter the surveyed ground elevation rounded to the nearest 0.1 m.
<b>Mineral Rights</b>	Enter "Alberta Crown," "Freehold," or "Both," as appropriate.
<b>Surface Latitude</b>	Enter the surface location latitude and longitude in decimals of degrees to 6 decimal places based on the North American Datum 1983 (NAD 83).
<b>Surface Longitude</b>

ERCB APPLICATION NUMBER

APPLICANT'S REFERENCE \_\_\_\_\_

**1. H<sub>2</sub>S RELEASE RATE WELL PROGNOSIS BY POTENTIAL H<sub>2</sub>S HORIZON**

Formation Code	Formation Name	Drilling Case* (m <sup>3</sup> /s)	Completion/Servicing Case (m <sup>3</sup> /s)	Suspended/Producing Case (m <sup>3</sup> /s)

\* Include formation encountered at total depth when completing drilling case.

**2. CUMULATIVE H<sub>2</sub>S RELEASE RATE (RR)**

	Drilling Case (m <sup>3</sup> /s)	Completion/Servicing Case (m <sup>3</sup> /s)	Suspended/Producing Case (m <sup>3</sup> /s)
Maximum Cumulative H <sub>2</sub> S RR			

1. Intermediate casing to be set ..... YES  NO   
 2. Maximum H<sub>2</sub>S concentration encountered in well ..... ppm ..... mol/kmol ..... %  
 3. Anticipated suspended/producing level as per ID 97-06      Level 1      Level 2      Level 3      Level 4      N/A

**3. CALCULATED EMERGENCY PLANNING ZONE (EPZ)**

	Drilling Case (km)	Completion/Servicing Case (km)	Suspended/Producing Case (km)
Maximum calculated EPZ			
Number of occupied dwellings, public facilities, and/or places of business inside the calculated EPZ			

1. Distance to nearest surface development ..... km  
 2. Distance to nearest urban centre ..... km  
 3. A site-specific ERP is required ..... YES  NO   
 3a. If YES, the ERP has been submitted to the Emergency Planning and Assessment Section ..... YES  NO

**4. CRITICAL WELL ONLY**

1. All equipment and practices for the drilling of this well will meet or exceed the requirements of ID 97-06 and IRP Volume 1 ..... YES  NO

#### **7.14.4 How to Complete Schedule 4.3: Well H<sub>2</sub>S Information**

*You must complete a separate Schedule 4.3 for each Category C, D, and E well or well pad licence application.*

*For well pad licence applications, you must choose the maximum cumulative H<sub>2</sub>S release rate assessment values for the entire pad. You may choose to file separate well or well pad licence applications if you do not wish to accept the maximum cumulative H<sub>2</sub>S release assessment rate value for the entire pad.*

**Date** Enter the date on which you will submit this schedule to the ERCB in the upper left corner (e.g., 15 Jan 2011).

**Applicant's Reference** Enter your own file reference in the designated area (optional).

---

#### **Step 1: H<sub>2</sub>S Release Rate Well Prognosis by Potential H<sub>2</sub>S Horizon (Section 7.11.15)**

---

*You must address the H<sub>2</sub>S potential of all formations encountered by the well. If your analysis has determined that there is no potential to encounter H<sub>2</sub>S in a formation, you must demonstrate that the formation has been considered in your evaluation by recording zero (0) for the release rate information.*

*For the purpose of the H<sub>2</sub>S evaluation, you must consider the formation encountered at total depth when completing the drilling case (i.e., evaluate all formations included in the 15 m overhole interval).*

**Formation Code** Enter the formation code for each formation considered in your H<sub>2</sub>S evaluation. Formation codes are available on the ERCB Web site [www.crcb.ca](http://www.crcb.ca) under Rules, Regulations, Requirements : Reference Codes.

**Formation Name** Enter the formation name for each formation considered in your H<sub>2</sub>S evaluation. Formation names are available on the ERCB Web site [www.crcb.ca](http://www.crcb.ca) under Rules, Regulations, Requirements : Reference Codes.

**Drilling Case** Enter the drilling case H<sub>2</sub>S release rate in cubic metres per second (m<sup>3</sup>/s) to 4 decimal places for each formation considered in your H<sub>2</sub>S evaluation. Include formation encountered at total depth when completing drilling case.

Enter zero (0) if you determine there is no potential to encounter H<sub>2</sub>S in the formation.

**Completion/Servicing Case** Enter the completion/service case H<sub>2</sub>S release rate in m<sup>3</sup>/s to 4 decimal places for each formation considered in your H<sub>2</sub>S evaluation.

Enter zero (0) if you determine there is no potential to encounter H<sub>2</sub>S in the formation or the formation is not targeted for completion.

**Suspended/Producing Case** Enter the suspended/production case H<sub>2</sub>S release rate in m<sup>3</sup>/s to 4 decimal places for each formation you plan to produce that was considered in your H<sub>2</sub>S evaluation.

Enter zero (0) if you determine there is no potential to encounter H<sub>2</sub>S in the formation.

### **Step 2: Cumulative H<sub>2</sub>S Release Rate (RR)**

---

*Enter the maximum cumulative H<sub>2</sub>S release rate values in the table provided.*

**Drilling Case** Enter the maximum drilling case cumulative H<sub>2</sub>S release rate in m<sup>3</sup>/s to 4 decimal places, as determined by your H<sub>2</sub>S release rate assessment.

**Completion/Servicing Case** Enter the maximum completion/servicing cumulative H<sub>2</sub>S release rate in m<sup>3</sup>/s to 4 decimal places, as determined by your H<sub>2</sub>S release rate assessment for the completion/servicing formation(s).

**Suspended/Producing Case** Enter the maximum suspended/producing H<sub>2</sub>S release rate in m<sup>3</sup>/s to 4 decimal places, as determined by your cumulative H<sub>2</sub>S release rate assessment for the producing formation(s).

**1. Intermediate casing to be set** YES means that intermediate casing will be set in the well.

NO means that intermediate casing will not be set; therefore, the maximum cumulative H<sub>2</sub>S release rate should reflect the total potential flow from the well.

**2. Maximum H<sub>2</sub>S concentration encountered in the well** Enter the maximum potential H<sub>2</sub>S concentration that you anticipate to encounter in the well in parts per million (ppm), moles per kilomole (mol/kmol), or percentage (%).

**3. Anticipated suspended/producing level as per ID 97-06** Check the level classification, based on the anticipated producing level of the well, as outlined in ID 97-06.

N/A means that in accordance with Table 7.5, the producing horizon suspended/producing H<sub>2</sub>S release rate is less than 0.01 m<sup>3</sup>/s.

### **Step 3: Calculated Emergency Planning Zone (EPZ)**

---

*Enter the maximum calculated EPZ for each release rate scenario (Section 7.11.2):*

**Drilling Case** Enter the maximum calculated EPZ for the drilling case in km rounded to the nearest 0.01 km.

**Completion/Servicing Case** Enter the maximum calculated EPZ for the completion/servicing case in km rounded to the nearest 0.01 km.

**Suspended/Producing Case** Enter the maximum calculated EPZ for the suspended/producing case in km rounded to the nearest 0.01 km.

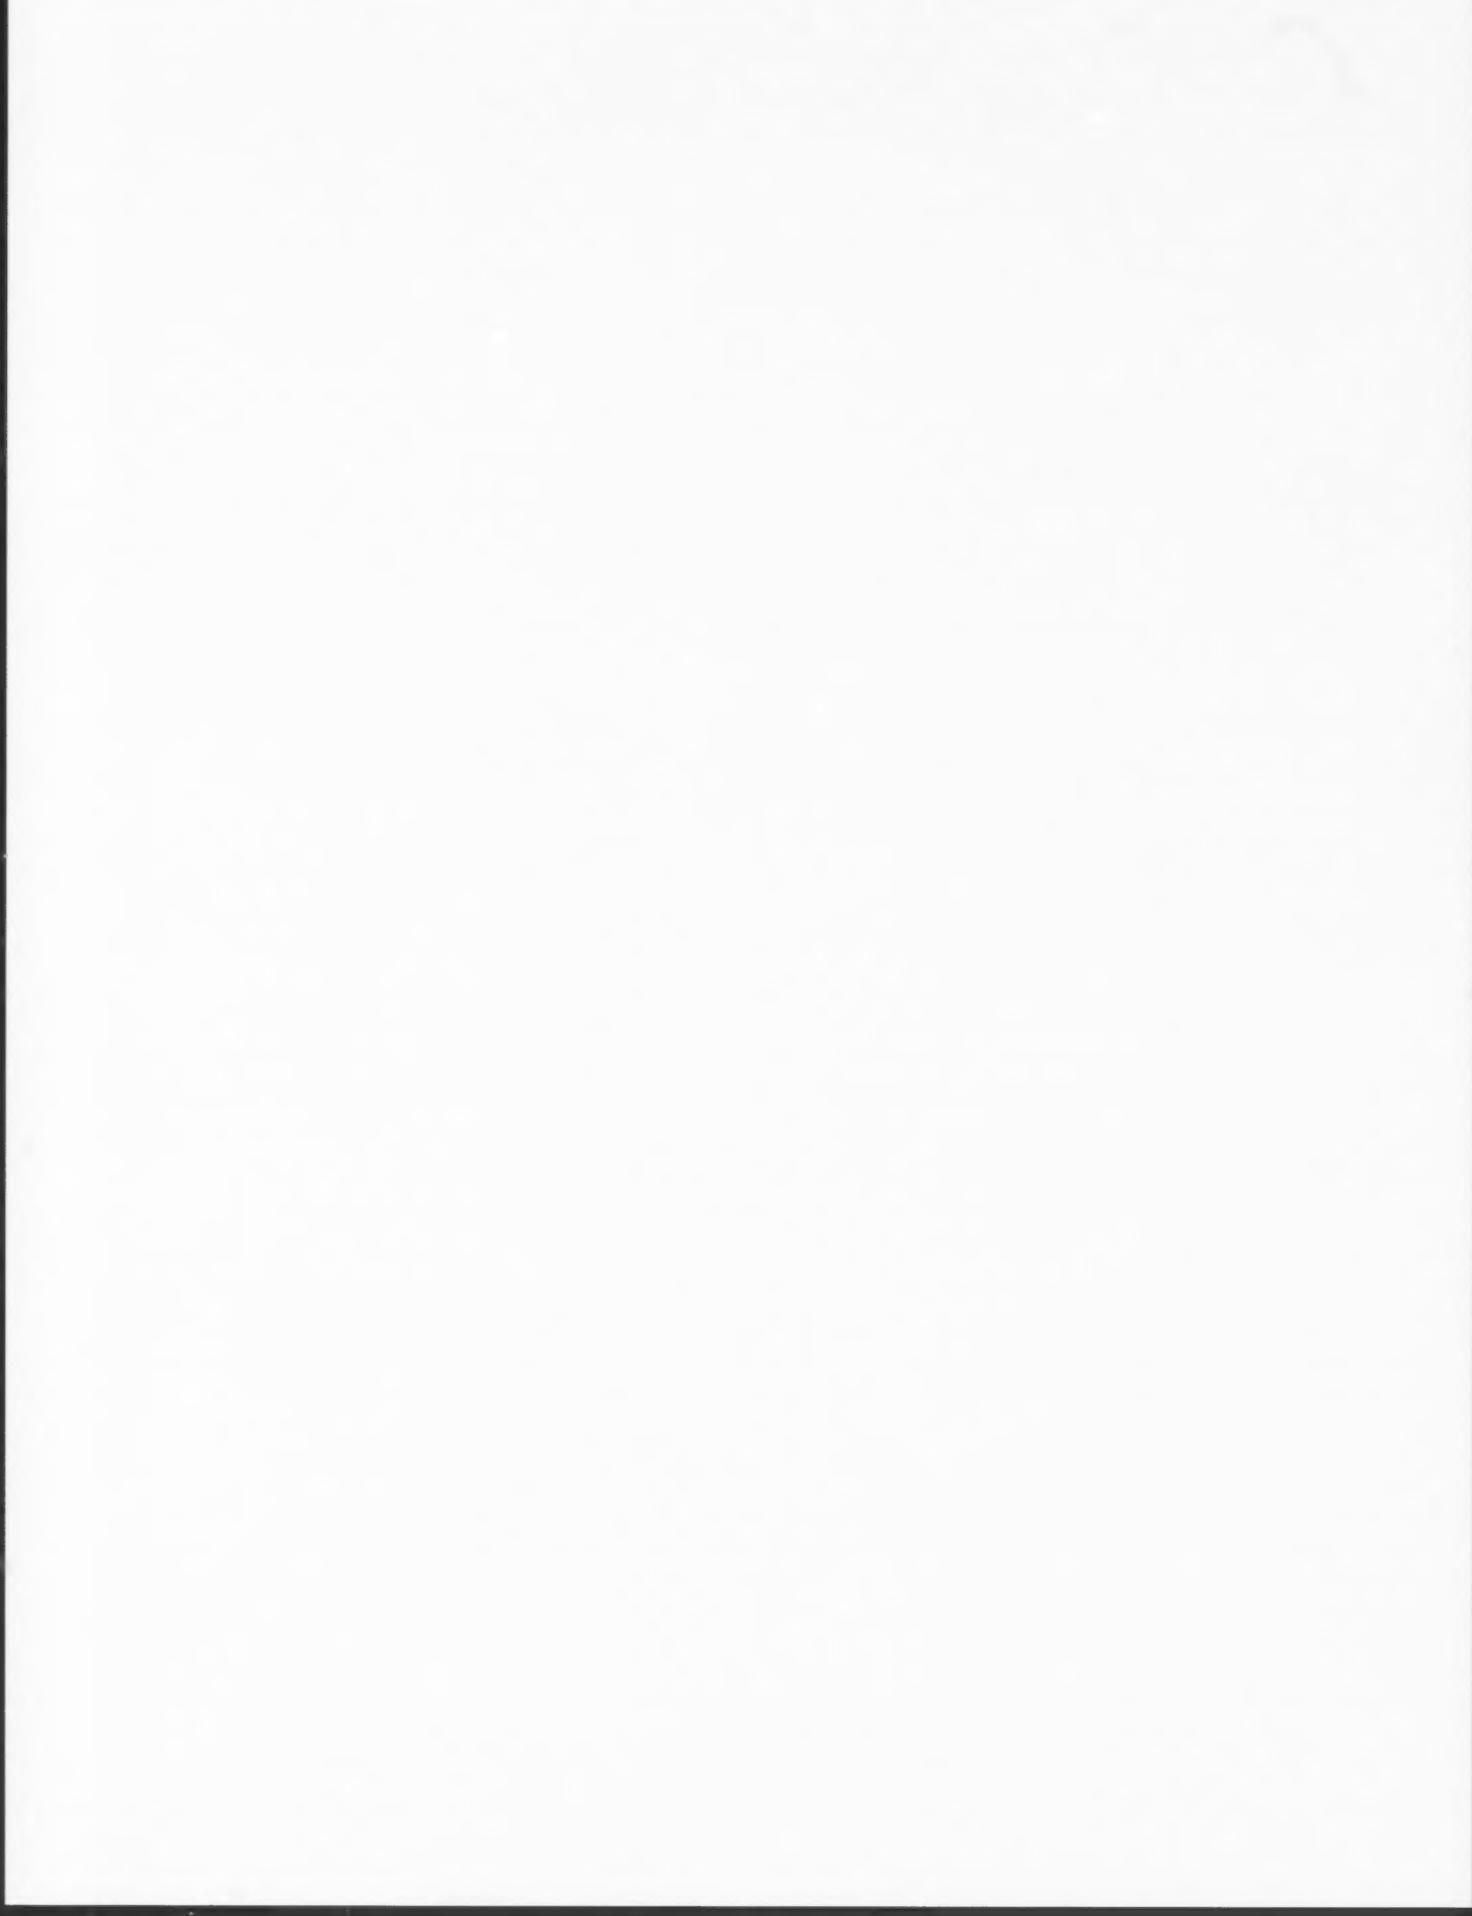

*Enter the number of occupied dwellings, public facilities, and/or places of business inside the calculated EPZ for each release rate scenario:*

<b>Drilling Case</b>	Enter the number of occupied dwellings, public facilities, and/or places of business inside the calculated EPZ for the drilling case.
<b>Completion/Servicing Case</b>	Enter the number of occupied dwellings, public facilities, and/or places of business inside the calculated EPZ for the completion/servicing case.
<b>Suspended/Producing Case</b>	Enter the number of occupied dwellings, public facilities, and/or places of business inside the calculated EPZ for the suspended/producing case.
<b>1. Distance to nearest surface development</b>	Enter the distance, in km to 2 decimal places, from the well centre to the nearest surface development.  If there is no surface development within the EPZ, a distance to the nearest town, village, or urban centre may be used. Where there is no EPZ, a search should be done to at least 1.5 km; if there is no surface development within this distance, enter 1.5 km.
<b>2. Distance to nearest urban centre</b>	Enter the distance, in km to 2 decimal places, to the nearest urban centre.
<b>3. A site-specific ERP is required.</b>	YES means that a site-specific emergency response plan (ERP) is required.  NO means that a site-specific ERP is not required.  YES means that a site-specific ERP is required and has been submitted to the Emergency Planning and Assessment Section  NO means that a site-specific ERP is required but has not been submitted to the Emergency Planning and Assessment Section.
<b>3a. If YES, the ERP has been submitted to the Emergency Planning and Assessment Section.</b>	

---

#### **Step 4: Critical Well Only**

<b>1. All equipment and practices for the drilling of this well will meet or exceed the requirements of ID 97-06, Directive 036, and IRP Volume 1.</b>	YES means that for Category E wells all equipment and practices for the drilling of the well will meet or exceed the requirements of <i>ID 97-06, Directive 036, and the current IRP Volume 1</i> .  NO means that all equipment and practices for the drilling of this well will not meet or exceed the requirements of <i>ID 97-06, Directive 036, and the current IRP Volume 1</i> or a waiver has been issued by the ERCB Well Operations Group.  If NO, you must attach a copy of the waiver approval issued by the ERCB Operations Group, a statement that a waiver application has been made and approval is pending, or the waiver request to your application. The ERCB will review the circumstances and decide if an exemption is warranted.
--	---

## **Section 8 Additional Application Requirements (Special Circumstances)**

### **8.1 Overview**

This section sets out application-related requirements that address specific locations or circumstances. It is included to avoid creating multiple directives on specific matters that primarily relate to the *Directive 056* energy development applications process.

### **8.2 Battle Lake Area Application Requirements**

#### **8.2.1 Background**

Battle Lake is a unique environment in that it remains essentially a wilderness lake convenient to major population centres (one hour from Edmonton and Red Deer and two and a half hours from Calgary). In 1974, the County of Wetaskiwin commissioned a study about Battle Lake and gave the lake a protected status, with overwhelming support from area residents. That status was later modified into the county's general plan and a watershed protection district was formed. The provincial government also recognized the merit of protecting the area by creating the Mount Butte and South Battle Lake Natural areas, which now protect about one-third of the shoreline and riparian zones, as well as some of the upland habitat.

Subsequent to *Decision 2005-129: Review of Well Licence No. 0313083 and Application for Associated Battery and Pipeline, Pembina Field*, the Alberta Energy Regulatory (AER; formerly the Energy Resources Conservation Board) engaged Battle Lake area stakeholders in a pilot project to address upstream oil and gas development issues. After a detailed review, the area stakeholders recommended and the AER concurred that further disturbance by oil and gas development in close proximity to Battle Lake and surface water features in the contributing watershed (designated as the Tier 1 area) should be avoided where practical. In particular, lands within the Tier 1 area are closely linked to Battle Lake. Should spills or leaks occur, contaminants would quickly enter Battle Lake, giving limited opportunity to implement effective emergency measures. The Tier 1 areas include bald eagle nesting sites, fish spawning grounds, and unique vegetation communities (fern meadows), as well as natural upland wildlife habitat areas. Battle Lake community residents hold very strong views that further development within Tier 1 areas is not acceptable.

As a result, the AER has determined that licence applications for oil and gas facilities located in the designated Tier 1 area will be considered through the *Directive 056* nonroutine application licensing process. The designated Tier 1 area as of May 1, 2007, includes Townships 45 and 46, Ranges 2 and 3, West of the 5th Meridian, and is illustrated in figure 8.1. Note that the current mapping of the area may not have identified and designated all water features, notably springs in the area. It is intended that water features in the watershed be protected. Therefore, potential development sites need to be assessed to verify whether unmapped water features are present. If unmapped water features are identified, these areas are to be protected consistent with Tier 1 practices.

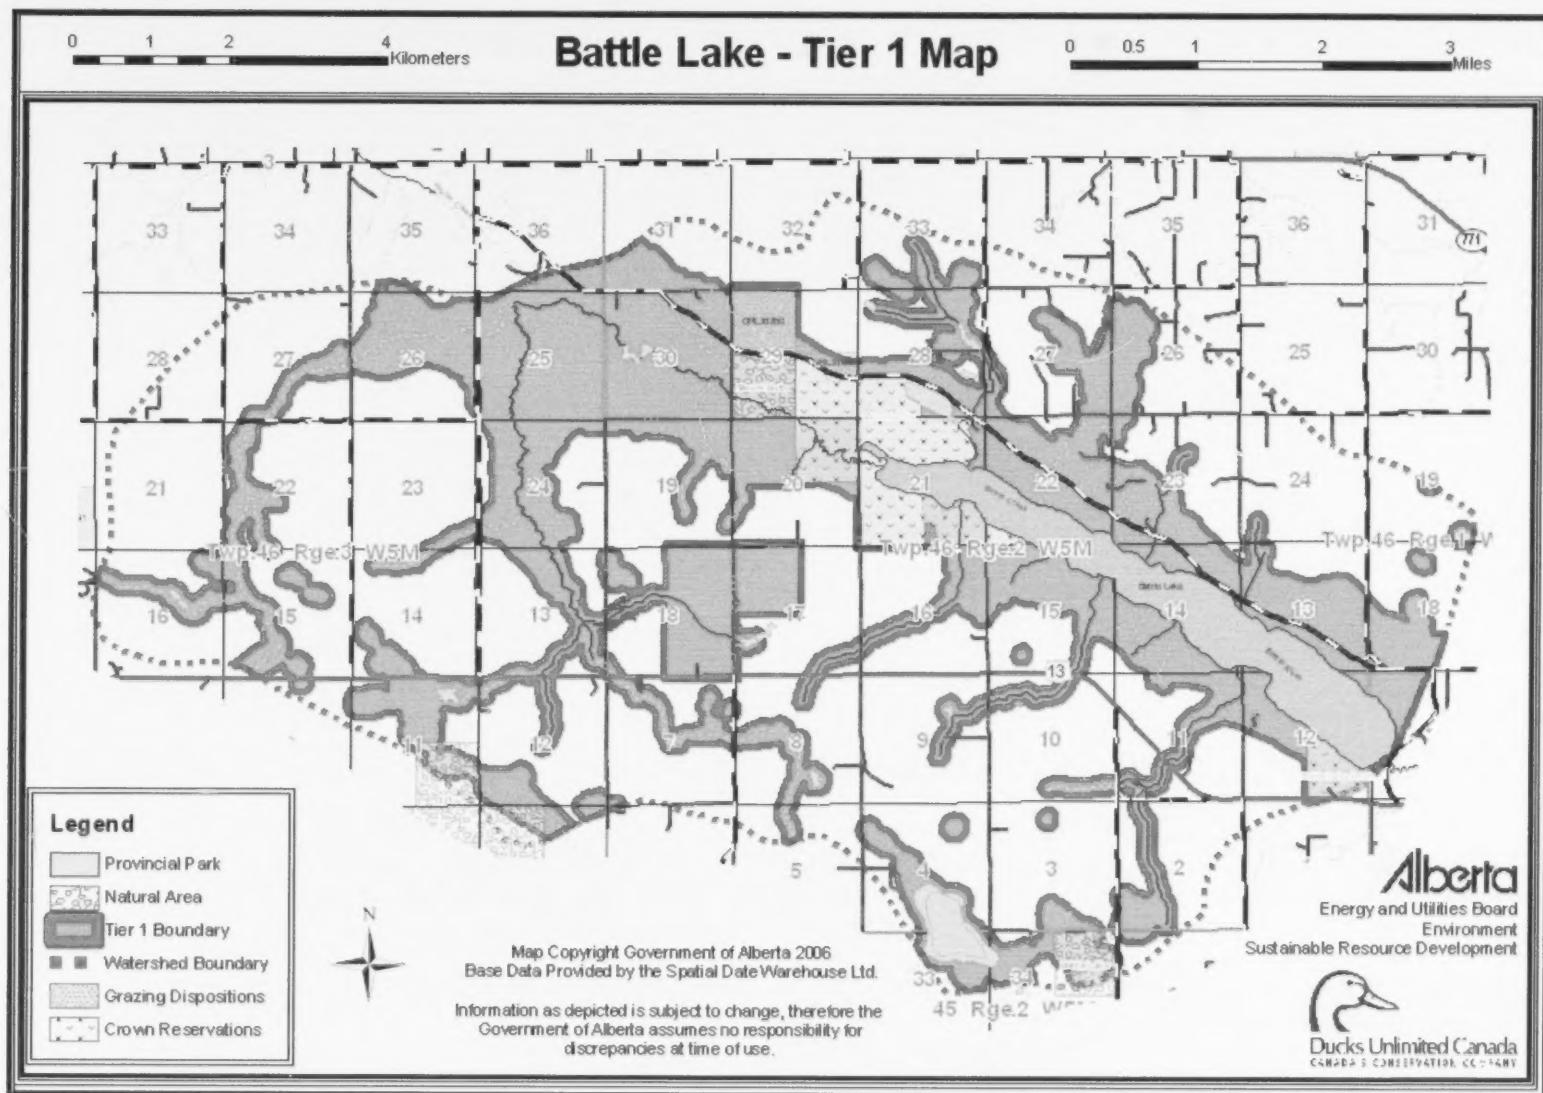

Figure 8.1. Battle Lake Tier 1 nonroutine application area

### **8.2.2 Battle Lake Tier 1 Area Definition**

The Tier 1 area is defined as surface lands within

- 100 m of water features that feed into Battle Lake (water features for the purpose of this criterion include permanent and recurring streams, springs, and wetlands [fens, bogs, muskeg, marshes]; these include water bodies and wetlands as defined by the more stringent or comprehensive designations in the *Water Act* and the Alberta Wetland Policy);
- 100 m of the 900 m (2950 foot) elevation contour along the shoreline of Battle Lake (top of the escarpments that parallel the lake); and
- the Mount Butte natural area, County natural areas, South Battle Lake Natural Area, and remaining undisturbed natural areas on public lands.

### **8.2.3 Application Requirements for the Tier 1 Area**

Proposed development within the Tier 1 area is subject to the following requirements:

- 1) Proponents must investigate alternative approaches for oil and gas development and, where feasible, are expected to select those that avoid further disturbance of Tier 1 areas.
- 2) If development within Tier 1 area is viewed as unavoidable, proponents must
  - a) assess opportunities to use existing facilities, road access, pipeline rights-of-way, and other pre-existing disturbances and to minimize incremental disturbances in Tier 1 areas,
  - b) ensure that well, production battery, compressor, and gas plant sites located in Tier 1 have appropriate mitigative measures to prevent fluid spills and contaminated runoff from entering wetlands, streams, or the lake during construction and operational phases (e.g., runoff containment berms and retention ponds, catch-pans or devices for equipment seal leaks), and
  - c) incorporate mitigative measures to maintain the integrity of pipelines and provide for early detection of and response to leaks for new hydrocarbon liquid and produced water pipelines traversing Tier 1 lands.
- 3) Proponents must conduct a preapplication on-site assessment to determine site and pipeline/road locations that will
  - a) avoid sensitive habitats that may include bald eagle nesting sites, fawn meadow sites, and other unique ecological features that may be identified,
  - b) identify and avoid steep slopes where construction could require significant surface disturbance or aggravate erosion problems, and
  - c) avoid disturbance of springs, streams, and wetlands.

A primary purpose of the site assessment is to verify whether unmapped water features are present. If unmapped water features are identified, these areas are to be protected.

The AER encourages applicants to

- participate in the Battle Lake Watershed Synergy Group,
- review their plans and explain their rationale for their proposed development in Tier 1 areas at a regular meeting of the synergy group, and
- consult with the Battle Lake Preservation Society and seek its advice on locations and mitigative measures for new development in Tier 1 areas.

4) In addition to the required nonroutine documentation, all *Directive 056* applications for development in the Tier 1 area must be accompanied with justification that includes the following information:

- a) a cover letter that identifies that the proposed development is within the Battle Lake Tier 1 area;
- b) an explanation of the alternatives involving development outside Tier 1 areas that have been investigated and an explanation of why these are not technically feasible; the alternatives are to be compared with the application case in terms of potential land disturbance and other watershed effects, impacts on the public, resource recovery, and feasibility;
- c) a description of the proposed site that describes existing cover, habitat features, and presence of surface water features (springs, streams, and wetlands);
- d) an explanation of how existing facilities and disturbances have been incorporated into the project;
- e) an explanation of mitigation measures the proponent will undertake to prevent contamination of surface water bodies from leaks and spills; and
- f) a description of any feedback on the proposed development as a result of discussions with the Battle Lake Watershed Synergy Group and/or the Battle Lake Preservation Society.

The AER expects that any new disturbance will be limited to the minimum area feasible and that cleanup, regrading, and establishment of natural cover similar to predisturbance conditions on unused portions of rights-of-way and lease sites will occur as soon as possible following construction.

#### **8.2.4 Non-Tier 1 Areas**

The Battle Lake pilot project also addressed facility application considerations for other parts of the watershed, including the adoption of recommended practices for areas not designated as Tier 1. Proposed surface facility development within Battle Lake Tier 2 (undisturbed and forested lands) and Tier 3 (lands disturbed by agricultural, residential, or other industrial development) areas may continue to be filed in the routine application stream, provided that the application meets all *Directive 056* requirements for such applications.

### **8.3 Sour Gas Planning and Proliferation Application Requirements**

Effective June 30, 2008, all applicants are required to follow the *Recommended Practices for Sour Gas Development Planning and Proliferation Assessment (May 2004)*<sup>1</sup> (*Recommended Practices*) when proposing sour gas development (i.e., facilities, pipelines, and wells) in areas where residents are located within the emergency planning zone (EPZ).

#### **8.3.1 Background**

In December 2000, the Provincial Advisory Committee on Public Safety and Sour Gas produced a final report that contained 87 recommendations for addressing public safety and sour gas. In Recommendations 7, 32, and 33, the committee noted that a greater effort was required to reduce the proliferation of sour facilities near people and that more information regarding future development plans should be provided to people near sour gas developments as part of the ERCB's application and licensing process. In response to these recommendations, an Oversight Committee consisting of public, industry, and regulatory participants monitored sour gas development applications over a two-year trial period to determine if the *Recommended Practices* would be effective in responding to Recommendations 7, 32, and 33.

In its *Final Report—Outcomes and Recommendations from the Oversight Committee to the ERCB*, the Oversight Committee noted that when the *Recommended Practices* were followed, the effect was consistent with the intent of Recommendations 7, 32, and 33 and that the *Recommended Practices* were an effective approach to developing and maintaining good relations with the public.

However, because industry participation during the two-year trial was less than expected, the Oversight Committee subsequently recommended that a requirement to follow the *Recommended Practices* was necessary to meet Recommendations 7, 32, and 33.

#### **8.3.2 Application Requirements for Sour Gas Development**

Applicants must meet the following additional application requirements when preparing applications for sour gas development near people.

- 5) Prior to the submission of an application, the applicant must follow the *Recommended Practices* when planning sour gas development in areas where there will be residents located within the calculated EPZ. As a minimum, the applicant must
  - a) conduct an assessment of any existing facility or pipeline to determine if it can be used;

---

<sup>1</sup> The *Recommended Practices* were released under the auspices of the Canadian Association of Petroleum Producers (CAPP), the Canadian Association of Petroleum Landmen (CAPL), and the Small Explorers and Producers Association of Canada (SEPAC).

- b) expand the project-specific information package requirements of section 2.2.2 to include
  - a detailed description of the full project, including future wells, pipelines, and facilities,
  - the results of the applicant's assessment for the use of existing infrastructure,
  - a map that illustrates the assessment area, including proposed wells, pipelines, and/or facilities, existing land use (e.g., roads, residences), and existing infrastructure investigated, and
  - the anticipated timing for the project from the licensing stage through to production operations; and
- c) meet all participant involvement requirements set out in section 2, ensuring the program includes the radius recommended by tables 5.1, 6.1, and 7.1.

6) An applicant that is required to conduct an assessment of the existing infrastructure must

- a) review all existing sour gas facilities and sour gas pipelines within a 15 km radius of the proposed facility;
- b) evaluate the feasibility of upgrading an existing facility and of forging commercial partnerships with existing licensees (for example, contact area operators for information required to conduct the assessment: operating pressure, available capacity, H<sub>2</sub>S limitations, future production potential for the area); and
- c) document the evaluation for application and audit purposes.

### 8.3.3 Addressing Concerns/Objections

If concerns or objections have been expressed and a nonroutine-participant involvement application will be submitted, the applicant is subject to the following additional requirements specific to sour gas planning and development.

7) If there are residents located in the calculated EPZ and unresolved concerns or objections exist, the applicant must

- a) submit a nonroutine-participant involvement application that includes documentation to demonstrate that the requirements of section 8.3.2 were met; and
- b) consider preparing an area development plan, as set out in the *Recommended Practices*.
  - i) If an area development plan has been developed, the applicant must distribute a copy to all landowners, residents, and local authorities in the consultation/notification radius indicated in tables 5.1, 6.1, and 7.1, and have the information available upon request from other interested parties.

In some circumstances the AER may request that an area development plan be prepared in accordance with the *Recommended Practices* for distribution prior to submitting or during the processing of the application.

- 8) An applicant proposing sour gas development where there are residents located in the EPZ and about which unresolved concerns or objections exist may be required to submit all applications associated with the proposed sour gas project (i.e., wells, facilities, and/or pipelines) at the AER's request.

#### **8.3.4 Routine Submission**

If there are no unresolved concerns or objections, the applicant may file a routine application with a cover letter indicating that no concerns or objections exist and that the

application meets the requirements of the *Recommended Practices*. Applicants of routine submissions are not required to attach the documentation that demonstrates they met *Recommended Practices* with their routine application, but must retain the documentation for audit review purposes.

In those cases where there are one or more surface developments within the EPZ but none of those surface developments is a residence, the *Recommended Practices* would not apply. A cover letter must be submitted identifying the type of surface development(s) and confirming that section 8.3 of this directive does not apply.

#### **8.3.5 Audit and Enforcement**

The audit review process will ensure that the sour gas development requirements summarized in section 8.3.2 were fulfilled prior to the submission of the application. The AER will review nonroutine-participant involvement applications for compliance during the processing of the application. Nonroutine-technical and routine submissions will be subject to the existing audit selection and review processes. For any noncompliant applications, the AER will take enforcement action in accordance with *Directive 019: Compliance Assurance*.

### **8.4 Peace River Area Application Requirements**

#### **8.4.1 Background**

In January 2014, a panel of AER hearing commissioners conducted an inquiry on odours and emissions from heavy oil operations in the Peace River area of Alberta. On March 31, 2014, the panel released *Decision 2014 ABAER 005: Report of Recommendations on Odours and Emissions in the Peace River Area*. The AER accepted all of the panel's recommendations within its jurisdiction. Among the commitments that the AER made in its response to the report were to require

- existing heavy oil and bitumen operations in the Peace River area to capture and flare, incinerate, or conserve all casing gas and tank-top gas; and
- new heavy oil and bitumen operations in the Peace River area to capture and flare, incinerate, or conserve all casing gas and tank-top gas effective May 15, 2014.

Licencees of existing operations and applicants for new developments in the Peace River area will need to demonstrate that their projects meet these requirements when submitting facility licence applications under *Directive 056*.

#### 8.4.2 Peace River Area Definition

The Peace River area covers the Three Creeks, Reno, Seal Lake, and Walrus areas (see figure 8.2).

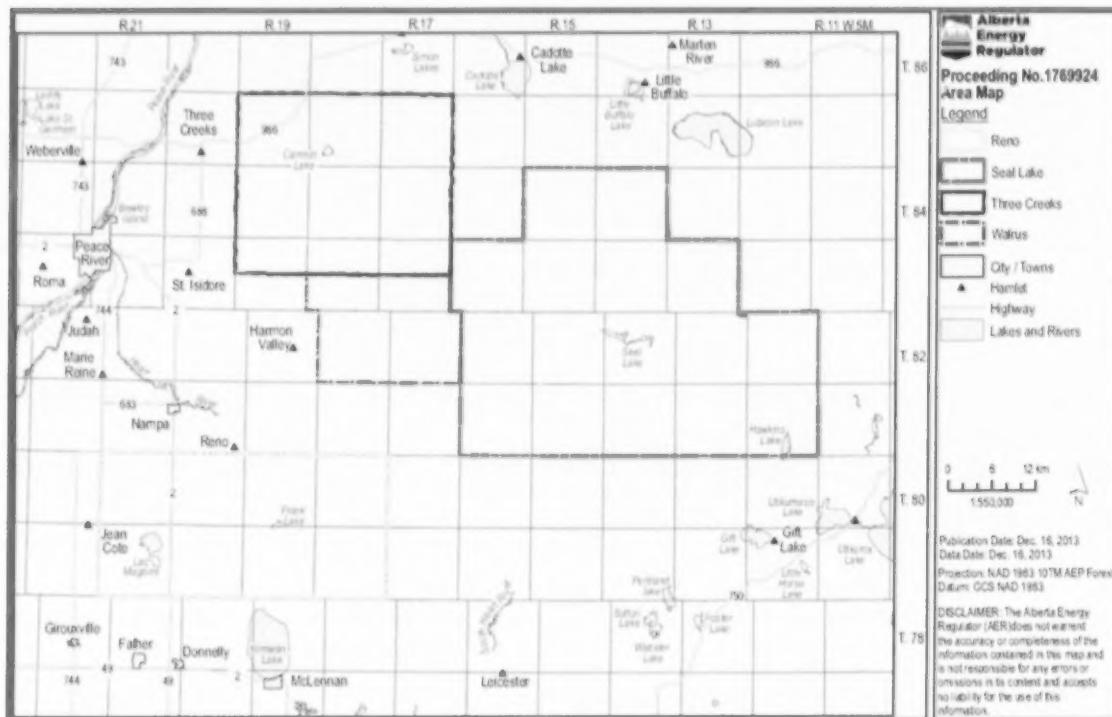

Figure 8.2. Peace River area

#### 8.4.3 Application Requirements for the Peace River Area

- 9) Effective May 15, 2014, applicants for new heavy oil and bitumen operations in the Peace River area must submit documentation with their facility licence application that includes
  - a) a process flow diagram that shows that all casing gas and tank-top gas will be captured and flared, incinerated, or conserved;
  - b) a recording of 0 for the total continuous venting rate on Schedule 2;
  - c) details on Schedule 2.4 for any compressor associated with the vapour recovery unit regardless of its size; and
  - d) any other information requested by the AER.

If there are no unresolved concerns or objections, a routine application may be submitted provided that all other applicable requirements have been met.

- 10) In order to be compliant with section 8.7.3 of the May 2014 edition of *Directive 060: Upstream Petroleum Industry Flaring, Incinerating, and Venting*, licensees of existing heavy oil and bitumen facilities in the Peace River area that are currently venting casing gas or tank-top gas must submit a *Directive 056* amendment application in sufficient time to allow for approval of the amendment and installation

of any required equipment by August 15, 2014. This application must contain the same information required under section 8.4.3 of *Directive 056* for new heavy oil and bitumen operations licence applications.

Heavy oil and bitumen operations in the Peace River area that are exempt from *Directive 056* licensing must still meet the Peace River-area requirements in section 8.7.3 of *Directive 060* for the capture and flaring, incinerating, or conserving of all casing gas and tank-top gas.

## Appendix 1 Summary of Revisions

The table below provides a summary of the key revisions in the September 2011 edition of *Directive 056*.

Section	Revisions
General Comments	This edition includes updates required by the release of new and revised directives and other documents, consolidates frequently asked questions, and provides clarification.
Section 2: Participant Involvement	<ul style="list-style-type: none"> <li>- Updated paragraph on First Nations consultation (Section 2.1)</li> <li>- Added reference to ERCB Community and Aboriginal Relations staff (Section 2.2)</li> <li>- Removed reference to "special needs" (Section 2.2.1, requirement 4)</li> <li>- Revised description of inclusion of persons outside of radius (Section 2.2.1, requirement 4)</li> <li>- Added reference to synergy groups and removed reference to directly and adversely affected (Section 2.2.1, requirement 6)</li> <li>- Updated paragraph on information packages and added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Section 2.2.2, requirement 13)</li> <li>- Added example to details included in project-specific information package (Section 2.2.2, requirement 16(h))</li> <li>- Removed reference to "participants' location" and "inside or outside EPZ" (Section 2.2.2, requirement 16(o))</li> <li>- Added reference to all current EnerFAQs (Section 2.2.2, requirement 16(q) and Section 2.3.2, requirement 36)</li> <li>- Removed reference to "directly and adversely affected" (Section 2.3.1)</li> <li>- Added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Section 2.3.1, requirement 26)</li> <li>- Clarified confirmation of nonobjection (Section 2.3.1, requirement 30)</li> <li>- Clarified notification to Crown disposition holders (Section 2.3.2, requirement 33)</li> <li>- Added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Section 2.3.2, requirement 36)</li> <li>- Clarified notification requirements (Section 2.3.2, requirement 37)</li> <li>- Clarified project status updates (Section 2.5, requirement 54)</li> </ul>
Section 3: Energy Development Licence Applications	<ul style="list-style-type: none"> <li>- Removed references to emergency response planning, open-hole logging waivers, and drill cuttings waivers (Section 3.2.2)</li> <li>- Clarified requirement to obtain licence prior to site preparation, construction, or operation (Section 3.3)</li> <li>- Clarified licence and audit submission procedures (Section 3.4)</li> <li>- Added reference to ERCB's hearing process (Section 3.8)</li> </ul>
Section 4: Application Audit Process	<ul style="list-style-type: none"> <li>- Added comment respecting application compliance (Section 4.1)</li> <li>- Revised Table 4.1 by removing failure to identify the correct terminating formation and failure to identify the correct head lessor</li> </ul>
Section 5: Facility Licence Applications	<ul style="list-style-type: none"> <li>- Updated Licence Expiry and added Licence Extensions (Sections 5.3 and 5.3.1)</li> <li>- Removed references to PAZ (Table 5.1)</li> <li>- Clarified participant involvement requirements for surface facilities within the ERCB-approved in situ oil sands project area (Section 5.5.2.2)</li> <li>- Updated Oilfield Waste Management Facilities (Section 5.5.2.3)</li> <li>- Clarified licensing requirements for adding one compressor less than 75 kW (Sections 5.5.3 and 5.9.8, requirement 48)</li> <li>- Updated Tables 5.2 and 5.3 to allow an increase or decrease in sulphur recovery efficiency for an acid gas injection facility</li> <li>- Added reference to all current EnerFAQs (Section 5.8)</li> <li>- Added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Section 5.8, requirement 19 and Section 5.10.2.3, requirement 81)</li> <li>- Clarified industry notification (Section 5.8, requirement 21)</li> <li>- Updated emergency response planning (Section 5.9.1)</li> <li>- Updated licensing of generators (Section 5.9.8, requirement 49)</li> </ul>

(continued)

	<ul style="list-style-type: none"> <li>- Added reference to <i>ID 91-03</i> (Section 5.9.10)</li> <li>- Changed process to permit the submission of a routine application for a facility located within the Eastern Slopes and added audit requirements (Sections 5.9.16 and 5.10.6.12, Tables 5.6 and 5.7)</li> <li>- Moved requirement for an oil analysis from Design Criteria to Equipment Spacing (Sections 5.10.5 and 5.10.6.1, Table 5.6)</li> <li>- Clarified facilities requiring AENV approval (Section 5.10.6.9)</li> <li>- Added a requirement to include distance from project to land and residence of participants with outstanding concerns (Table 5.7)</li> </ul>
Schedule 2: Facility Licence Application	<ul style="list-style-type: none"> <li>- Clarified question 1 to include confirmation of nonobjection (Section 5.14.1, Step 2)</li> <li>- Added a requirement to include distance from project to land and residence of participants with outstanding concerns (Section 5.14.1, Step 2)</li> <li>- Clarified how applicants are to answer questions 3a and 3b (Section 5.14.1, Step 2)</li> <li>- Clarified maximum H<sub>2</sub>S content of inlet gas (Section 5.14.1, Step 4)</li> <li>- Clarified licensing requirements for adding one compressor less than 75 kW (Section 5.14.1, Step 4)</li> <li>- Added "or acid gas injection facility" to increase or decrease in sulphur recovery efficiency (Section 5.14.1, Step 4)</li> <li>- Clarified NOx and CO<sub>2</sub> emissions (Section 5.14.1, Step 5)</li> <li>- Removed references to <i>IL 93-09</i> (Section 5.14.1, Step 6)</li> </ul>
Schedule 2.1: Working Interest Participants - Facilities	<ul style="list-style-type: none"> <li>- Added requirements for partnerships (Section 5.14.2, Step 2)</li> </ul>
Schedule 2.3: H <sub>2</sub> S Information—Facilities	<ul style="list-style-type: none"> <li>- Clarified maximum H<sub>2</sub>S content of inlet gas (Section 5.14.4, Step 2)</li> </ul>
Schedule 2.4: Compressors/Pumps - Facilities	<ul style="list-style-type: none"> <li>- Clarified licensing requirements for adding one compressor less than 75 kW (Sections 5.14.5 and 5.14.5, Step 2)</li> </ul>
Section 6: Pipeline Licence Applications	<ul style="list-style-type: none"> <li>- Replaced reference to Appendix 5 with reference to <i>Directive 077</i> (Sections 6.1, 6.5.2, and 6.9.11)</li> <li>- Clarified licence expiry (Section 6.3.1)</li> <li>- Added Licence Extensions (Section 6.3.2)</li> <li>- Clarified participant involvement requirements for pipelines within the ERCB-approved in situ oil sands project area (Section 6.4)</li> <li>- Removed references to partial pressure, gas free, and PAZ (Tables 6.1 and 6.2)</li> <li>- Added references to non-sour service and sour service (Table 6.1)</li> <li>- Added footnote regarding sour service (Table 6.1)</li> <li>- Removed reference to nonroutine application for complete removals and added audit requirements (Tables 6.2, 6.4, and 6.5, Sections 6.9.9 and 6.10.5)</li> <li>- Added reference to liner removal (Table 6.2 and Section 6.7, requirement 12, and Section 6.9.19)</li> <li>- Added "or of a higher grade" to pipeline replacement (Sections 6.5.2 and 6.9.10)</li> <li>- Added reference to all current EnerFAQs (Section 6.8, requirement 15)</li> <li>- Added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Section 6.8 requirement 15 and Section 6.10.2.3, requirement 85)</li> <li>- Clarified industry notification (Section 6.8, requirement 17)</li> <li>- Updated emergency response planning (Section 6.9.1)</li> <li>- Clarified requirements for steam distribution pipelines (Sections 6.9.4 and 6.11.2.6, Table 6.4)</li> <li>- Updated partial pipeline removals (Section 6.9.7)</li> <li>- Clarified requirements for Category C surface pipelines (Section 6.9.11, requirement 37, and Table 6.5)</li> <li>- Updated requirements for base plan maps (Section 6.9.14.1)</li> </ul>

(continued)

	<ul style="list-style-type: none"> <li>- Added requirements for right-of-way plans (Section 6.9.14.2)</li> <li>- Clarified licensing process for substance change (Section 6.9.17)</li> <li>- Clarified requirements for connecting pipelines with different substances (Section 6.9.18)</li> <li>- Revised sour service definition (Section 6.9.20)</li> <li>- Clarified requirements for pipelines transporting CO<sub>2</sub> (Section 6.9.22 and Table 6.5)</li> <li>- Clarified requirements for stainless steel pipelines (Section 6.9.23)</li> <li>- Clarified pipeline installation requirements (Section 6.9.26)</li> <li>- Changed process to permit the submission of a routine application for a pipeline located within the Eastern Slopes and added audit requirements (Sections 6.9.29 and 6.11.6.3, Tables 6.4 and 6.5)</li> <li>- Clarified conservation and reclamation requirements (Section 6.9.30)</li> <li>- Clarified confirmation of nonobjection (Section 6.10.2.4, requirement 86(b))</li> <li>- Added a requirement to include distance from project to land and residence of participants with outstanding concerns (Table 6.5)</li> <li>- Clarified requirements for a change in substance to HVP (Table 6.5)</li> </ul>
Schedule 3: Pipeline Licence Application	<ul style="list-style-type: none"> <li>- Clarified question 1 to include confirmation of nonobjection (Section 6.12.1, Step 2)</li> <li>- Added a requirement to include distance from project to land and residence of participants with outstanding concerns (Section 6.12.1, Step 2)</li> <li>- Removed reference to partial removal (Section 6.12.1, Step 5)</li> <li>- Removed requirement to submit documentation with removal application (Section 6.12.1, Step 5)</li> </ul>
Schedule 3.1: Segment/Installation Identification	<ul style="list-style-type: none"> <li>- Removed reference to "in the gaseous phase" for H<sub>2</sub>S content (Section 6.12.2, Step 2)</li> <li>- Revised partial pressure from two decimal places to one (Section 6.12.2, Step 2)</li> </ul>
Schedule 3.2: Technical/Environmental Information	<ul style="list-style-type: none"> <li>- Revised partial pressure from two decimal places to one (Section 6.12.3, Step 2)</li> <li>- Clarified requirements for Category C surface pipelines (Section 6.12.3, Step 2)</li> <li>- Clarified requirements for CO<sub>2</sub> pipelines (Section 6.12.3, Step 2)</li> <li>- Clarified requirements for a change in substance to HVP (Section 6.12.3, Step 4)</li> <li>- Removed reference to <i>IL 93-09</i> (Section 6.12.3, Step 6)</li> </ul>
Section 7: Well Licence Applications	<ul style="list-style-type: none"> <li>- Added licence extensions (Section 7.3.1)</li> <li>- Clarified participant involvement requirements for wells within the ERCB-approved in situ oil sands project area (Section 7.4)</li> <li>- Clarified requirements for cavern scheme wells (Section 7.5)</li> <li>- Added oil sands evaluation wells within an approved mine site to exemptions (Section 7.6)</li> <li>- Removed references to PAZ (Table 7.1)</li> <li>- Clarified approvals for abandoned well remediation (Section 7.6.1)</li> <li>- Clarified licence amendments for deepening a well while on hole (Section 7.8, requirement 14)</li> <li>- Clarified requirements for submitting a re-entry/resumption application (Section 7.9, requirement 17 and 18)</li> <li>- Clarified participant involvement requirements with regard to setbacks (Section 7.10, requirement 20)</li> <li>- Added reference to all current EnerFAQs (Section 7.10)</li> <li>- Added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Section 7.10, requirement 22, Section 7.11.12.4, requirement 56 and Section 7.12.2.2, requirement 96)</li> <li>- Updated survey requirements (Section 7.11.1)</li> <li>- Updated emergency response planning requirements (Section 7.11.2)</li> <li>- Clarified casing testing requirements (Section 7.11.4)</li> <li>- Clarified terminating formation (Section 7.11.5)</li> </ul>

(continued)

	<ul style="list-style-type: none"> <li>- Replaced references to usable aquifers with nonsaline aquifers and references to <i>Directive 008</i> with Section 6.080 of the <i>OGCR</i> and <i>Directive 020</i> (Section 7.11.9)</li> <li>- Updated surface casing requirements (Sections 7.11.10 and 7.12.7.2, Tables 7.6 and 7.7)</li> <li>- Clarified requirements for development near water bodies (Sections 7.11.12.1 and 7.12.11.1, Table 7.6)</li> <li>- Removed reference to private access road (Section 7.11.12.2, requirement 50)</li> <li>- Clarified requirements for lease/access roads and private access roads (Section 7.11.12.3)</li> <li>- Clarified requirements for drilling in proximity to coal mines (Sections 7.11.12.5 and 7.12.11.2, Table 7.6)</li> <li>- Changed process to permit the submission of a routine application for a well located within the Eastern Slopes and added reference to submitting audit documentation (Sections 7.11.13 and 7.12.11.3, Tables 7.6 and 7.7)</li> <li>- Removed all references to "prospective" (Sections 7.11.15 and 7.13.1, Table 7.6)</li> <li>- Added "all formations up to and included in the 15 m overhole interval" (Section 7.11.15, requirement 65)</li> <li>- Removed reference to "individual with demonstrated capability in H<sub>2</sub>S release rate assessments" (Section 7.11.15, requirement 68)</li> <li>- Added "hydrocarbon" (Section 7.11.15.1, requirement 69)</li> <li>- Clarified determining release rates (Section 7.11.15.3, requirement 84)</li> <li>- Clarified release rate scenarios (Section 7.11.15.3)</li> <li>- Added a requirement to include distance from project to land and residence of participants with outstanding concerns (Table 7.7)</li> </ul>
Schedule 4: Well Licence Application	<ul style="list-style-type: none"> <li>- Clarified question 1 to include confirmation of nonobjection (Section 7.14.1, Step 2)</li> <li>- Added a requirement to include distance from project to land and residence of participants with outstanding concerns (Section 7.14.1, Step 2)</li> <li>- Clarified how applicants are to answer question 3 (Section 7.14.1, Step 2)</li> <li>- Clarified projected total depth and true vertical depth (Section 7.14.1, Step 7)</li> <li>- Clarified terminating formation name (Section 7.14.1, Step 7)</li> <li>- Updated surface casing requirements (Section 7.14.1, Step 7)</li> <li>- Clarified surface owner (Section 7.14.1, Step 10)</li> <li>- Removed reference to <i>IL 93-09</i> (Section 7.14.1, Step 11)</li> <li>- Removed table on formation codes and names (formerly Table 7.9) and replaced previous references with references to the ERCB Web site</li> </ul>
Schedule 4.1: Working Interest Participants - Wells	<ul style="list-style-type: none"> <li>- Added requirements for partnerships (Section 7.14.2, Step 2)</li> </ul>
Schedule 4.3: Well H <sub>2</sub> S Information	<ul style="list-style-type: none"> <li>- Clarified how applicants are to answer question 1 (Section 7.14.4, Step 3)</li> </ul>
Section 8: Additional Application Requirements (Special Circumstances)	<ul style="list-style-type: none"> <li>- Clarified requirements for routine submission (Section 8.3.4)</li> </ul>
Appendices	<ul style="list-style-type: none"> <li>- Updated list of references and contacts (Appendix 2)</li> <li>- Removed definitions not used in <i>Directive 056</i> (Appendix 3)</li> <li>- Clarified definitions of critical sour well, emergency response plan, HVP pipeline, local authority, occupant, public notice, release, residence, surface development, terminating formation, urban centre (Appendix 3)</li> <li>- Added definition of energy development, level designation, oil satellite, oilfield waste management facility (Appendix 3)</li> <li>- Removed Checklist for 21-Day Temporary Surface Pipelines (formerly Appendix 5)</li> <li>- Clarified Case 5 (Appendix 8)</li> <li>- Added five new case scenarios (Appendix 9)</li> </ul>

(continued)

	<ul style="list-style-type: none"><li>- Revised list of required EnerFAQs (Appendix 10)</li><li>- Added reference to <i>EnerFAQs No. 15</i> and the form <i>Objecting to an Energy Resource Project</i> (Appendix 10 and Appendix 11)</li><li>- Added reference to ERCB CAR staff (Appendix 11)</li><li>- Removed reference to "special needs" (Appendix 11)</li><li>- Revised description of inclusion of persons outside of radius (Appendix 11)</li><li>- Added reference to cost of publishing notices (Appendix 11)</li></ul>

## **Appendix 3      Definitions for the Purposes of *Directive 056***

<b>Abandoned well</b>	A well that has been drilled, abandoned, cut, and capped at surface.
<b>Abandonment</b>	The permanent dismantlement of a well, pipeline, or facility in the manner prescribed by the regulations; includes any measures required to ensure that the well, pipeline, or facility is left in a permanently safe and secure condition.
<b>Acid gas</b>	Gas that is separated in the treating of solution or nonassociated gas that contains hydrogen sulphide ( $H_2S$ ), totally reduced sulphur compounds, and/or carbon dioxide ( $CO_2$ ).
<b>Applicant/licensee</b>	The company responsible for the accuracy and completeness of the application and all supporting information. Upon licence approval, the applicant becomes the licensee and bears responsibility for the construction and safe operation of the facility, pipeline, or well. The licensee is also responsible for the decommissioning, abandonment, and reclamation of the facility, pipeline, or well.
<b>Battery</b>	See Gas battery, Oil/bitumen battery.
<b>Bitumen</b>	Bitumen may be defined by specific gravity or API units or by the well's location within the designated oil sands areas.
<b>Blending</b>	The combination of similar products with different $H_2S$ contents for the purpose of maintaining a lower $H_2S$ content in the blended stream. Blending of liquids with gases is not permitted for pipelines.
<b>Blowout</b>	A well where there is an unintended flow of wellbore fluids (oil, gas, water, or other substance) at surface that cannot be controlled by existing wellhead and/or blowout prevention equipment, or a well that is flowing from one formation to another formation(s) (underground blowout) that cannot be controlled by increasing the fluid density. Control can only be regained by installing additional and/or replacing existing surface equipment to allow shut-in or to permit the circulation of control fluids, or by drilling a relief well.
<b>Coalbed methane gas</b>	Natural gas that is found in coal.
<b>Coalbed methane well</b>	Any well intended to produce or producing coalbed methane.
<b>Compressor station/site</b>	Service equipment intended to maintain or increase the flowing pressure of the gas that it receives from a well, battery, or gathering system prior to delivery to market or other disposition.
<b>Condensate</b>	A hydrocarbon liquid recovered either from a natural gas well or at some point in the field handling system consisting primarily of pentane and heavier hydrocarbons.
<b>Construction (facilities)</b>	Construction for a facility is deemed to occur when any equipment associated with a licence for the facility is brought to the site or when a ground disturbance required for the facility equipment is initiated.
<b>Consultant</b>	A person or corporation authorized by an applicant to prepare its application. The applicant is still responsible for the accuracy and completeness of the application if filed on its behalf by a consultant.
<b>Confirmation of nonobjection</b>	A statement made by a person that confirms there is no objection to the ERCB granting a licence for the proposed energy development.

<b>Critical sour well</b>	The ERCB designation of a well for drilling purposes with an H <sub>2</sub> S release rate greater than or equal to 2.0 m <sup>3</sup> /second or other wells with a lesser H <sub>2</sub> S release rate in close proximity to an urban centre.
<b>Crown disposition</b>	The administrative and operating conditions assigned for use of public lands in the form of a lease, licence, permit, or letter of authority; administered by Sustainable Resource Development (SRD).
<b>Crown disposition holder</b>	A person or party that has been assigned use of public lands (e.g., lease, licence, or permit) issued under the provisions of the <i>Public Lands Act</i> .
<b>Custom treating plant</b>	A system or arrangement of tanks and other surface equipment receiving oil/water emulsion exclusively by truck for separation prior to delivery to market or other disposition.
<b>Dehydrator</b>	Equipment designed to remove water from raw gas.
<b>Design capacity</b>	The maximum capable throughput of volumes based on the engineering design of all on-site equipment associated with the facility.
<b>Directionally drilled well</b>	A well drilled on an angle from a surface location to a subsurface location some lateral distance away from the surface location of the well.
<b>Drilling spacing unit</b>	<p>The drilling spacing unit for a well is</p> <ul style="list-style-type: none"> <li>a) the surface area of the drilling spacing unit and the subsurface vertically beneath that area, or</li> <li>b) where the drilling spacing unit is prescribed with respect to a specified pool, geological formation, member or zone, the pool, geological formation, member, or zone vertically beneath that area.</li> </ul> <p>The normal drilling spacing unit for an oil well is one quarter section. The normal drilling spacing unit for a gas well is one section. A drilling spacing unit does not include the area of a road allowance.</p>
<b>Emergency planning zone (EPZ)</b>	A geographical area surrounding a well, pipeline or facility containing hazardous product that requires specific emergency response planning by the licensee.
<b>Emergency response plan (ERP)</b>	A comprehensive plan to protect the public, including criteria for assessing an emergency situation and procedures for mobilizing response personnel and agencies and establishing communications and coordination.
<b>Emulsion</b>	A combination of two immiscible liquids or liquids that do not mix together under normal conditions.
<b>Energy development</b>	Any construction or operation of wells, pipelines, or facilities to extract or deliver energy resources.
<b>Expectations</b>	Recommended best practices or guidelines. Enforcement is not assigned to expectations, but they should be given serious consideration.
<b>Environment</b>	All components of the earth, including air, land, and water; all layers of the atmosphere; all organic and inorganic matter and living organisms; and interacting natural systems.

<b>Facility</b>	Any building, structure, installation, equipment, or appurtenance over which the ERCB has jurisdiction and that is connected to or associated with the recovery, development, production, handling, processing, treatment, or disposal of hydrocarbon-based resources or any associated substances or wastes. This does not include wells or pipelines.
<b>Flame-type equipment</b>	Any electric or fired heating equipment using an open flame, electric arc, or element; includes a space heater, torch, heated process vessel, boiler, electric arc, open flame welder, and open element electric heater or appliance.
<b>Gas battery</b>	A system or arrangement of tanks and other surface equipment (including interconnecting piping) that receives the effluent from one or more wells that might provide measurement and separation, compression, dehydration, dew point control, H <sub>2</sub> S scavenger where < 0.1 t/d of sulphur is being treated, line heater or other gas handling functions prior to the delivery to market or other disposition. This does not include gas processing equipment that recovers more than 2 m <sup>3</sup> /d of liquids or processes more than 0.1 t/d of sulphur.
<b>Gas fractionating plant</b>	An arrangement of equipment to reprocess a natural gas liquid (NGL) inlet for the extraction of liquids.
<b>Gas processing</b>	The changing of the composition of raw natural gas either at processing facilities at the gas field or at straddle plants located on pipeline systems.
<b>Gas processing plant</b>	A system or arrangement of equipment used for the extraction of hydrogen sulphide, helium, ethane, natural gas liquids, or other substances from raw gas; does not include a wellhead separator, treater, dehydrator, or production facility that recovers < 2 m <sup>3</sup> /day of hydrocarbon liquids without using a liquid extraction process (e.g., refrigeration, desiccant). In addition, does not include an arrangement of equipment that removes small amounts of sulphur (< 0.1 tonnes/day) through the use of nonregenerative scavenging chemicals that generate no hydrogen sulphide or sulphur dioxide.
<b>Gas well</b>	A well that produces primarily gas from a pool or portion of a pool wherein the hydrocarbon system is gaseous or exhibits a dew point reduction of pressure, or any well so designated by the ERCB.
<b>Hand delivered</b>	Delivering documents directly to a participant at their place of residence or place of business.
<b>High vapour pressure (HVP) pipeline</b>	A pipeline system conveying hydrocarbons or hydrocarbon mixtures in the liquid or quasi-liquid state with a vapour pressure greater than 110 kPa absolute at 38°C, as determined using the Reid method (see ASTM D323). Some examples are liquid ethane, ethylene, propane, butanes, and pentanes plus.
<b>Hydrogen sulphide (H<sub>2</sub>S)</b>	A naturally occurring gas found in a variety of geological formations and also formed by the natural decomposition of organic matter in the absence of oxygen. H <sub>2</sub> S is colourless, has a molecular weight that is heavier than air, and is extremely toxic. In small concentrations it has a rotten egg smell and causes eye and throat irritation.

<b>Injection/disposal facility</b>	A system or arrangement of surface equipment associated with the injection or disposal of any substance through one or more wells for the purpose of water disposal or enhanced oil recovery (EOR).
<b>Landowner</b>	The person in whose name a certificate of title has been issued pursuant to the <i>Land Titles Act</i> , or if no certificate of title has been issued, the Crown or other body administering the land.
	In the case of Métis land, the person registered in the Métis Settlements Land Registry as owner of the Métis title pursuant to the <i>Métis Settlements Land Registry Regulation</i> .
<b>Large diameter/high pressure hydrocarbon pipeline</b>	A hydrocarbon pipeline with both an outside diameter equal to or greater than 323.9 mm and a maximum operating pressure equal to or greater than 3475 kPa.
<b>Level designation</b>	A designation that stipulates different separation or setback distances for wells, pipelines, and facilities for land-use and public safety purposes, as described in <i>ID 81-03</i> and <i>ID 97-06</i> .
<b>Licensee</b>	The holder of a facility, pipeline, or well licence according to the records of the ERCB; includes a trustee or receiver-manager of property of a licensee (also see <b>Applicant</b> ).
<b>Line heater</b>	Equipment installed at either the well site lease or along a pipeline right-of-way to prevent the formation of gas hydrates.
<b>Liner</b>	A tubular product that is inserted into buried pipelines to form a corrosion-resistant barrier or separate free-standing pressure-containing pipe.
<b>Local authority</b>	Council of a city, town, village, or municipal district, or in the case of an improvement district or special area, the Minister of Municipal Affairs, the council of a settlement under the <i>Métis Settlements Act</i> , or the band council of a First Nations reserve.
<b>Location exemption code (LE)</b>	A code that identifies cases when there is more than one wellbore or facility on the smallest land area described by the Dominion Land Survey system.
<b>Lost circulation</b>	The loss of drilling fluids from the wellbore into permeable formations penetrated during drilling of the well.
<b>Minimum information requirements</b>	The project-specific details that an applicant must provide to all parties in accordance with the participant involvement guidelines.
<b>Multiwell facility</b>	A battery (oil, gas, or bitumen) or satellite handling the production from multiple zones being produced in segregation from one wellbore; inlets for more than one well are located and being produced at a battery or satellite at one surface location; multiple single-well batteries or satellites are operated within one surface lease.
<b>Nonobjection</b>	The party has been personally consulted or notified of the project, has fully understood the details, has no outstanding concerns or objections, and does not oppose the ERCB issuing a licence for the proposed energy development.
<b>Nonroutine</b>	An application is nonroutine if the applicant cannot meet requirements or chooses to apply for a regulatory relaxation; all participant involvement requirements have not been met; outstanding concerns/objections exist; the applicant proposes to implement new technology; the application is designated nonroutine (i.e., a new Category C or D plant, any Category E application).

<b>Notification</b>	The distribution of project-specific information to participants.
<b>Occupant</b>	A person other than the owner who is in actual possession of land; a person who is shown on a certificate of title or by contracts as having an interest in the land that confers a right to occupy the land; in the case of Métis land, a person having a right or interest in land recorded on the Métis title register pursuant to the <i>Métis Settlements Land Registry Regulation</i> ; the holder of a permit for a coal mine.
<b>Oil/bitumen battery</b>	A system or arrangement of tanks or other surface equipment or devices receiving the effluent of one or more wells for the purpose of separation and measurement prior to the delivery to market or other disposition.
<b>Oil effluent</b>	Oil, gas, and water in any combination produced from one or more oil wells or recombined oil well fluids that may have been separated in passing through surface facilities.
<b>Oil and gas energy development</b>	Any category type of facility, pipeline, and well requiring licensing under <i>Directive 056</i> .
<b>Oil well</b>	A well that produces primarily liquid hydrocarbons from a pool or a portion of a pool wherein the hydrocarbon system is liquid or exhibits a bubble point on reduction of pressure, or any well so designated by the ERCB.
<b>Oil loading/unloading facility (truck terminal)</b>	A system or arrangement of tanks and other surface equipment receiving crude oil by truck for the purpose of delivering crude oil into a pipeline.
<b>Oil sands scheme approval number</b>	The number assigned an approval of a scheme or operation for the recovery of oil sands or crude bitumen under the <i>Oil Sands Conservation Act</i> .
<b>Oil satellite</b>	An arrangement of surface equipment (not including oil storage tanks) located some distance between a number of wells and the main battery that will receive the effluent and separate and measure the production from each well, after which the fluids are recombined and piped to the main battery for further treatment; water handling equipment may be included.
<b>Oilfield waste</b>	An unwanted substance or mixture of substances generated from the construction, operation, or reclamation of wells, facilities, and pipelines.
<b>Oilfield waste management facility</b>	A facility whose operation is approved by the ERCB. Includes a waste processing facility, a waste storage facility, a waste transfer station, a surface facility associated with a disposal well, a biodegradation facility, an oilfield landfill, a thermal treatment facility, and any other facility for the processing, treatment, storage, disposal or recycling of oilfield waste.
<b>Operator</b>	A person or company that has control of or undertakes the day-to-day operations and activities of a facility, pipeline, or well, whether or not that person is also the licensee for the facility, pipeline, or well.
<b>Partial pressure</b>	The pressure exerted by one component of a natural gas mixture when isolated in a container.
<b>Participant</b>	An organization, community, group, or individual with a stake in the discovery, development, and delivery of Alberta's resources.
<b>Participant involvement</b>	Participant involvement encompasses all aspects of public, industry, and regulator interactions and communications. It means that each organization, community, group, and individual with a stake in the discovery, development, and delivery of Alberta's resources may be a participant.

<b>Perforation</b>	The holes placed through the casing and cement into the formation using a perforation gun or by cutting the casing and cement using sand-laden fluids to expose a formation.
<b>Personal consultation</b>	Consultation through face-to-face visits or telephone conversations with identified parties and providing the required information packages.
<b>Pipeline abandonment</b>	The permanent deactivation of a pipeline, whether it is left in place or removed.
<b>Pipeline base map</b>	The plan produced by the ERCB on a township or smaller geographic area basis that shows pipelines currently licensed under the <i>Pipeline Act</i> .
<b>Pipeline discontinuation</b>	The temporary deactivation of a pipeline or part of a pipeline.
<b>Pipeline installation</b>	Any equipment, apparatus, mechanism, machinery, or instrument incidental to the operation of the pipeline. This includes compressor stations, pump stations, line heaters (Categories C and D), oil loading/unloading facilities, and tank farms associated with pipelines carrying process sales product.
<b>Pipeline leak</b>	The escape of substance from a pipeline.
<b>Pipeline right-of-way plan</b>	A scaled sketch plan of the pipeline right-of-way that includes ATS detail and identifies land ownership, water body crossing, and other directly adjacent or impacted rights-of-way.
<b>Pipeline removal</b>	The removal of an entire pipeline, including crossings of roads, railways, and watercourses.
<b>Primary containment device</b>	A device used to physically contain materials produced, generated, and used by the upstream petroleum industry. Primary containment devices include, but are not limited to, single-walled tanks and containers.
<b>Processing equipment</b>	Equipment used for the extraction of components such as water, H <sub>2</sub> S, and liquids from gas or oil.
<b>Process vessel</b>	A heater, dehydrator, separator, treater, and any vessel used in the processing or treatment of produced gas or oil.
<b>Project</b>	A network of facilities, pipelines, and/or wells that connects to a common facility.
<b>Public facility</b>	A public building, such as a hospital, rural school, or major recreational facility, situated outside of an urban centre that can accommodate more than 50 individuals and/or that requires additional transportation to be provided during an evacuation.
<b>Public notice</b>	In accordance with the ERCB <i>Rules of Practice</i> , the delivery, circulation, or advertising by the ERCB of a notice stating that the ERCB might take action in a proceeding specified in the notice. The cost of advertising public notices is borne by the applicant.
<b>Publicly used development</b>	Places where the presence of 50 individuals or fewer can be anticipated (e.g., places of business, campgrounds, cottages, churches, and other locations created for use by the nonresident public).
<b>Pump station</b>	A system of equipment located at intervals along a main pipeline to maintain flow to the receipt point.
<b>Re-entry</b>	The re-entry of an abandoned wellbore by a company other than the original licence holder.

<b>Refer status</b>	A corporate status indicator activated on the Compliance and Operations Management System (COM) that indicates the licensee's inability or unwillingness to comply with the requirements. This status will be considered by the ERCB when deciding to approve or deny any pending or future applications to the ERCB involving the licensee.
<b>Release</b>	Any unintended discharge of product to the environment from a well, facility, or pipeline.
<b>Requirement</b>	A rule that industry has an obligation to meet and against which the ERCB may take enforcement action in cases of noncompliance.
<b>Residence</b>	A dwelling that is occupied full time or part time.
<b>Resident</b>	A person occupying a residence on a temporary or permanent basis.
<b>Resumption of drilling operations</b>	Re-entry of an existing wellbore by the licensee, whether abandoned or not, for the purpose of deepening, whipstocking, recompleting (abandoned well only), or horizontal recompletion.
<b>Right-of-way</b>	The land upon which a legal right-of-way is granted over another person's property. This right can be acquired by means of an easement or by a right-of-entry order.
<b>Routine application</b>	The applicant meets all requirements, including participant involvement, there are no outstanding public or industry concerns, and regulatory waivers or relaxations are not requested.
<b>Setback distance</b>	The minimum required distance between a well, pipeline, or other facility and land-use development, such as a surface improvement, permanent dwelling, unrestricted country development, urban centre, or public facility.
<b>Solution gas</b>	Gas that is dissolved in solution with produced oil or bitumen.
<b>Stock tank vapours</b>	The small volume of dissolved gas present in storage tanks.
<b>Straddle plant</b>	Surface equipment intended to reprocess marketable gas for the purpose of ethane extraction.
<b>Sulphur emissions</b>	The release of sulphur-containing compounds, including SO <sub>2</sub> , H <sub>2</sub> S, and total reduced sulphur compounds.
<b>Surface development</b>	Dwellings that are occupied full time or part time, publicly used development, public facilities, including campgrounds and places of business, and any other surface development where the public may gather on a regular basis. Includes residences immediately adjacent to the EPZ and those from which dwellers are required to egress through the EPZ.
<b>Surface improvement</b>	A railway, pipeline, canal or other right-of-way, road allowance, surveyed roadway, dwelling, industrial plant, aircraft runway or taxiway, buildings used for military purposes, permanent farm buildings, school, or church.
<b>Suspension</b>	The temporary cessation of operations at a well, pipeline, or facility in the manner prescribed by the regulations or directed by the ERCB; includes any measures required to ensure that the well, pipeline, or facility is left in a safe and secure condition.
<b>Tank</b>	A device designed to contain materials produced, generated, and used by the petroleum industry that is constructed of impervious materials.

<b>Tank farm</b>	A system or arrangement of tanks or other surface equipment associated with the operation of a pipeline and that may include measurement equipment and line heaters, but does not include separation equipment or storage vessels at a battery approved under the <i>Oil and Gas Conservation Act</i> .
<b>Temporary facility or pipeline</b>	A facility or pipeline that will be in use for a period of 12 months or less.
<b>Terminating formation</b>	For the purpose of well licensing, the deepest formation in which the well will terminate and which the applicant has the right to produce for all intended purposes of the well.
<b>Unrestricted country development</b>	Any collection of permanent dwellings situated outside of an urban centre and having more than eight permanent dwellings per quarter section; for the purpose of applying the requirements of ID 97-6, includes any similar development that the ERCB might so designate.
<b>Unsatisfactory event</b>	A contravention of a regulation or requirement.
<b>Urban authority</b>	The administrator of a city, town, new town, village, summer village, or hamlet with not fewer than 50 separate buildings, each of which must be an occupied dwelling, or other incorporated centre.
<b>Urban centre</b>	A city, town, village, summer village, or hamlet with no fewer than 50 separate buildings, each of which must be an occupied dwelling, or any similar development the ERCB may designate as an urban centre.
<b>Water body</b>	Natural or manmade; contains or conveys water continuously, intermittently, or seasonally.  A natural water body is any location where water flows or is present, whether the flow or the presence of water is continuous, seasonal, intermittent, or occurs only during a flood. This includes, but is not limited to, the bed and shore of a river, stream, lake, creek, lagoon, swamp, marsh, slough, muskeg, or other natural drainage, such as ephemeral draws, wetlands, riparian areas, floodplains, fens, bogs, coulees, and rills.  Examples of a manmade water body include, but are not limited to, a canal, drainage ditch, reservoir, dugout, or other manmade surface feature.
<b>Well spacing</b>	The normal drilling spacing unit for a gas well is one section (1 well per 256 hectares); for an oil well it is one quarter section (4 wells per 256 hectares).
<b>Working interest participant</b>	A person who owns a beneficial or legal undivided interest in a well or facility under agreements that pertain to the ownership of that well or facility.

## Appendix 4    Sample Participant Involvement Summary Form

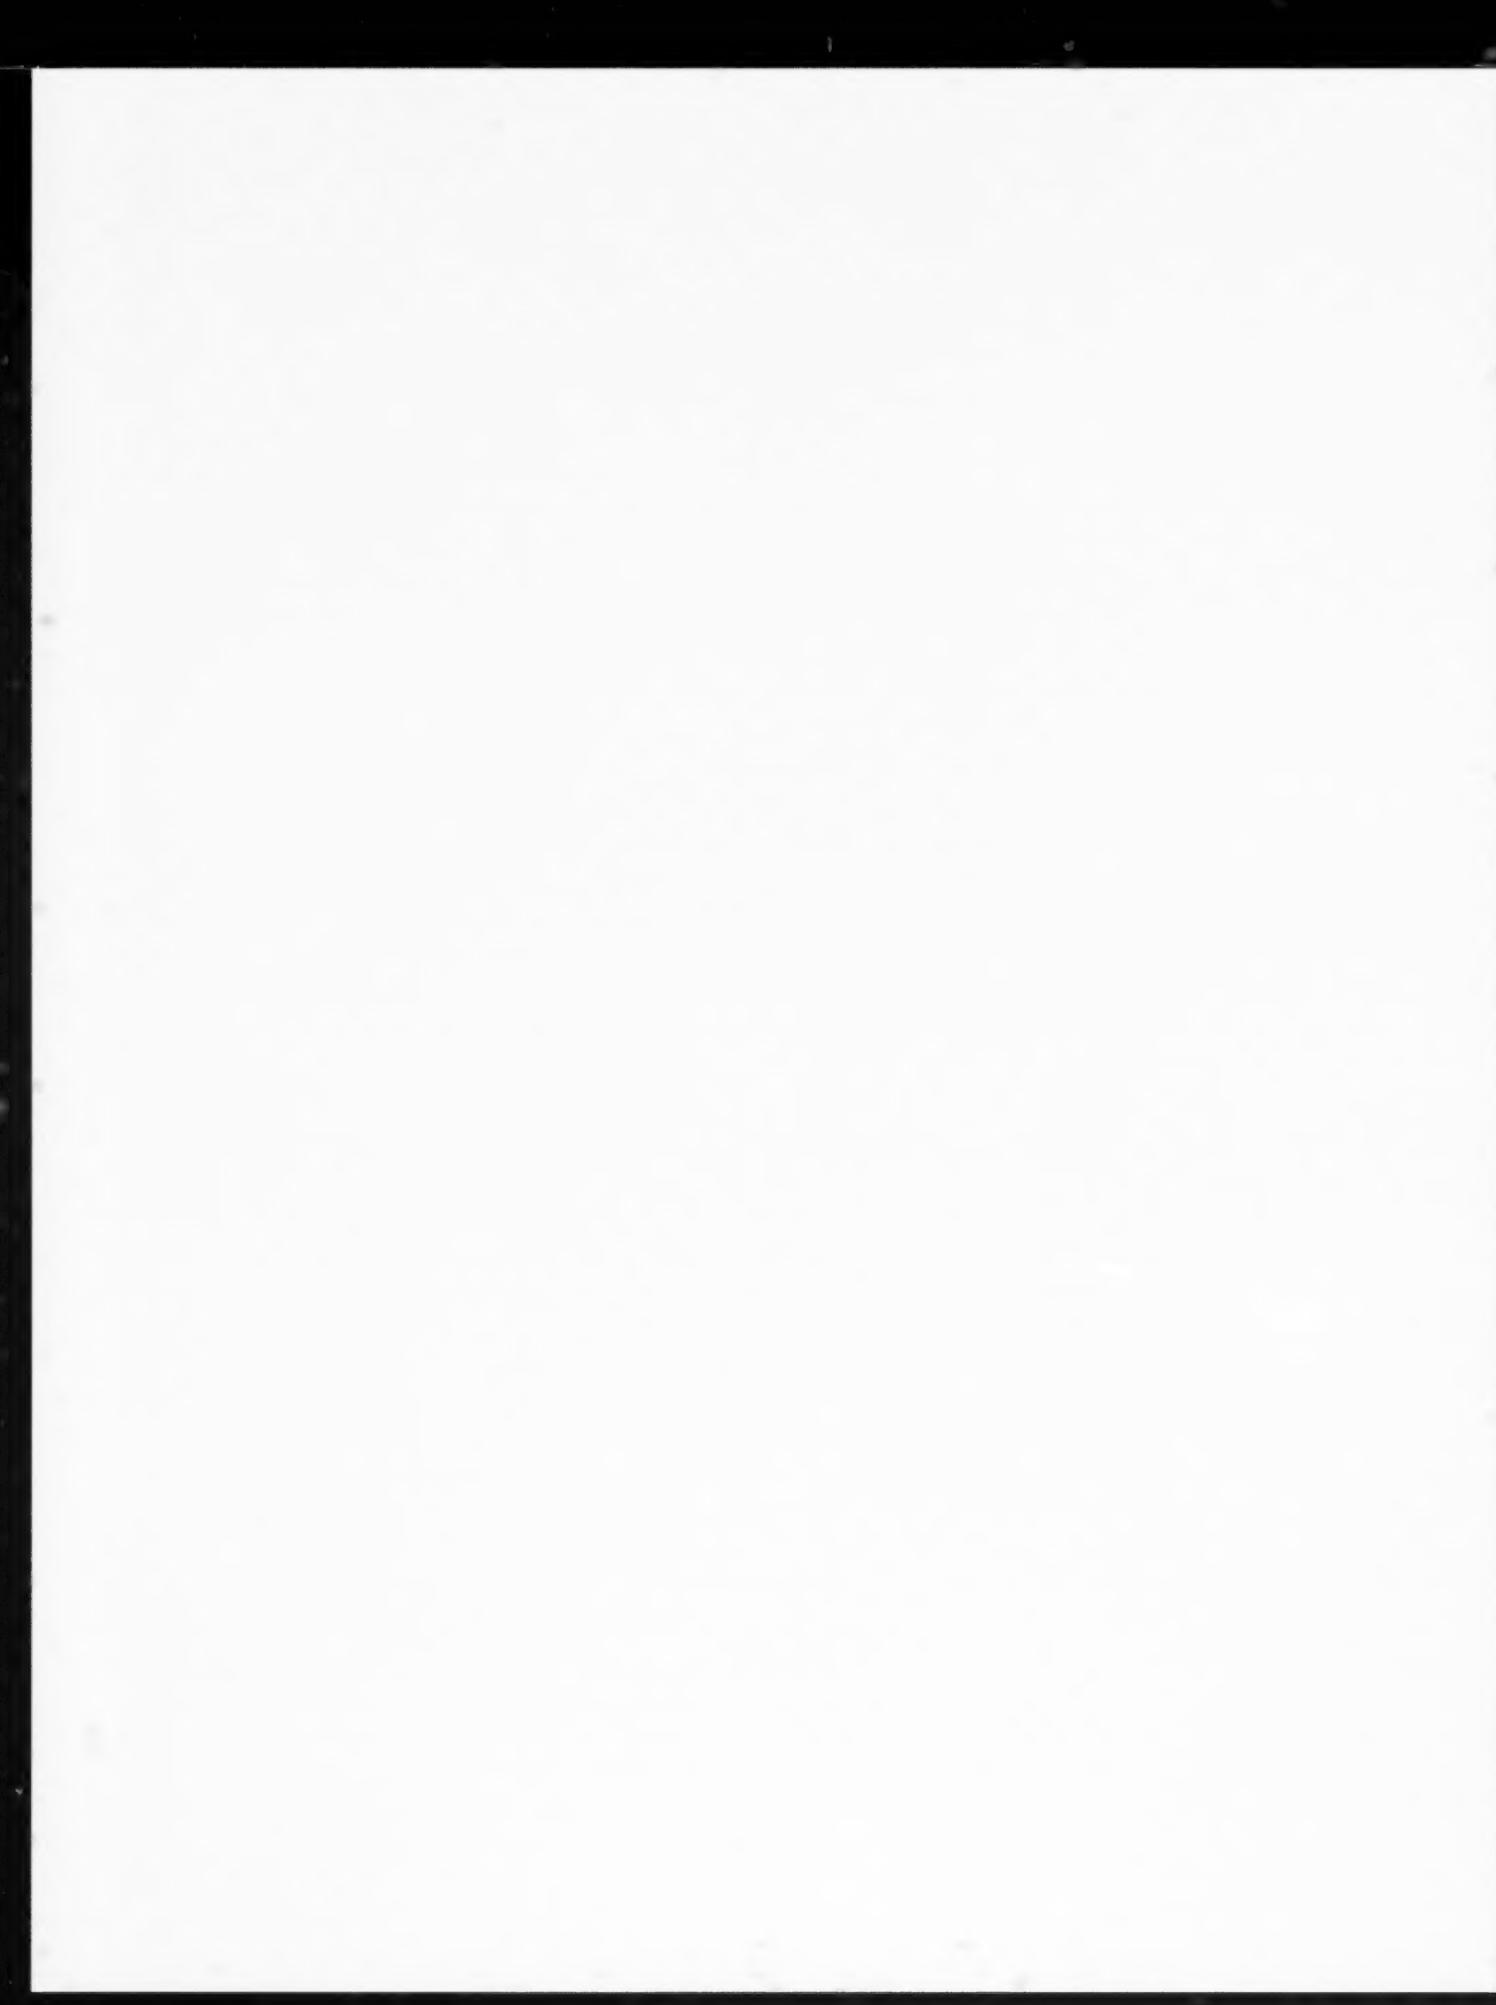

for

(C350) Oil satellite @ 13-4-51-16W6M

(Enter type of application here)

Land location (Qtr-Section-Township-Range-Meridian)	Land interest (e.g., landowner, occupant, resident, local authority)	Name	Date of personal consultation	Date of confirmation of nonobjection	Consultation by phone or meeting	Notification by fax, registered or regular mail	Documents distributed and date of distribution	Date additional EnerFAQs distributed	Comments (see note)
NW 1/4-4-51-16W6M	Landowner	John Doe	Jan. 1, 2011	Jan. 17, 2011	Meeting	Hand delivered	ERCB letter; project description Jan. 1, 2011	None requested	Declined copies of EnerFAQs No. 7 and ERCB brochure
NW 1/4-4-51-16W6M	Crown Disposition Holder TPA #0000	Trapper	Jan. 1, 2011		Phone	Regular mail	ERCB letter; project description; EnerFAQs No. 7; ERCB brochure	None requested	Wait a min. of 14 days prior to submitting application

Note: The comments contained in the participant involvement summary submitted to the ERCB with respect to an application must not contain any information gathered for purposes other than the submission of the application. The comments should assist ERCB staff to verify compliance with participant involvement requirements and to determine where unresolved issues exist. Inclusion of information such as an individual's health issues, opinions of others, and personal information gathered to assist in emergency evacuation should not be included, since this document may become part of the public record.

## Appendix 6 Spacing Diagram

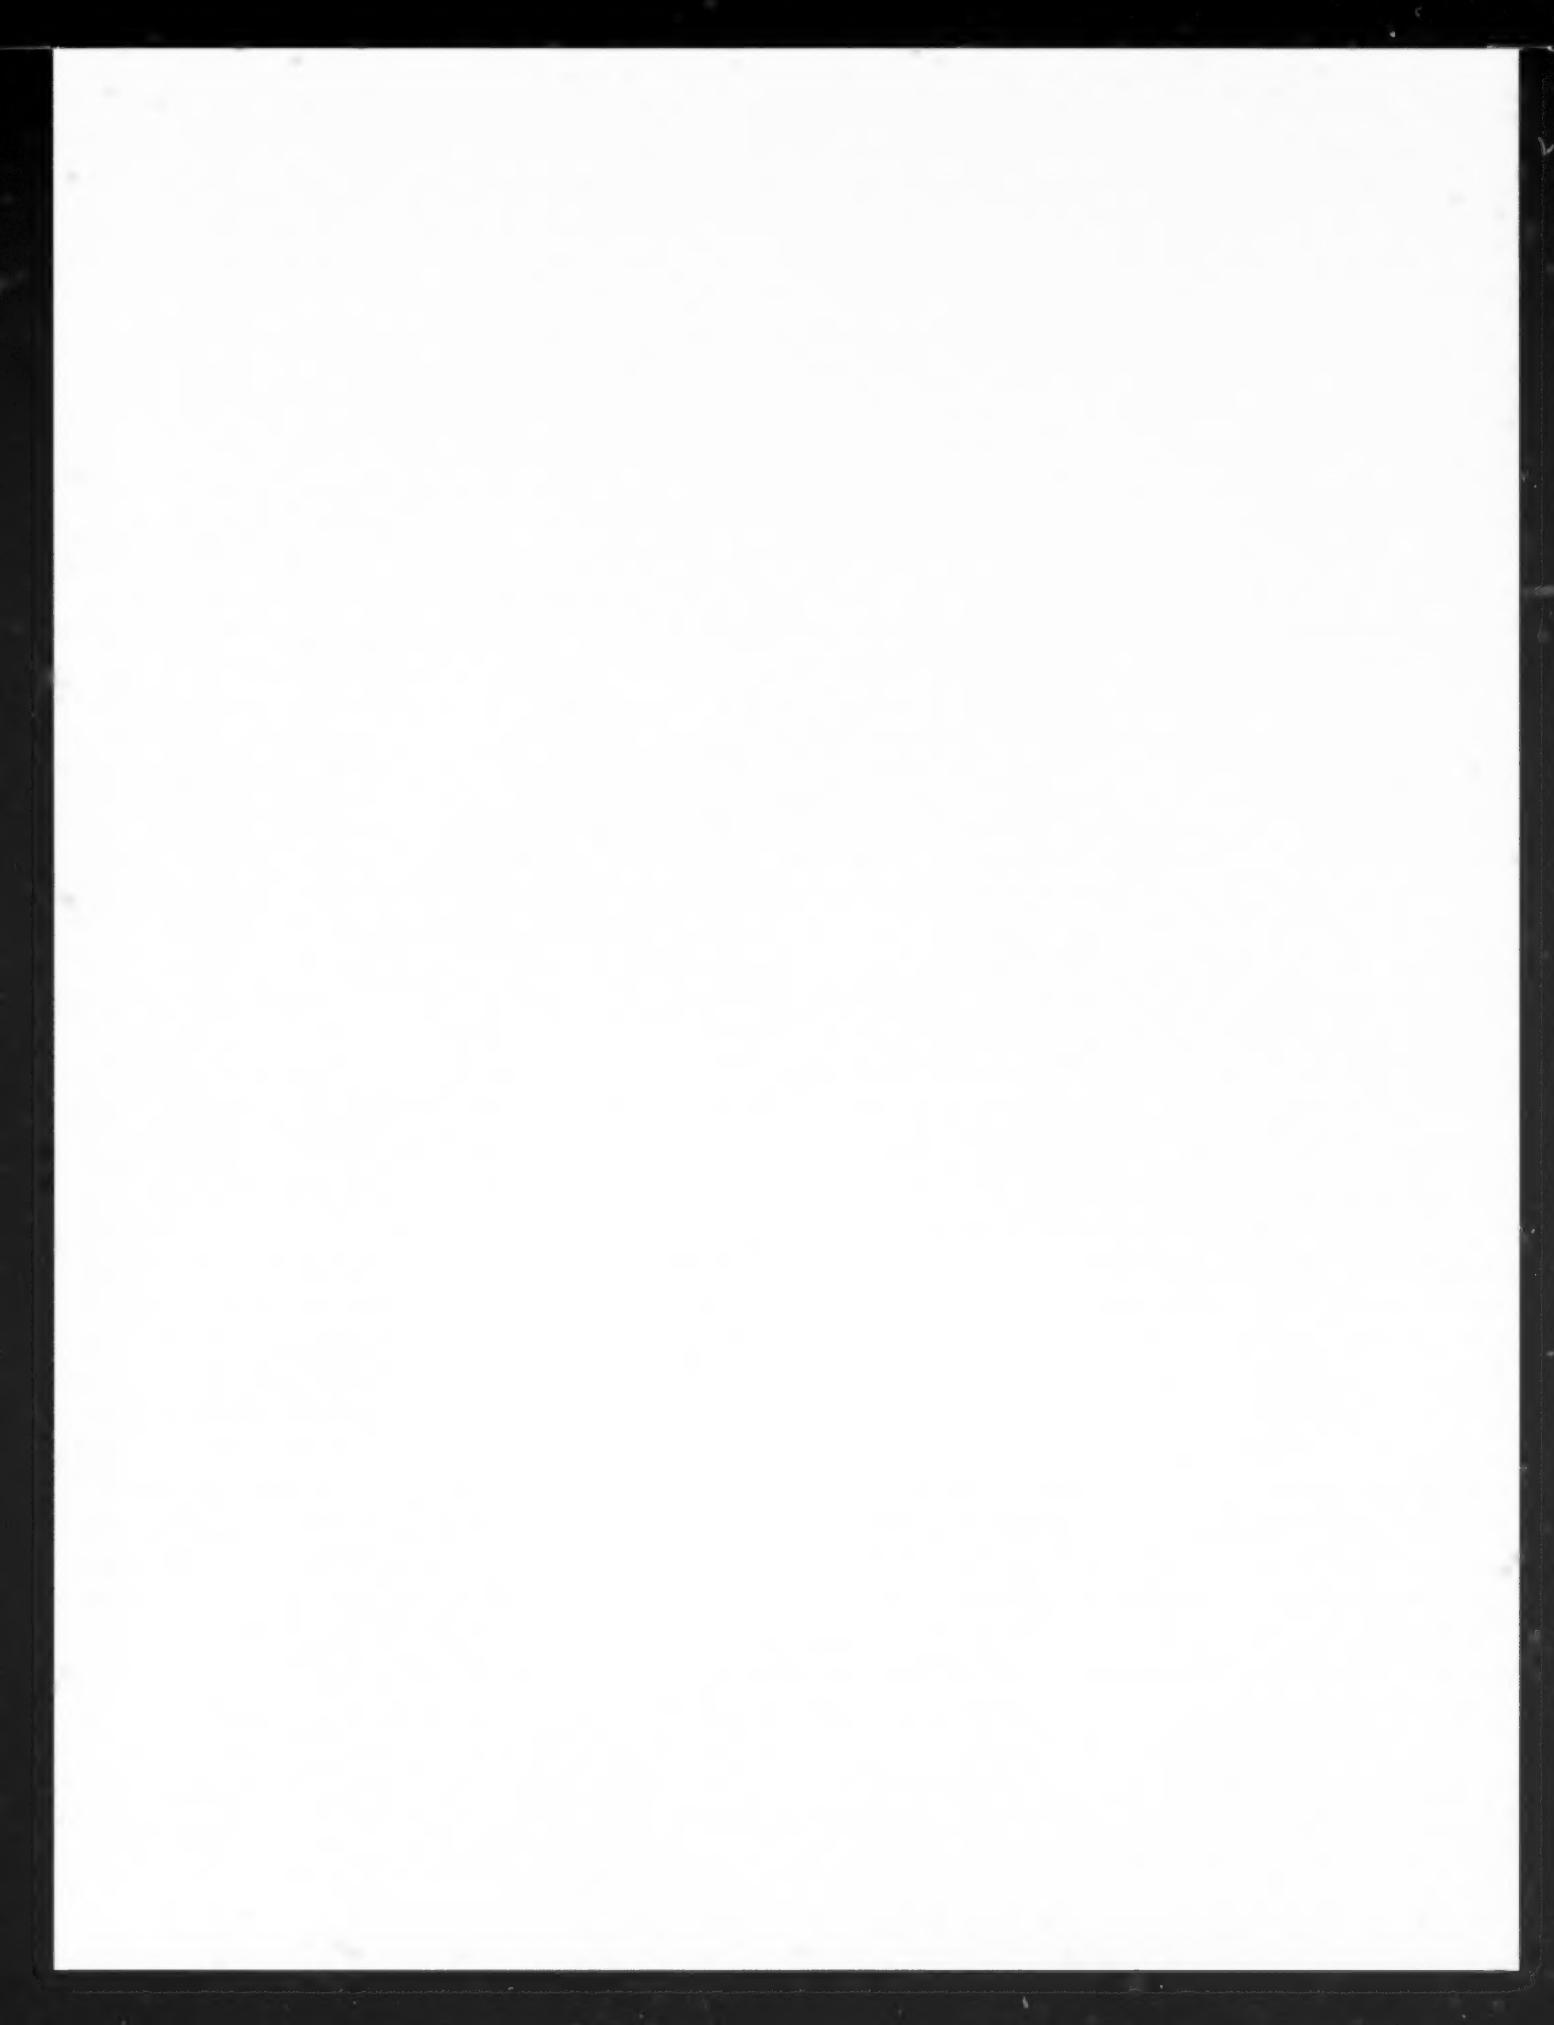

<sup>1</sup> The spacing requirements illustrated here are as specified in the *Oil and Gas Conservation Regulations* sections indicated within square brackets alongside or underneath each measurement.

No person shall smoke within 25 m of a well, separator, oil storage tank or other unprotected source of ignitable vapour or on a rig or derrick at a well site Section 8.120(1)).

<sup>2</sup> No flame type equipment shall be placed or operated within 25 metres of any process vessels unless, where such is applicable, the flame type equipment is fitted with an adequate flame arrester [8.090(5)]. No flame type equipment shall be located in the same building as any process vessel or other source of ignitable vapour, unless a) the air intakes and flues of all burners are located outside the building, b) relief valves, safety heads, and other sources of ignitable vapours are vented outside the building and discharged above roof level, and c) the building is adequately cross ventilated [8.090(6)a,b,c].

<sup>3</sup> "Surface improvement" means a railway, pipeline or other right-of-way, road allowance, surveyed roadway, dwelling, industrial plant, aircraft runway or taxiway, building used for military purposes, permanent farm building, school or church [1.020(1)28].

Compressors (electrically or engine driven) that are permanent and housed in a building must be located 25 m from wells, oil storage tanks, or unprotected sources of ignitable vapours. Compressors that are nonpermanent (on wheels or skid mounted) must be placed such that the air intakes and exhaust must be no closer than 6 m from a well. Nonpermanent electrically driven compressors must comply with the current edition of *Code for Electrical Installations at Oil and Gas Facilities*, Safety Codes Council (Alberta).

## **Appendix 7    Generic H<sub>2</sub>S Release Rate Assessment (Case Study)**

The following example does not represent a specific location, but is presented to clarify the requirements.

### **Geological Discussion**

#### **Proposed Well**

A well prognosis must be provided, but is omitted for the purposes of this generic example. The proposed exploratory well will be drilled to test a Leduc Formation anomaly in the Edmonton area. The well is located on a Palaeozoic high with 10 metres (m) of structural relief relative to the surrounding wells. The applicant believes the well will have secondary Ellerslie member potential and expects both zones will contain oil.

As the proposed well will penetrate intervals deeper than the top of the Mannville Group and will terminate in the Leduc Formation, a comprehensive geological discussion of all intervals deeper than the top of the Mannville Group to the Leduc Formation is required (Section 7.11.15.1). In this example, a discussion of reservoir and hydrocarbon potential would be required for the Ellerslie member and the Wabamun, Nisku, and Leduc Formations.

In this example, the release rate will be based on the potential of encountering 10 m of gas in the Ellerslie member, gas in the Nisku Formation, and 20 m of gas cap gas in the Leduc Formation. The formation thicknesses of the Ellerslie and Leduc have been determined from the data presented below and meet the requirement to adjust the H<sub>2</sub>S release rate to reflect the maximum potential thickness encountered.

### **Geological Impact on the Release Rate**

#### **Ellerslie Member**

The Ellerslie member is a mixed sequence of sand and shale with potential for encountering hydrocarbon. The well in the adjoining section contains 20 m of wet sands. Since the well is anticipated to encounter the Ellerslie 10 m structurally higher, there is potential for encountering 10 m of hydrocarbon. The oil pools in the area have associated gas caps.

#### **Wabamun Formation**

Based on the available information (production, well logs, perforation recoveries, and drillstem tests), the Wabamun Formation is a productive gas reservoir 3 km updip of the proposed well location. Recovery information from intervening wells updip and downdip of the proposed location indicate that the Wabamun Formation is wet. Therefore, it would be reasonable to conclude that this interval would be wet.

#### **Nisku Formation**

The applicant does not identify the Nisku on Schedule 4: Well Purpose. Within 5 km of the proposed well there are two Leduc Formation producers in the area that are overlain by the Nisku intervals that tested gas. Therefore, Nisku Formation potential must be considered. To obtain five reliable data points, the search area required expansion to 10 km.

#### **Leduc Formation**

Existing Leduc Formation production in the area indicates that some oil pools have associated gas caps. The potential for encountering a gas-bearing interval must be considered. Based on available well structure information, the maximum anticipated gas cap thickness is 20 m.

## **Geological Mapping**

As per the requirements detailed in Section 7.11.15.2, a geological map must be provided for all formations that the applicant has identified or will identify on Schedule 4: Well Purpose, as its primary and secondary zones that may contain H<sub>2</sub>S gas. Maps are not provided in this case study. The following map descriptions are intended to illustrate examples of the annotated maps and are not intended to be inclusive. An applicant may provide any additional information considered appropriate to substantiate its interpretation. In this example the annotated maps must illustrate the following:

### **For the Ellerslie Member**

- productive Ellerslie pools in the area relative to the proposed well location
- the geological interpretation of the expected reservoir thickness at this location and the interpreted thickness of the reservoir within productive pools
- reservoir thickness of the offset well used as an analog containing the 20 m of wet sandstone
- structure elevation of the proposed location illustrating the 10 m relative difference in elevation between the offset well and proposed location

### **For the Leduc Formation**

- productive Leduc pools in the area relative to the proposed well location; the map should illustrate the geological interpretation of the expected reservoir thickness at this location and the interpreted thickness of the reservoir within productive pools

## **Engineering Discussion**

### **Ellerslie Member**

The Ellerslie produces both gas and oil from pools with concentrations of H<sub>2</sub>S ranging from 0.0 to 2.0%. Some wells located within the pools have encountered associated gas caps that range from 2 to 6 m in thickness. Engineering information indicates that AOFs range from 10 to 30 10<sup>3</sup> m<sup>3</sup>/day. The maximum AOF was measured at a well with 5 m of net pay. The AOFs are extrapolated from drillstem tests (DSTs) conducted over the gas portion of the pool. Adjusting the highest AOF for the anticipated pay in the proposed well results in an AOF of 60 10<sup>3</sup> m<sup>3</sup>/d. The highest H<sub>2</sub>S concentrations were reviewed and determined to be from wells that were oil producers when sampled and were, therefore, discounted. The next highest H<sub>2</sub>S concentration is 0.07 %. This was sampled from an oil well that has a DST over the gas zone. The H<sub>2</sub>S concentration of 0.07% was used, along with the AOF of 60 10<sup>3</sup> m<sup>3</sup>/d to arrive at a release rate of 0.005 m<sup>3</sup>/s.

### **Nisku Formation**

The Nisku tested gas in some wells that are producing from the Leduc pools. Engineering information indicates that the H<sub>2</sub>S concentration ranges from 5 to 6.5% and that the AOFs range from 10 to 50 10<sup>3</sup> m<sup>3</sup>/d. An AOF of 50 10<sup>3</sup> m<sup>3</sup>/d and an H<sub>2</sub>S concentration of 6.5% were used to estimate a release rate of 0.04 m<sup>3</sup>/s. Although the analog well was stimulated prior to testing, a skin of 0.0 was reported and therefore no correction for skin was required.

### **Leduc Formation**

Producing Leduc pools have encountered associated gas caps containing H<sub>2</sub>S. Total reservoir thickness of the Leduc ranges from 10 to 20 m. Engineering information indicates that the H<sub>2</sub>S concentration ranges from 8 to 10% and that AOFs range from 70 to 170 10<sup>3</sup> m<sup>3</sup>/d. The maximum AOF was measured at a well with 15 m of net pay. Adjusting the AOF of 170 10<sup>3</sup> m<sup>3</sup>/d from 15 m of pay to 20 m of pay resulted in an AOF of 227 10<sup>3</sup> m<sup>3</sup>/d. The highest H<sub>2</sub>S concentration was from a gas sample listed with a sample point of

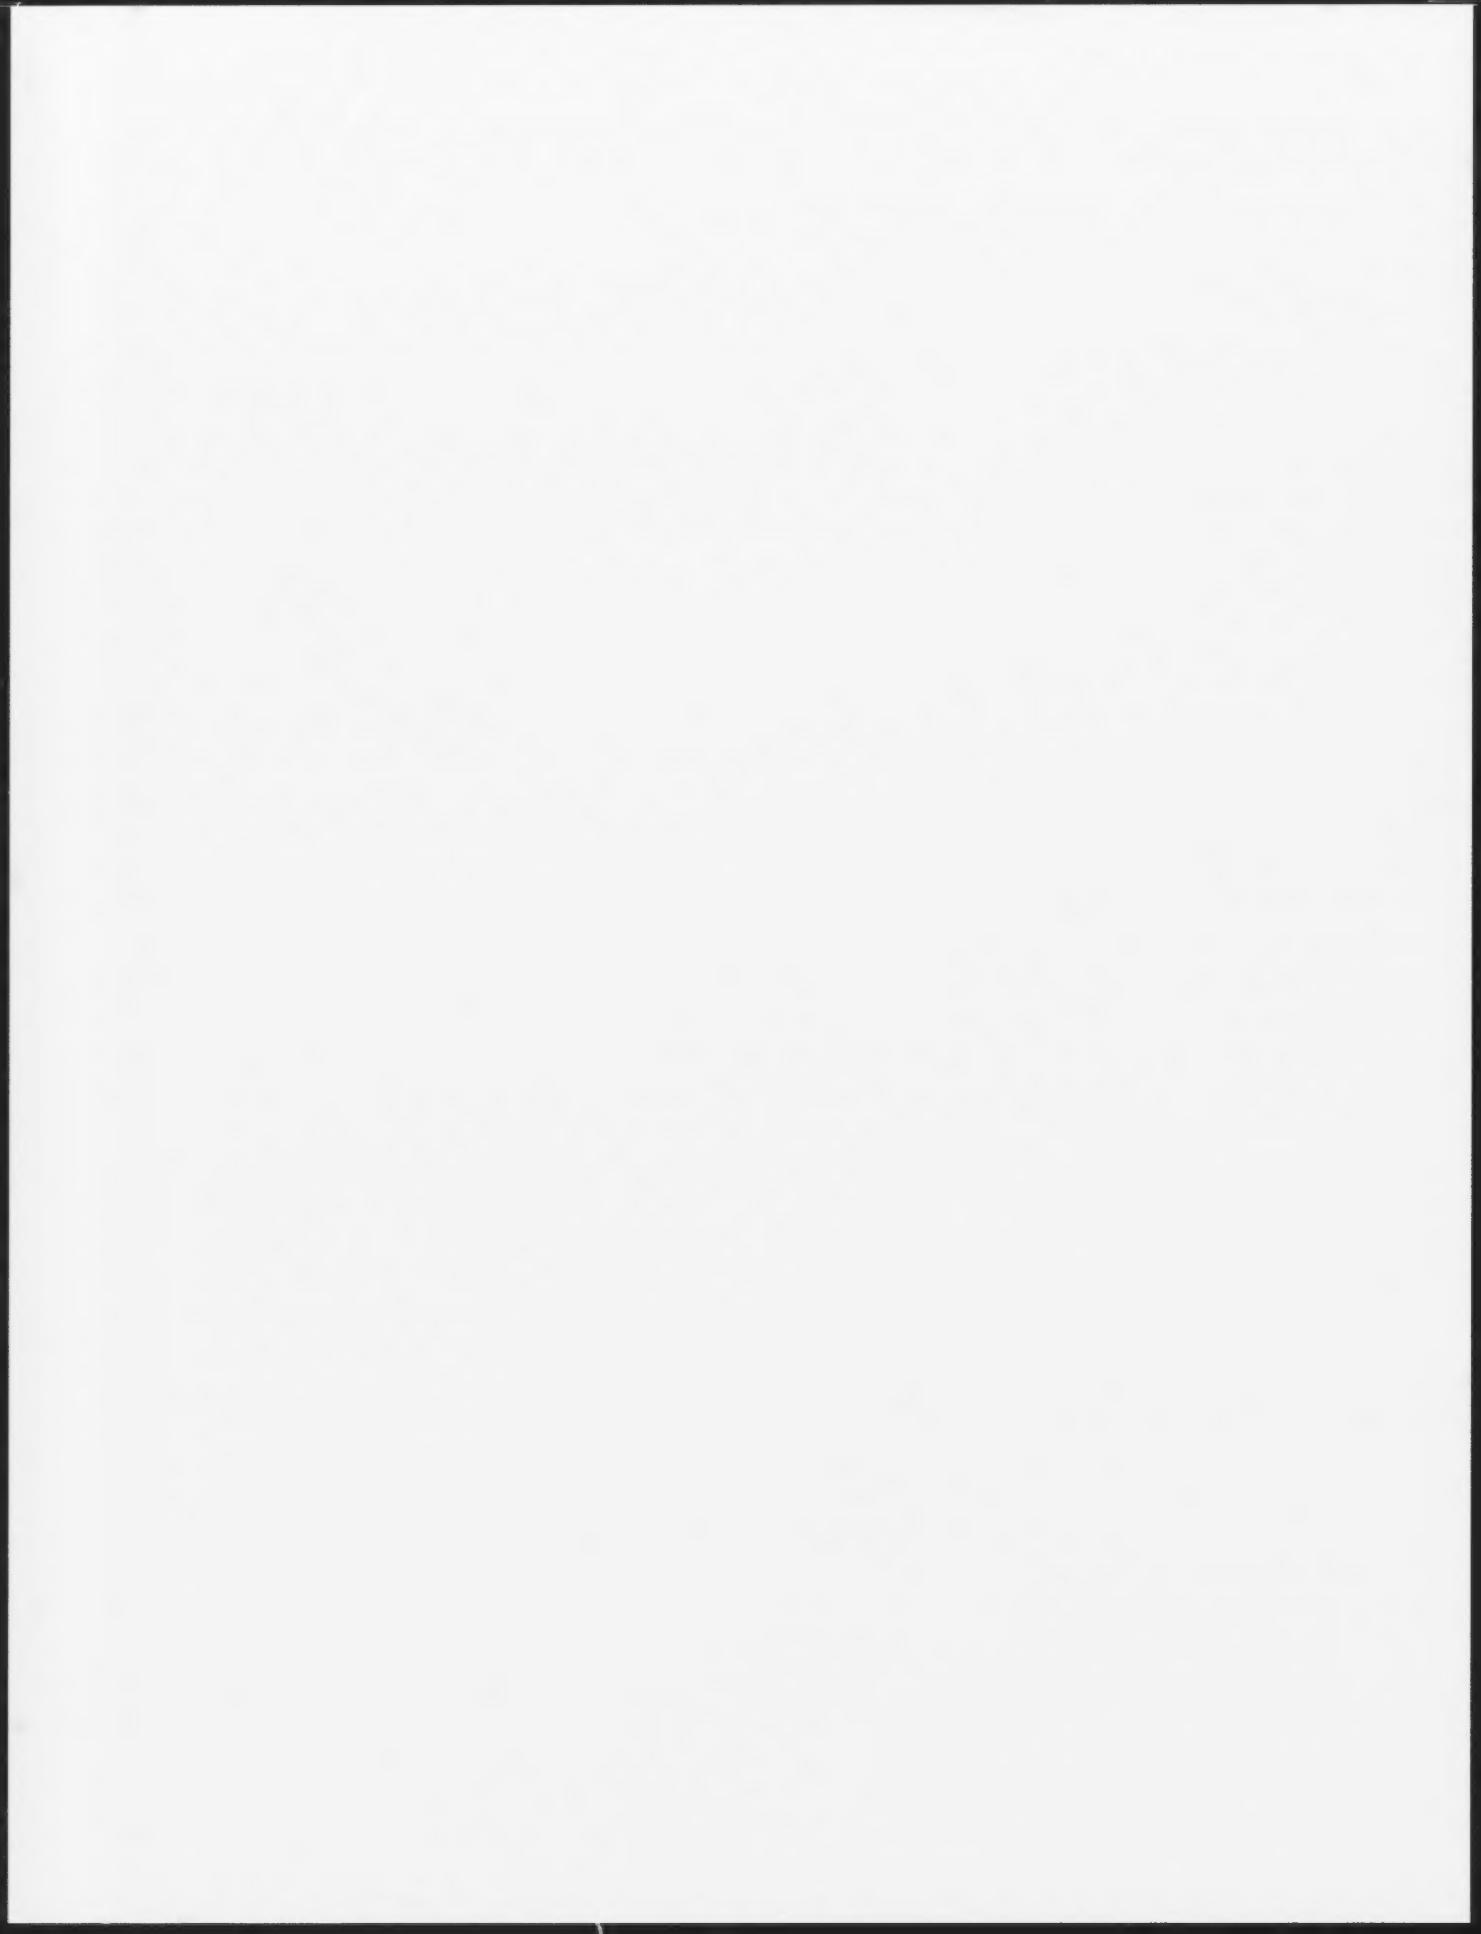

“other.” A review of the hard copy indicates that the sample point was a meter run; therefore, it will be used. Combining the AOF and the H<sub>2</sub>S concentration results in an H<sub>2</sub>S release rate of 0.26 m<sup>3</sup>/s. Since the analog well used was stimulated (fractured) prior to testing, the AOF test data were reviewed to determine the reported skin. Using the skin of -4 resulted in a prestimulation AOF and an H<sub>2</sub>S release rate of 126 10<sup>3</sup> m<sup>3</sup>/d and 0.15 m<sup>3</sup>/s respectively.

#### **Cumulative Release Rate**

Based on the review done for each formation, the drilling release rate for the well is 0.20 m<sup>3</sup>/s and the completion/servicing release rate is 0.26 m<sup>3</sup>/s. In this case, it is assumed that the correction for flow to surface up tubing is minimal and the suspended/producing release rate is 0.26 m<sup>3</sup>/s. In some cases an applicant may choose to make a correction for flow to surface up tubing. If the adjustment for stimulation was not done for the Leduc Formation, the drilling, completion/servicing, and suspended/producing release rates would have been reported as 0.31 m<sup>3</sup>/s.

#### **Tabulated Data**

Tabulated data must be submitted to the ERCB with the complete documentation package prepared for each well licence application but are not shown here.

## Appendix 8 Stepped-Approach to Licensing Gas Batteries

The *Directive 056* definition of a gas battery has been revised to coincide more with the battery definition found in the *Oil and Gas Conservation Act* such that the installation and use of hydrocarbon product and/or produced water tanks at the facility site are the defining factors when licensing surface equipment as a gas battery (see Appendix 3).

The requirements set out in Section 5.5.1 for single-well sweet production sites are still applicable. However, in the case of a single-well sour gas site ( $\text{H}_2\text{S} > 10 \text{ ppm}$ ), the following has been incorporated into Section 5.5.1:

An application is not required under *Directive 056* if the facility is a single-well gas site where the  $\text{H}_2\text{S}$  content is greater than 0.01 mol/kmol and

- there are no liquid hydrocarbon/produced water tanks,
- there is no gas compression,
- there is no gas processing, and
- there is no injection/disposal component.

Single-well sour line heaters located at a well site lease do not require a *Directive 056* facility licence application.

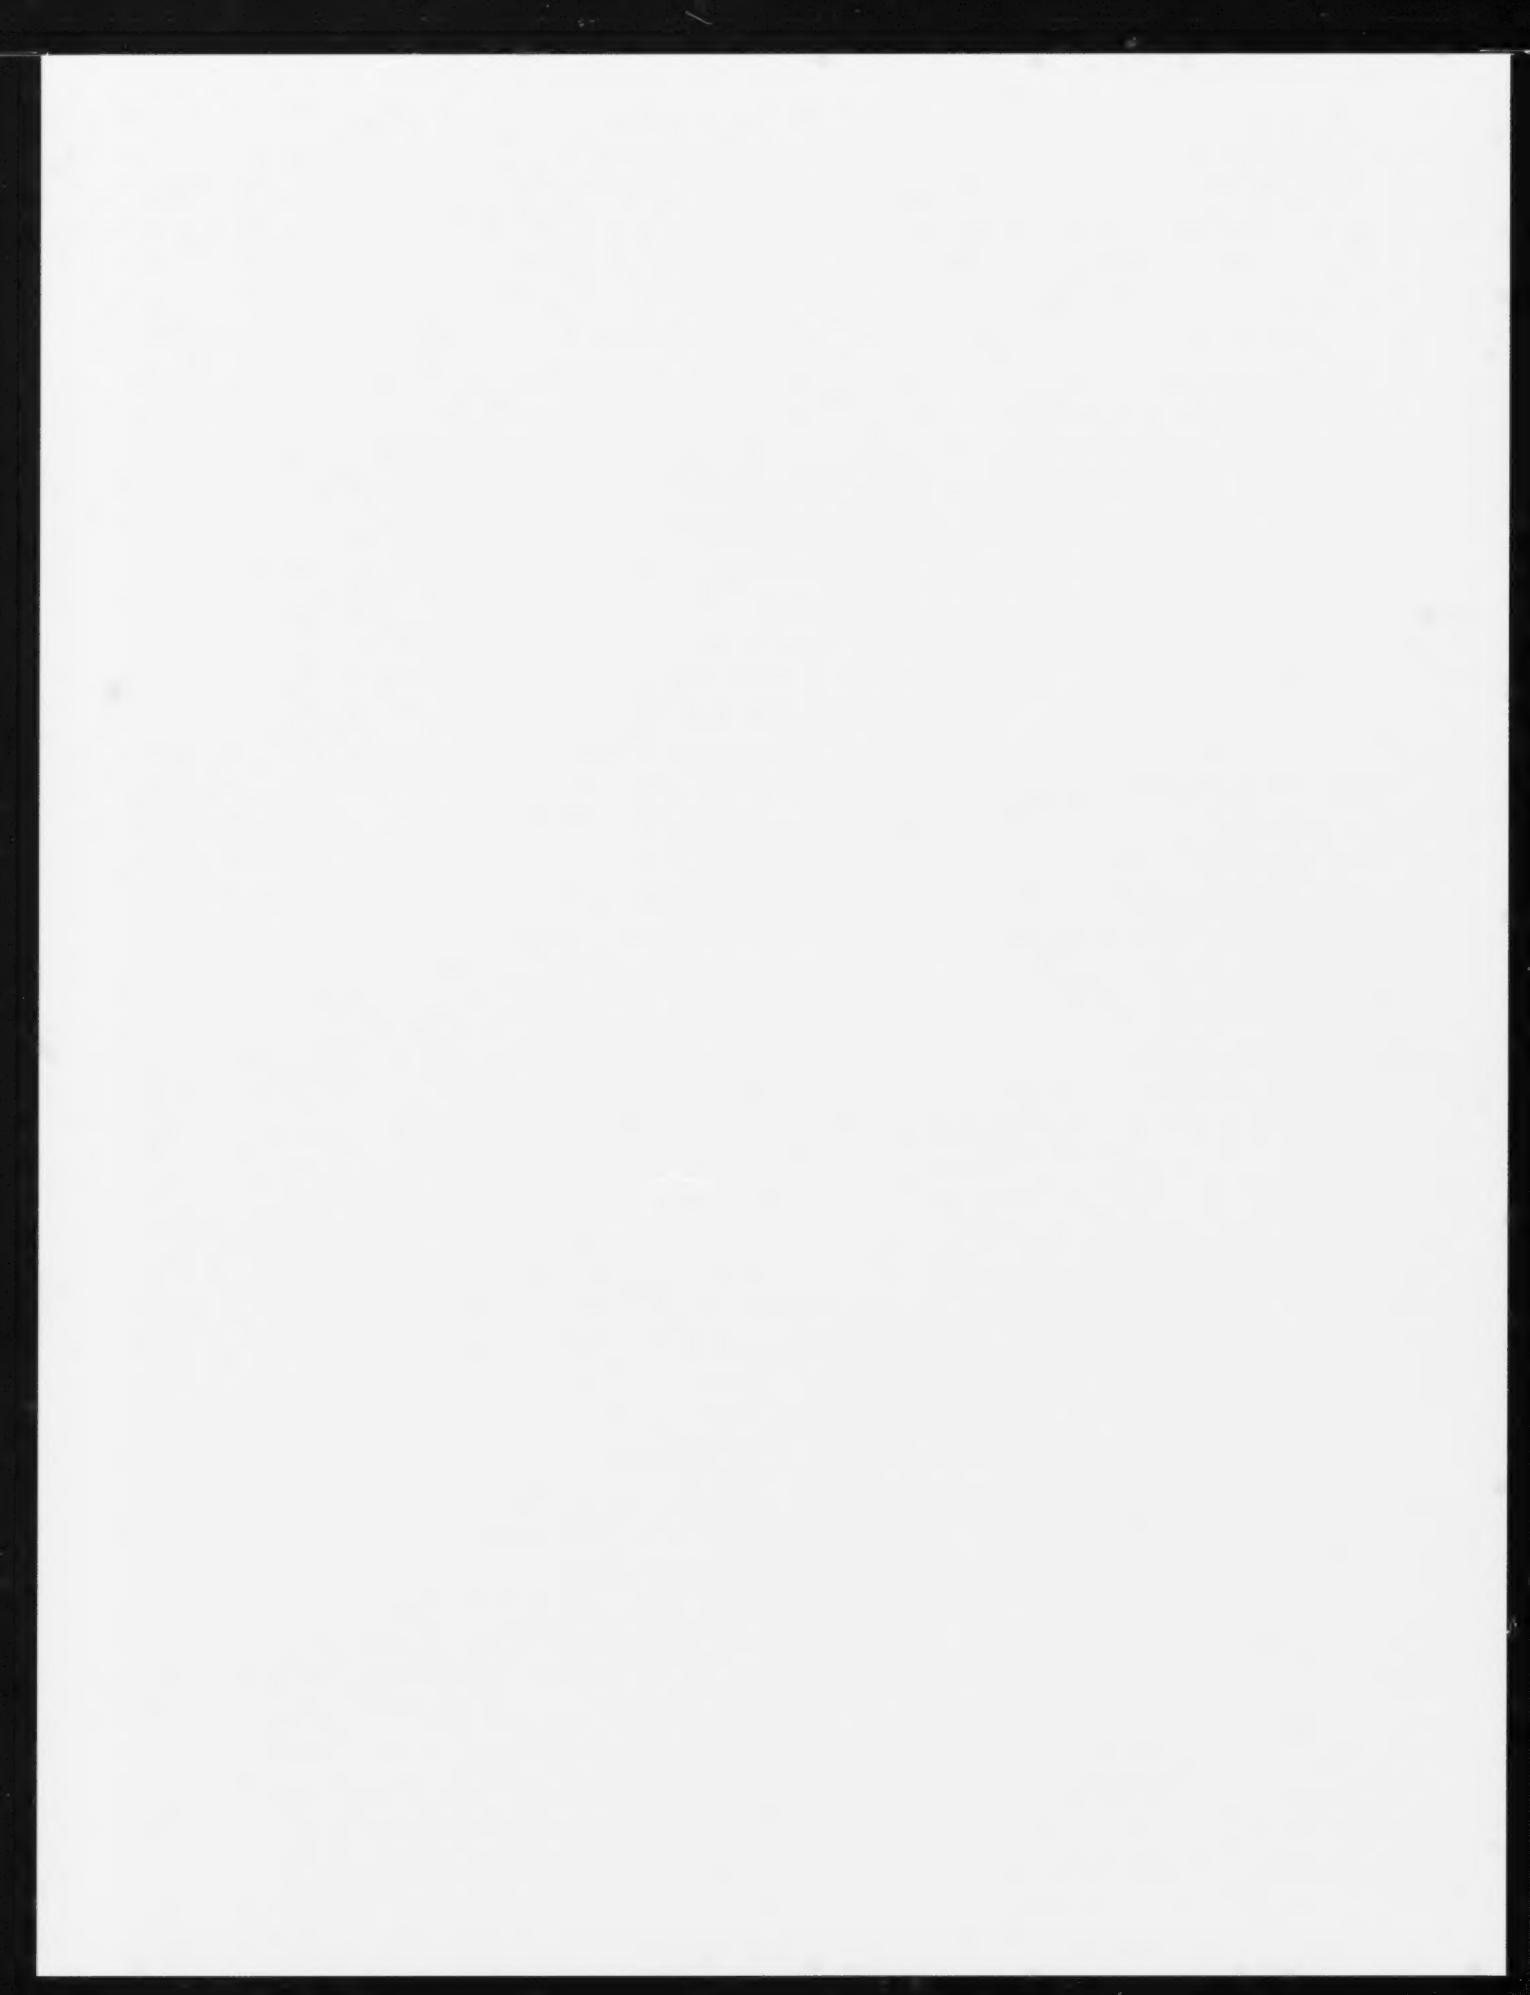

### Gas Battery Licensing Matrix

The table on the next page provides scenarios to assist companies in determining if the equipment proposed for installation requires the submission of a *Directive 056* facility licence application. When using this table, please note the following:

- Production scenarios are applicable to gas production facilities only.
- Single-well scenarios are defined as one wellbore with a single producing zone or multiple zones producing commingled within one wellbore.
- Multiwell scenarios will continue to be based on the production scenarios outlined in Section 5.4:
  - a) multiple zones are producing from one wellbore, but the production remains segregated (i.e., not commingled in the wellbore);
  - b) production from a second well is pipelined to an existing single-well facility; or
  - c) multiple single-well facilities are operating within one lease.
- Scenarios for which a *Directive 056* application is not required must meet all measurement, accounting, and reporting requirements set out in the *Oil and Gas Conservation Act and Regulations* and all applicable guides and directives published by the ERCB.
- All applications will continue to be required for compressors regardless of kW rating if the  $\text{H}_2\text{S}$  content of the inlet gas is  $> 10 \text{ ppm}$  (see Section 5.5.1).

Case	Surface equipment	Single gas well H <sub>2</sub> S content < 0.01 mol/kmol	Single gas well H <sub>2</sub> S content > 0.01 mol/kmol	Multiwell gas H <sub>2</sub> S content < 0.01 mol/kmol	Multiwell gas H <sub>2</sub> S content > 0.01 mol/kmol

## **Appendix 9     Surface Equipment Scenarios**

On-site surface equipment determines facility licence requirements. To assist applicants in determining when an application is required, surface equipment scenarios are given below.

### **Case 1**

A new facility will comprise a free water knockout, a separator, and a water disposal well. The inlet feed consists of oil ( $731 \text{ m}^3/\text{d}$ ), water ( $1169 \text{ m}^3/\text{d}$ ), and gas ( $66 \cdot 10^3 \text{ m}^3/\text{d}$ ), and the  $\text{H}_2\text{S}$  content of the gas stream is 25 mol/kmol. Oil and gas are recombined and pipelined to another battery, while the water is measured and disposed of at the facility site.

**Action:** Application is required for a licence as a sour satellite with an injection/disposal component. The primary purpose of the facility is to handle oil production and test individual well production; the process description (recombining after measurement and pipelined elsewhere) matches as the current definition of a satellite, and it is operationally acceptable to have a water disposal component associated with a satellite.

### **Case 2**

An existing licensed compressor station with 0.0 mol/kmol  $\text{H}_2\text{S}$  is experiencing hydrocarbon dew point problems. A desiccant system is needed to produce pipeline spec gas. Condensate recovery will be less than  $2 \text{ m}^3/\text{d}$ . No other changes will occur (e.g., emissions, category, or type).

**Action:** No application is required to install the dew point control system. It will remain a compressor station. The dew point control system is not recovering condensate volumes greater than  $2 \text{ m}^3/\text{d}$  (threshold volume as per the "Gas Processing Facility" definition, so no change to the current category type will occur).

### **Case 3**

A Joules-Thomson (JT) unit is being installed for hydrocarbon dew point control.

**Action:** Provided the liquids recovery remains less than  $2 \text{ m}^3/\text{d}$  and no additional emissions sources are generated, the facility would not be licensed as a processing plant. This applies to all desiccant and JT units.

### **Case 4**

A new 50 kW compressor is added to an existing licensed facility with greater than 0.01 mol/kmol  $\text{H}_2\text{S}$ .

**Action:** No application is required for the installation of one compressor less than 75 kW provided that the landowner has been notified and the facility continues to meet all applicable requirements (see Appendix 8).

### **Case 5**

Production from a single gas well (with 20 mol/kmol of  $\text{H}_2\text{S}$ ) is routed through an inlet separator where gas and liquids are measured. The gas enters the gathering system, while the liquids are stored in a tank until trucked out. Tank vapours are tied to a flare system.

**Action:** A single-well gas battery (Category C or D) application is required. An application is not required if the  $\text{H}_2\text{S}$  content is less than 0.01 mol/kmol.

### **Case 6**

An existing tank farm requires reconfiguration where one tank will be discontinued, a liner will be installed in the dike area, and the tank farm perimeter will be decreased.

**Action:** No application is required; however, the facility must continue to meet the storage requirements of Directive 055.

### **Case 7**

A water/EOR injection/disposal component is being added to an existing licensed facility and/or well site.

**Action:** An application is required. If added to an existing licensed facility, its original category and type are retained. If operating as a standalone process at a well site, it should be licensed as an injection/disposal facility.

### **Case 8**

Dehydration is being installed at an “exempt activity” facility where the H<sub>2</sub>S content is less than 0.01 mol/kmol and no compression or gas processing is occurring.

**Action:** No application is required.

### **Case 9**

A new facility with 0 mol/kmol of H<sub>2</sub>S is being constructed and will include the installation of an amine unit for CO<sub>2</sub> removal.

**Action:** Application required for Category B gas processing plant.

### **Case 10**

New flare or incinerator points are being added to an existing category C, D, or E facility.

**Action:** Application required to amend an existing facility.

### **Case 11**

Replacing existing flare or incinerator points with stacks of equal or greater height (or dispersion characteristics).

**Action:** No application required, since there will be no change to the category type or no increase in emissions.

### **Case 12**

Surface equipment includes ESD, meter run, and line heater where the inlet gas H<sub>2</sub>S is less than 0.01 mol/kmol (10 ppm).

**Action:** No application required.

### **Case 13**

A line heater is added to an existing Category C facility, and as a result, the total NO<sub>x</sub> emissions increase but the category type remains the same.

**Action:** Licence amendment application required.

#### **Case 14**

A temporary electric compressor is required while the gas unit is under repair.

**Action:** No application required provided that the landowner has been notified and has no concerns.

#### **Case 15**

A single oil well battery with 0.0 mol/kmol of H<sub>2</sub>S is being modified to accommodate the increase in the H<sub>2</sub>S content to 1.0 mol/kmol, and a flare system will be added.

**Action:** Application required for a Category C or D single oil well battery.

#### **Case 16**

An existing single-stage compressor is reconfigured to two-stage compression.

**Action:** No application required. The company must advise the local ERCB Field Centre of the activity.

#### **Case 17**

An applicant intends to test an oil well (where the H<sub>2</sub>S content of the solution gas is 25 mol/kmol) for a three-month period.

**Action:** Application for a temporary Category C or D facility is required, and a licence must be obtained before well testing may commence (see *Directive 060*).

#### **Case 18**

An additional glycol pump is required at an existing Category C facility.

**Action:** No application required to install process pumps; only the installation of injection/disposal pumps will require licensing.

#### **Case 19**

A free-water knockout (FWKO) is required at a satellite location.

**Action:** No application required to install the FWKO; however, if there is an injection/disposal component associated with the FWKO, an application is required.

#### **Case 20**

The solution gas volumes at a Category C oil battery warrant conservation at this time. The operator proposes to conserve the solution gas by using it to generate electric power for the oil battery operations.

**Action:** The operator must receive approval from the Alberta Utilities Commission (AUC) for the installation of the equipment for the power generation portion of the project. The remaining equipment remains licensed under *Directive 056* and the licence should include emissions from all sources on-site, including power generation equipment. If selected for audit review, a copy of the AUC approval will be required.

### **Case 21**

The solution gas volumes at an existing licensed oil facility warrant conservation at this time. The licensee proposes to conserve the solution gas by processing the solution gas stream and recovering liquids.

**Action:** The primary purpose of the facility is to handle oil production; it is the increase in solution gas volumes that warrants the addition of gas processing equipment. The licensee must amend its existing oil battery licence to reflect that conservation is now occurring and file a separate application (new) for the gas processing portion of the operation. In rare instances such as these, Facilities Applications will issue two separate licences for one surface location.

### **Case 22**

A 56 kW water injection pump and water tank are being added to an existing facility.

**Action:** Application required to add the injection component.

### **Case 23**

An applicant intends to construct a new multiwell oil battery that will require a nonregenerative sweetening process. The facility inlet is less than 0.1 t/d of sulphur.

**Action:** An application is required for a Category C multiwell oil battery.

### **Case 24**

A long-term flare test (more than 21 days) is being conducted on a coalbed methane (CBM) well ( $H_2S$  content is 0.0 mol/kmol). Temporary facilities at the well site include a separator, measurement equipment, water storage tanks, and a flare or incinerator. Typical of CBM gas, there is no measurable  $H_2S$  content.

**Action:** No application is required. However, the licensee should disclose its intention to conduct longer-term testing as part of the well application consultation process. It must complete public notification as described in *Directive 060*, Section 3, prior to test flaring. If any concerns/objections to the longer-term test and/or test facilities are received, Facilities Applications may require an application.

### **Case 25**

An operator intends to install a nonregenerative sweetening process at an upstream oil or gas facility to treat gas with less than 0.1 t/d sulphur inlet. Additional equipment includes storage tanks and separators.

**Action:** The surface equipment as described requires a licence as a Category C oil or gas battery.

### **Case 26**

A single well is producing oil (<0.01 mol/kmol H<sub>2</sub>S) from one formation and is completed for dry gas (<0.01 mol/kmol H<sub>2</sub>S) from another formation. Production for the oil zone comes to surface segregated from the gas where there is equipment for separation and measurement, including a storage tank. The gas zone is effluent measured (no separation) and combined with the solution gas from the oil well.

**Action:** This facility should be licensed as a multiwell oil battery (B030). If there were more significant gas production equipment (e.g., compression, dehydration), the site could be licensed as a multiwell gas battery (B020).

### **Case 27**

A series of gas gathering lines (<0.01 mol/kmol H<sub>2</sub>S) are brought to a single lease where gas is combined into a header system and into a 400 kW compressor. In the compressor design, there are suction scrubbers located ahead of the inlet to each stage of compression. The scrubbers drain into a drain tank on lease.

**Action:** This facility should be licensed as a compressor station (B040). The scrubbers take out any residual water of condensation that may form in the upstream pipeline before compression. If a separator were to be located upstream of the compressor, the facility would need to be licensed as a gas battery – multiwell. If the only inlet to the compressor were an on-site single-well gas battery (< 0.01 mol/kmol H<sub>2</sub>S) that included storage of produced water, the facility would still be a compressor station, as the single-well battery would be exempt from licensing.

### **Case 28**

A new sweet single-well gas battery is being added to the same site as an existing sour single-well oil battery.

**Action:** The existing sour single-well oil battery should have a facility licence already. If the same licensee is adding a sweet single-well gas battery to the same lease, it should amend the existing sour single-well oil battery licence to include the gas well by filing a licence amendment application for a multiwell sour oil battery.

### **Case 29**

An effluent meter for a sweet gas well at location A is being added to the inlet of an existing exempt gas battery (no licence required) at location B. Gas from well A will be tied into an existing pipeline at location B and no surface equipment will be located at A.

**Action:** Site B should be licensed as a sweet multiwell gas battery since it will be receiving and treating the production from two wells (A and B).

### **Case 30**

A flare stack for emergency maintenance flaring is being added to an existing well site where the on site equipment does not require a facility licence.

**Action:** No application is required. However, if the site is an existing licensed facility, the installation of a new flare stack would require an amendment to the existing facility licence.

### **Case 31**

An existing licensed compressor is being replaced with a compressor that has the same wattage and compressor drive power source.

**Action:** No application is required if the compressor is being replaced with a similar or smaller unit and the total NO<sub>x</sub> emissions will not increase. However, if the existing compressor is being replaced by more than one compressor with the combined total wattage remaining the same, an application is required due to the potential change in overall noise levels.

### **Case 32**

A single-well battery with separation and water storage is being installed at a gas well with greater than 10 ppm H<sub>2</sub>S. A chemical that bonds with the H<sub>2</sub>S molecules will be injected into the gas stream in the wellbore and captured in the water tank after separation. The water with the chemical will be disposed of in an approved disposal well.

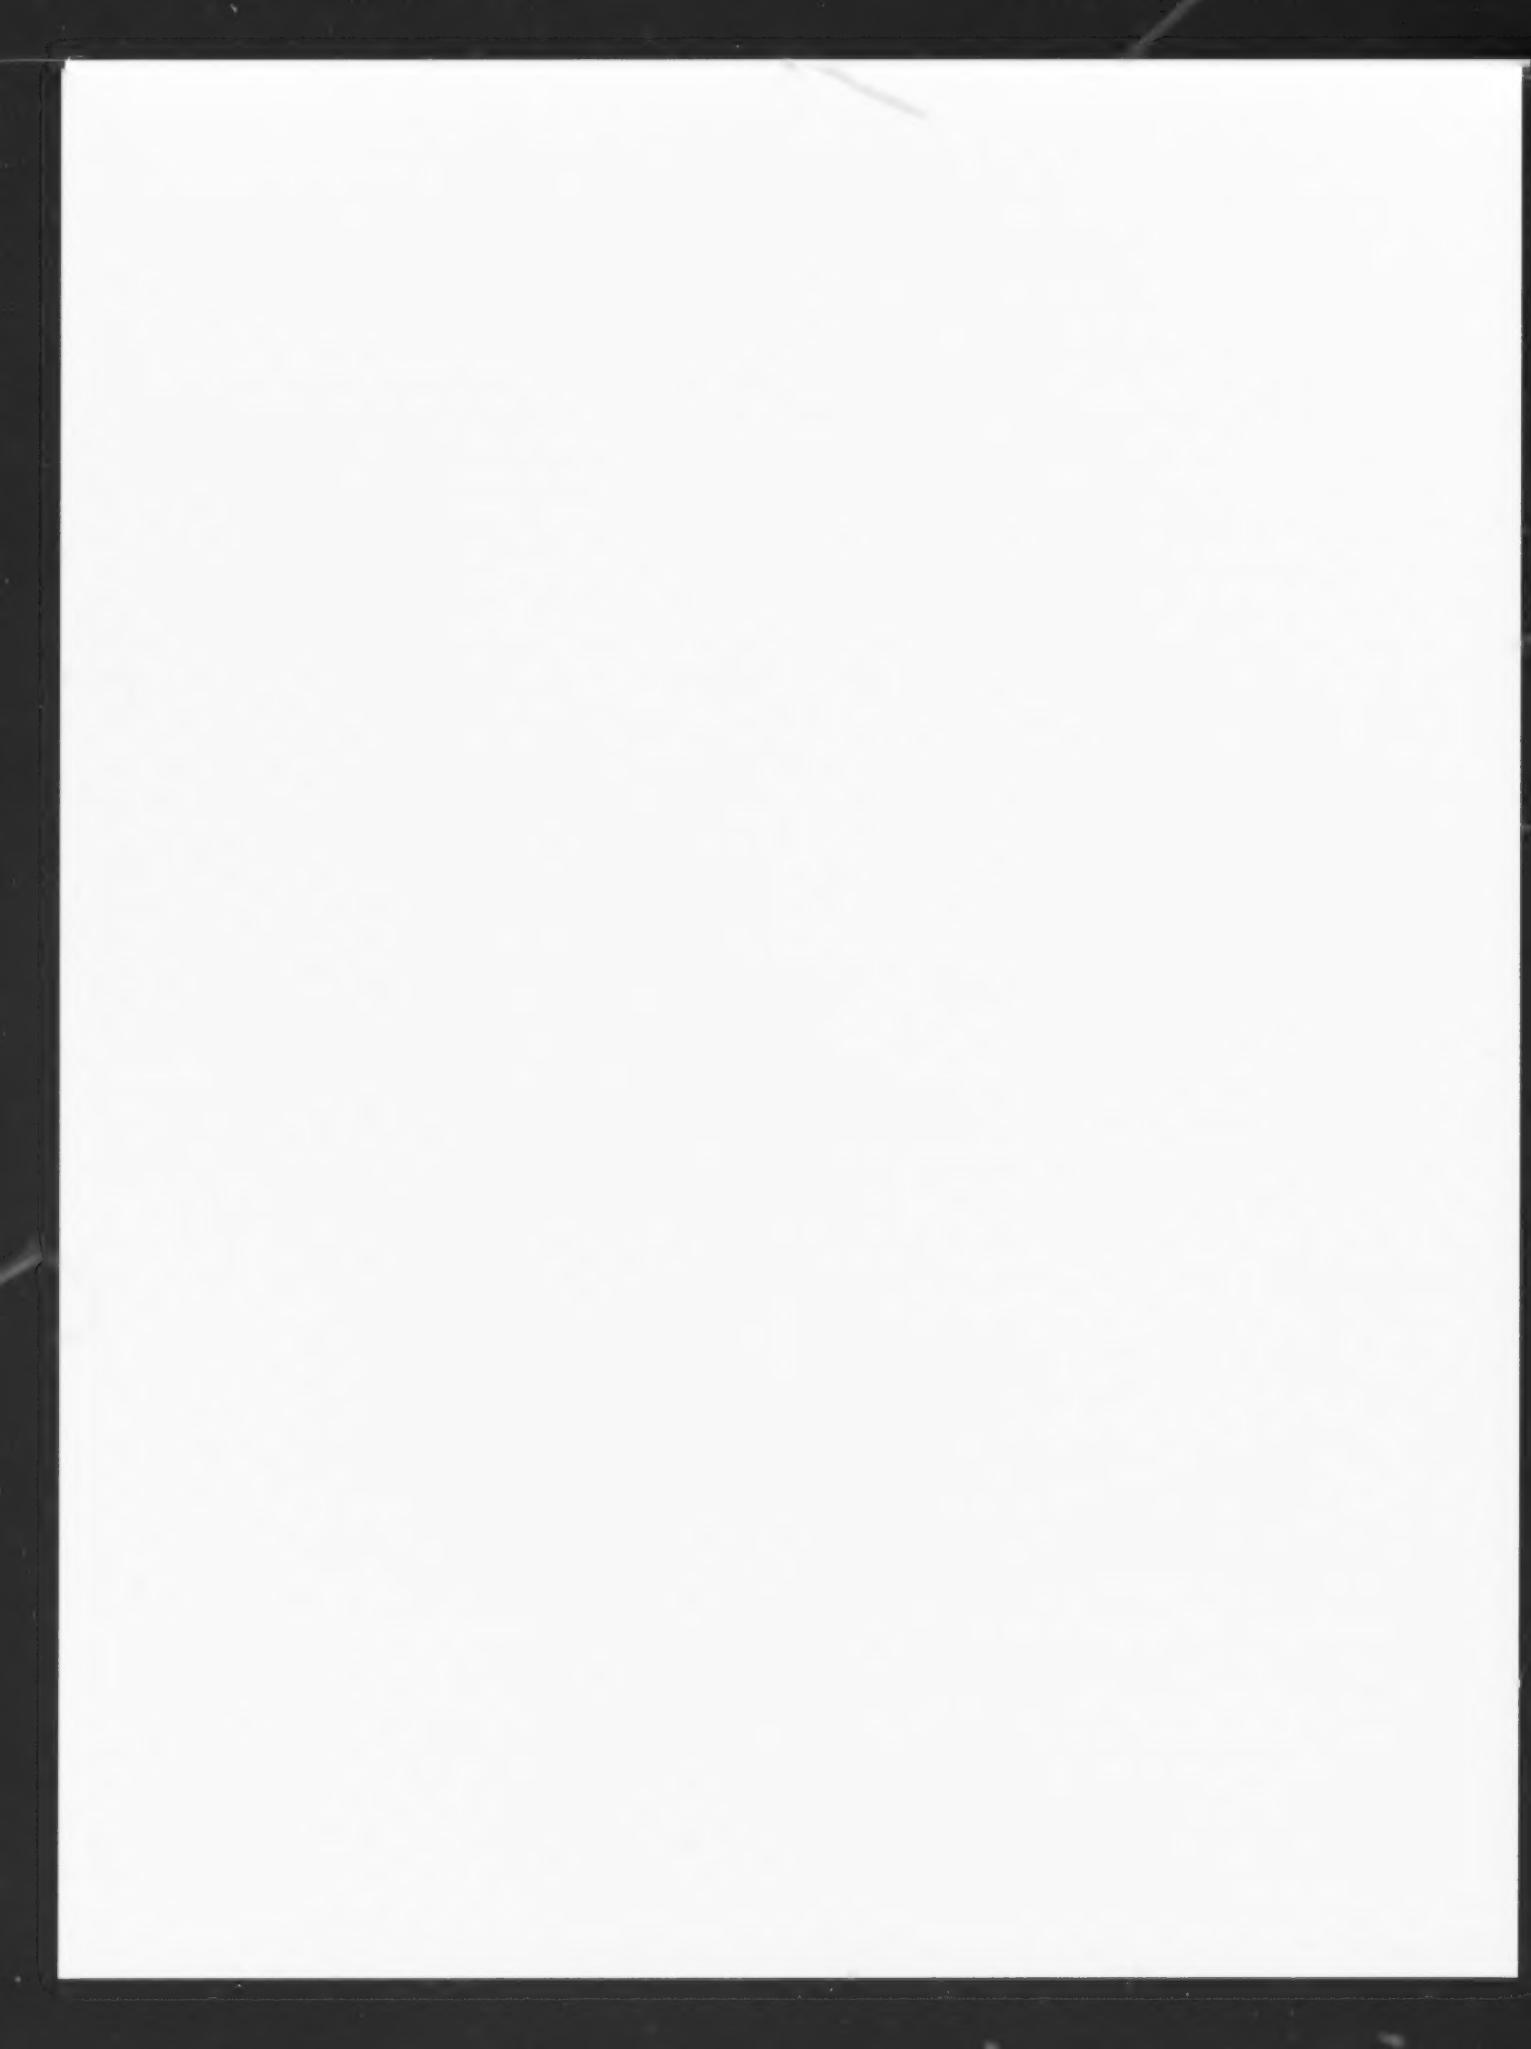

**Action:** A facility licence for a single-well C or D category gas battery is required based on the H<sub>2</sub>S content of the raw gas as determined by a gas analysis. The use of an “add and capture” process to remove the H<sub>2</sub>S from the gas stream prior to disposition into a sweet natural gas pipeline does not change the categorization of the facility. Although the H<sub>2</sub>S will be entrained with the chemical, the product will still be received by the facility and needs to be appropriately managed.

## **Appendix 10**

### **ERCB Public Documents**

- 1) Letter from the Chairman of the ERCB**
- 2) ERCB Brochure: Understanding Oil and Gas Development in Alberta**

**September 2011**

Calgary Office Suite 1000, 250 – 5 Street SW, Calgary, Alberta, Canada T2P 0R4 Toll-free 1-855-297-8311 Fax 403-297-7336 [www.ercb.ca](http://www.ercb.ca)

## A Letter from the Chairman of the ERCB

Dear Neighbour,

I am writing to you because a representative of a petroleum company proposing development has recently approached you, and you may have questions. The company plans to make an application to the Energy Resources Conservation Board (ERCB) for an energy development (which may include a facility, a pipeline, or a well) on your lands or your neighbours' lands. The ERCB requires the company to either notify or personally consult with you before obtaining a licence and provide you with information that may include the documents described below. When the ERCB does not require that the documents be provided, you may request them from the company.

**ERCB Public Information Documents**—These include this letter, the brochure Understanding Oil and Gas Development in Alberta, EnerFAQs No. 7: Proposed Oil and Gas Development—A Landowner's Guide, EnerFAQs No. 15: Objecting to an Energy Resource Project and the form Objecting to an Energy Resource Project, and the EnerFAQs series related to energy development. These documents contain information about your rights and options, as well as the roles and responsibilities of the ERCB in the regulation of Alberta's energy developments and how we can help you.

**Company's Information Package**—This includes sufficient information about the proposed project so that you can understand the nature, scope, and potential impacts the proposed development may have on you and your family. You will be asked to bring forward any questions or concerns you may have and to go over the specifics of the proposed development with the company representative. The company is required to answer all reasonable questions posed by you.

I encourage you to carefully review the information provided and to meet with company representatives to discuss the proposed development. The conversation should include any measures that could be put in place by the company to reduce potential impacts, alternatives to the proposal that may exist, and the overall future development proposed for your area.

If there are matters that cannot be resolved, the ERCB can provide you with more information on its Appropriate Dispute Resolution (ADR) program, which includes ERCB facilitation and third-party mediation. Unresolved issues could ultimately result in the ERCB holding a public hearing to consider the application. While the ERCB encourages all parties to first attempt to cooperatively reach agreement, all should be aware that they have the right, at any time, to request that the ERCB hold a public hearing.

If you have questions about our materials or our processes, please call the ERCB for assistance at the numbers listed on the back of this letter.

Additional information about the ERCB and its regulations are on our Web site at [www.ercb.ca](http://www.ercb.ca).

Sincerely,

Dan McFadyen  
Chairman

## **ERCB Brochure: Understanding Oil and Gas Development in Alberta**

This brochure contains basic information to help you understand what sort of development is being proposed and how it affects you.

An oil and gas company representative has approached you and wants to conduct oilfield activities on or near your land. You and the company will be discussing the proposed development and its potential impact on you, as well as alternatives and measures to minimize impacts. You may also be negotiating a surface lease agreement (for example, on the location of a well and access road) and discussing compensation.

### **ERCB Requirements and Expectations for Participant Involvement**

The ERCB believes that any individual, organization, community, or group with a stake in Alberta's energy resources is a participant, having both roles and responsibilities. All participants are encouraged to develop relationships that are respectful, responsive, and responsible. While other groups also have a stake in energy development, the three main participant groups are the public, industry, and the ERCB.

**The public:** The ERCB application process provides the public with an opportunity to share its questions and concerns with the company. There are many things the public, individually or collectively, can do to participate in the planning of proposed developments. Many communities have formed groups with members from industry and the ERCB. These groups try to find ways to resolve issues at the local level. The company will provide you with contact information if there is a group in your area.

**Industry:** Industry is required to notify and if necessary consult with people whose rights may be directly and adversely affected by proposed development. Industry is expected to consult with other interested parties it identifies from a regional review of needs and issues. Industry is also expected to communicate with landowners and residents on a regular basis throughout the life of the project, which may be 30 years or longer.

**The ERCB:** As the regulator of the energy industry, the ERCB has the authority to approve or deny proposed energy developments in the province of Alberta and to place enforceable conditions on any licences issued. The ERCB also assists individuals, communities, and other interested groups to understand the regulatory requirements and expectations and how they apply at the local level.

### **Your Rights and the Company's Rights**

In Alberta, both the landowner and the company have rights.

**Rights to information:** Under ERCB regulations, requirements, and guidelines, the company must provide information to all parties whose rights may be directly and adversely affected by a proposed project so they can fully understand what is being proposed. If you are concerned about surface impacts, the company must give you details about how and why it chose the proposed well site, pipeline route, and access road location. The company should also tell you what to expect in terms of equipment and operations during the production phase.

The company may provide any agreements you make with it, as well as records of discussions, to the ERCB during the application process. That material becomes part of the ERCB's record of the application, which is a public record available to anybody. In addition, information provided to the ERCB (whether as part of the application process or otherwise) may be publicly available under the *Freedom of Information and Protection of Privacy Act*. The exception to this is agreements made in Appropriate Dispute Resolution, which are confidential.

**Mutual rights to use the land:** Most land in Alberta carries two titles and two sets of rights. The surface title gives the landowner full control of the land's surface and the right to work it. The mineral title gives the company or person who owns the minerals under that land the right to explore for oil and gas. In some situations, title to land will give the owner both the surface and the mineral rights. If title to the land is split, the mineral owner needs access to the land surface to drill and produce oil and gas.

Two important conditions apply to the company's right to explore. First, drilling and production activity must be done in a way that is environmentally and technically acceptable. Second, a company must operate in ways that minimize possible interference with the landowner's use of the land.

### Planning an Oil or Gas Project Selecting a Pipeline or Facility Location

When selecting a pipeline right-of-way or a facility site, the company must consider potential impacts on present and future land uses. The company must

- ensure that you understand what substance the pipeline is to transport or the facility is to handle,

- answer your questions on its plans for soil handling and reclamation, and
- address any other concerns you may have related to the proposed pipeline or facility.

### Selecting a Well Site

When selecting a well site, the company considers subsurface geology, land surface conditions, current and future land use, environmental sensitivity, and reclamation. Well spacing regulations provide requirements about where wells may be located.

A **spacing unit** is the subsurface area that one well can drain. The spacing unit for oil wells in Alberta is normally one well per quarter section of land; for gas wells it is normally one well per section of land. However, reduced spacing and directional drilling are common practices in Alberta.

Inside the spacing unit is a **target area** where the bottom of the well should end.

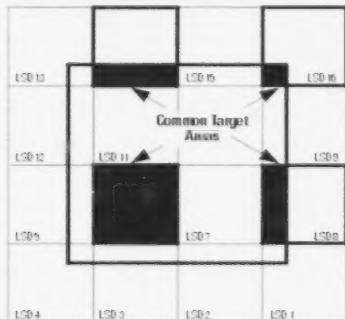

In the example below, the **gas target area** is the centre 100 hectares (250 acres) of the section. Keep in mind that the target area dictates the **subsurface** location for a well, not the **surface** location.

The **oil target area** is the northeastern 16 hectares (40 acres) of the quarter section, as shown in the example below.

Together, the oil and gas target areas overlap and form a **common target area**, as shown in the shaded portions of the figure below. Many companies prefer to drill the common target area if there is a chance to encounter both oil and gas.

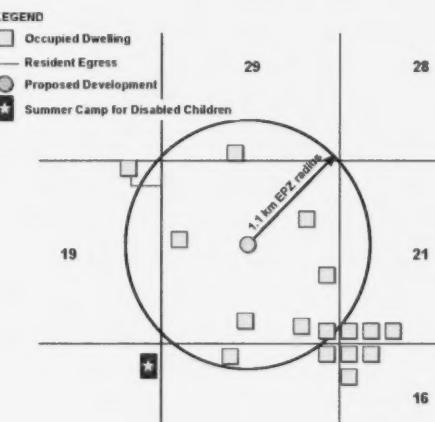

If you disagree with a proposed well location, you may ask the company representative to sketch the spacing unit and target area for the well. This will help you determine if there is flexibility for moving the well site.

### Consultation

In many instances it is appropriate for a company to complete public consultation and notification beyond the

requirement stated in ERCB Directive 056: Energy Development Application and Schedules. The following figure illustrates how a company expanded its participant involvement program beyond the requirement to take into account the special needs and circumstances of the community.

During the initial planning stage of a well, a company began preliminary development of its participation involvement program using the public consultation and notification requirements. With further development of the participant involvement program, the company identified that the requirements would not take into account egress of the resident just outside the northwest area of the development, residents in the community to southeast of the development, or the special needs of the summer camp for disabled children located in the southwest.

The company then adapted its participant involvement program to include the residents, summer camp, and community. By including all the parties during the initial planning stages, the company was able to identify and address the concerns raised by the residents and summer camp prior to its application to the ERCB.

## **Having Your Say**

Landowners, residents, and communities that have concerns related to the development of Alberta's energy resources should become involved as early as possible in the development planning process. It is usually easier to resolve issues at the local level before they become matters of greater concern. Ongoing dialogue also builds trust and is one way for you to have greater influence on energy development.

The table on the next page shows a number of options available to help you resolve concerns about proposed development. As a landowner or resident, there are several key points in the application process when your questions and concerns may be addressed. Note, though, that you have the right to expect any reasonable concerns to be promptly addressed at any point during this process and at any time during the life of the project.

Usually, a company will offer to consult with you at your home. If you and the company cannot resolve your concerns, either party may ask an ERCB staff member to facilitate a meeting or meetings between you and the company. This is "field facilitation."

If objections continue to be unresolved, you or the company may request that the ERCB arrange for a third-party mediator to assist you. This is part of the Appropriate Dispute Resolution (ADR) process. The company may also request a hearing at this time. If you can resolve issues through such discussions with the company, with or without a facilitator or mediator, you may find that you have greater influence on project planning and reducing its impacts.

However, if objections cannot be resolved, the application may go to an ERCB hearing, where the matter will be decided by the ERCB Board.

If you show the ERCB, through a written submission, that your rights may be directly and adversely affected if the Board approves a proposed energy development and you have been unable to resolve your concerns through field facilitation or ADR, you may trigger a public hearing.

The ERCB examines each submission on its own merits to determine the potential impacts on you, taking into account the following factors:

- Does the proposed project have the potential to affect safety or economic or property rights? Examples of such impacts include negative effects from contaminants in water, air, or soil or from noise; negative interference with livelihood or commercial activity on the land; damage to property; and concerns for the safety of persons or animals.
- Are you affected in a different way or to a greater degree than members of the general public?
- Are you able to show a reasonable and direct connection between the activity complained of and the rights or interests you believe to be affected?

By considering your submission in this way, the ERCB can determine if you may be directly and adversely affected by the proposed development.

### **Having Your Say: Options for Resolving Concerns**

Step One	Option One	Option 2	Option 3
Required Consultation or Notification	ADR - Facilitation	ADR - Third-Party Mediation	ERCB Hearing
<i>Directive 056</i> requires industry to notify or consult with those persons whose rights may be directly and adversely affected by proposed developments.	If you have concerns after the required consultation process, an ERCB staff member may be asked to assist. Either you or the company may make this request. Facilitation is the first stage of the Appropriate Dispute Resolution (ADR) process and is optional.	If your concerns remain unresolved, a neutral third-party mediator may be brought in to assist. This is the next stage of the ADR process and is also optional. Agreements made in ADR are confidential.	If third-party mediation fails to resolve your concerns, the matter may go to an ERCB public hearing for a decision.

Further information regarding the ERCB Appropriate Dispute Resolution process is available on the ERCB Web site [www.ercb.ca](http://www.ercb.ca) under Public Zone : ERCB Process.

### **Required EnerFAQs**

The ERCB has put together a number of EnerFAQs on topics of general interest to the public. Regardless of whether the proposed development is a well, pipeline, or facility, the company must either provide or offer all current ERCB EnerFAQs publications as set out on the ERCB Web site.

EnerFAQs continue to be published on topics of general interest to the public. As new EnerFAQs related to energy development become available they will be posted on the ERCB Web site. EnerFAQs may be obtained from the ERCB Web site at [www.ercb.ca](http://www.ercb.ca) or by contacting ERCB Communications through the Customer Contact Centre at 403-297-8311 or toll free: 1-855-297-8311.

## **Appendix 11   Understanding the Participant Involvement Process**

This appendix outlines the rationale and both the required and suggested stages of the Participant Involvement process. It is intended to provide the energy industry with requirements and expectations to assist in participant involvement efforts, both in advance of submitting an application for energy development and throughout the life of a project.

The ERCB, acting in the public interest, intends to raise the regulatory standard for communications between industry and the public and between companies with respect to participant involvement.

“Participant involvement” is an umbrella term encompassing all aspects of public, industry, and regulator interactions and communications for oil and gas development. It implies that each organization, community, group, and individual with a stake in the discovery, development, and delivery of Alberta’s resources is a participant and as such has both specific roles and responsibilities. While the three main participant groups in energy development are industry, the public, and the ERCB, it is recognized that other groups also have a stake in energy development.

Participant involvement is about fostering relationships among all participants that are respectful, responsive, and responsible. Such interactions demonstrate transparency, fairness, consideration of one another’s concerns and pressures, and a commitment to work toward mutually satisfactory resolutions.

### **Roles and Responsibilities**

**Industry** – Industry’s role in participant involvement is to help individuals and other companies to understand the proposed development and the impact it may have upon them. Industry’s responsibility is to make a reasonable effort to resolve concerns prior to filing an application. The nature and extent of the applicant’s obligation to consult with and notify persons whose rights may be directly and adversely affected depends upon the nature of the proposed development and the extent of likely impacts on those affected. As such, the requirements detailed in *Directive 056* should be viewed as a starting point that will be acceptable in most cases, but they may not be sufficient to address all circumstances.

**The Public** - The ERCB application process provides the public with an opportunity to engage with the applicant and to address concerns/objections. There are many steps that the public, individually or collectively, can take to participate in the planning of proposed developments. Early involvement in informal discussions with industry may lead to greater influence on project planning and mitigation of impacts. Accordingly, the public is strongly encouraged to participate in ongoing issue identification, problem solving, and planning with respect to local energy developments. The public is expected to be sensitive to the timing constraints on the applicant.

**The ERCB** - All concerns/objections regarding applications made by persons whose rights may be directly or adversely affected by an approval will be considered by the ERCB (*Energy Resources Conservation Act*, Section 26).

As the regulator of the energy industry, the ERCB has the authority to approve or deny proposed energy developments and to decide which parties have standing in cases of outstanding concerns/objections.

The ERCB assists all stakeholders to understand the regulatory requirements and expectations and how they apply at the local level. The ERCB works with multistakeholder groups to clarify regulatory issues, suggest problem-solving approaches, and facilitate communication.

The ERCB also supports issue mitigation and conflict resolution. It sponsors and encourages the use of innovative approaches to resolving concerns and conflicts, such as the Appropriate Dispute Resolution

(ADR) program. If resolution cannot be reached at the local level, parties whose rights may be directly and adversely affected may request an ERCB hearing.

### **Participant Involvement Process**

The participant involvement process should begin at the conceptual stage and proceed in various forms through to abandonment and reclamation of the site. It is not limited to the pre-application stage of the project. During the participant involvement process, the applicant may move through five stages, depending on the complexity of the project and whether objections or concerns arise. Figure A1 details the ERCB's suggested participant involvement process and alternatives for dealing with public concerns/objections.

Stage 1: Planning oil and gas development proposal

Stage 2: Identifying and engaging potentially directly and adversely affected parties

Stage 3: Addressing concerns/objections

Stage 4: Addressing unresolved concerns/objections

Stage 5: Obtaining ERCB disposition

#### **Stage 1: Planning oil and gas development proposal**

Stage 1 of the participant involvement process begins with the applicant identifying the type of energy development required to meet its needs. Once that has been determined, the company is able to begin developing the appropriate personal consultation and notification program and information packages suited to the proposed energy development.

The applicant then prepares a personal consultation and notification program, which is essential prior to filing an energy development application. The ERCB expects that the level of participant involvement will be based on the complexity of and area sensitivities to the proposed project.

*Directive 056* defines two types of participant involvement: personal consultation and notification. The purpose of personal consultation is to inform parties whose rights may be directly and adversely affected by the proposed application by

- distributing a project description and the ERCB public information package;
- identifying potential impacts;
- responding to questions and concerns;
- discussing options, alternatives, and mitigating measures; and
- seeking confirmation of nonobjection through cooperative efforts.

Notification differs from personal consultation in that communication takes place through written correspondence rather than face-to-face or telephone conversations.

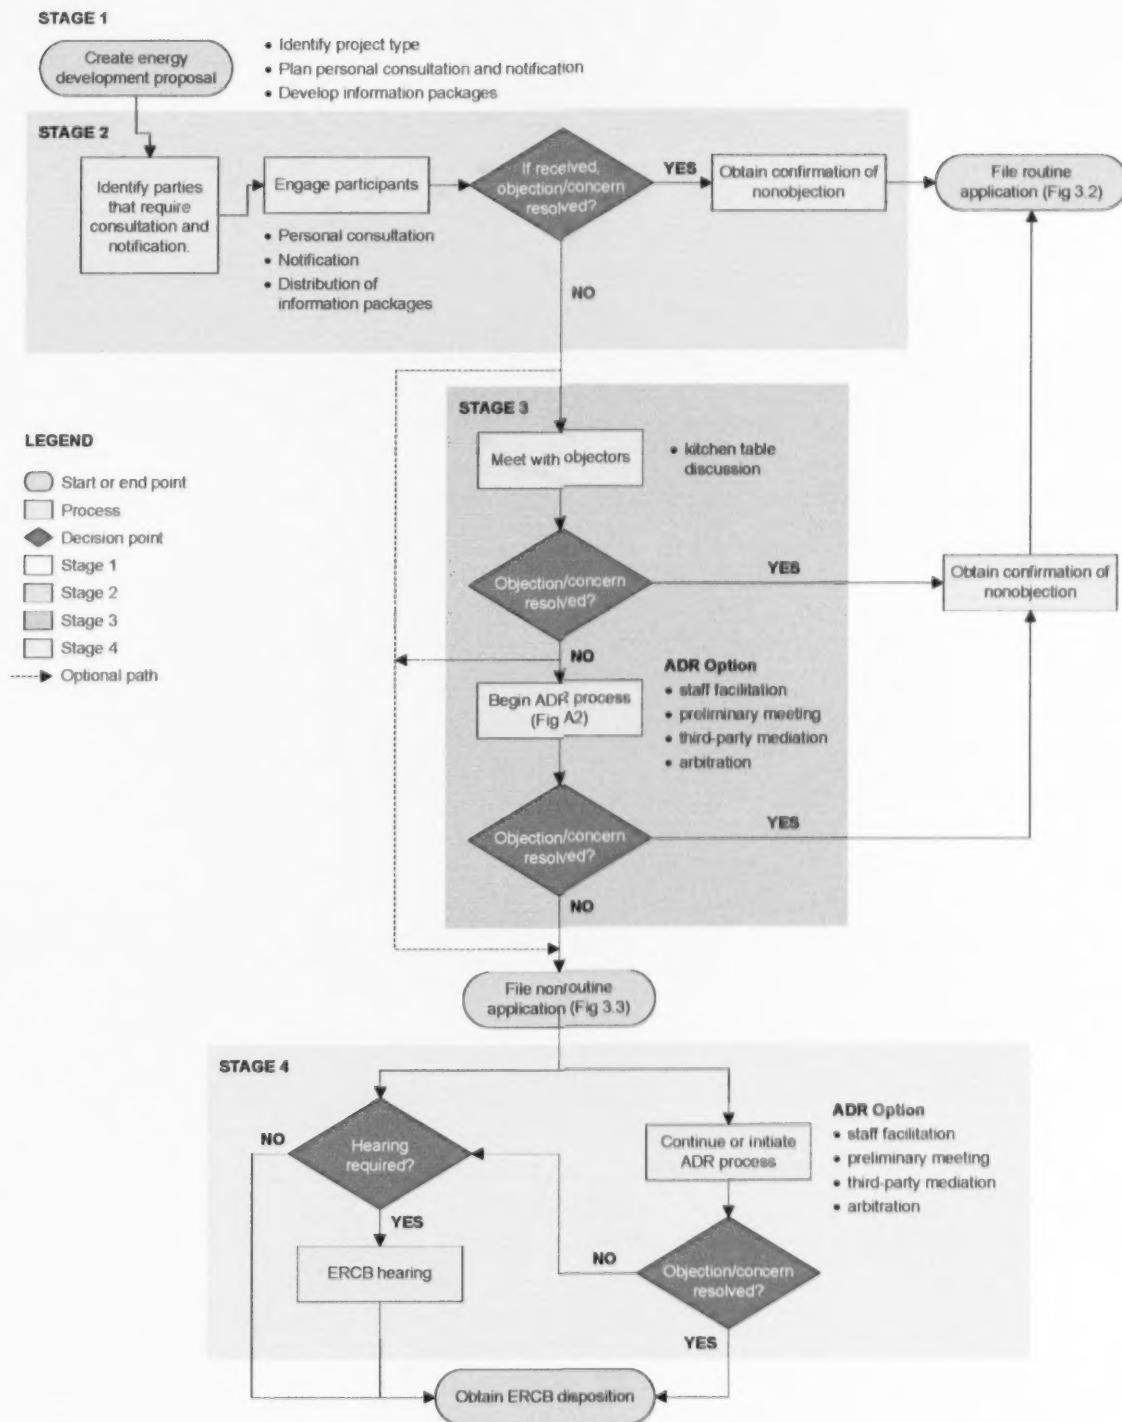

Figure A1. Participant Involvement Process

When planning a personal consultation and notification program, the applicant is expected to speak with both local residents and other licensees to develop an effective participant involvement program engaging, at an early stage of planning, both potentially directly and adversely affected persons and those who have indicated an interest. Local authorities, ERCB Field Centre staff, and the applicant's previous knowledge of the area may help identify needs in the community. Local ERCB Community and Aboriginal Relations staff are also available to assist in the proactive engagement of stakeholders and resolution of public issues.

In some areas of the province, public expectations regarding personal consultation and notification may be higher than in others. For example, when an applicant is new in an area, it should consider introducing itself to landowners who may be affected by its energy projects. Visits in conjunction with written material on its area projects might initiate two-way dialogue and set a positive tone for future dealings. In areas with a history of conflict between landowners and industry, increased communication and fresh efforts and approaches may be more effective than minimal contact.

The applicant is expected to be sensitive to the timing constraints on the public (e.g., planting, harvesting, calving seasons and statutory holidays), to minimize the cumulative impacts of energy development and to show that they have applied good planning practices with respect to the public and the environment.

During the planning of its participant involvement program, the applicant will have assessed its need to reach a broader public forum and may have determined that an information session or public open house meeting is required. When holding broader public meetings or open houses, the applicant must disclose the same project-specific information as it would have to those involved in personal consultation and notification.

If the proposal is part of a larger project, the applicant is expected to discuss the entire project and to explain how it complements other energy development in the area.

Once the applicant has developed its personal consultation and notification program, it is required to provide information to all parties identified for inclusion in its participant involvement program. For all parties this includes the applicant's project-specific information package and the letter from the Chairman of the ERCB. Where personal consultation and confirmation of nonobjection are required, the applicant must also provide the ERCB brochure *Understanding Oil and Gas Development in Alberta*, *EnerFAQs No. 7: Proposed Oil and Gas Development – A Landowner's Guide*, and *EnerFAQs No. 15: Objecting to an Energy Resource Project* and the form *Objecting to an Energy Resource Project* and offer the EnerFAQs identified in Appendix 10. Where notification is required, *Understanding Oil and Gas Development in Alberta* and all the EnerFAQs identified in Appendix 10 must be offered.

## **Stage 2: Identifying and Engaging Potentially Affected Parties**

The applicant must identify all parties whose rights may be directly and adversely affected and include them in the participant involvement program. This includes parties with a direct interest in land, such as landowners, residents, occupants, other industry players, local authorities, municipalities, and other parties who have a right to practice an activity on the land, such as Crown disposition holders.

When determining if an individual is one whose rights may be directly and adversely affected, the ERCB considers the following factors:

- Does the proposed project have the potential to affect safety or economic or property rights? Examples of such impacts include negative effects from contaminants in water, air, or soil or from noise; negative interference with livelihood or commercial activity on the land; damage to property; and concerns for the safety of persons or animals.

- Is the individual affected in a different way or to a greater degree than members of the general public?
- Is the individual able to show a reasonable and direct connection between the proposed development and the rights or interests he/she believes to be affected?

The applicant must also include those people that it is aware of who have concerns regardless of whether they are inside or outside the radius of personal consultation and notification indicated in Tables 5.1, 6.1, 6.2, and 7.1.

The applicant is then required to engage those parties identified for inclusion in the participant involvement program. Engagement includes personal consultation with and notification to all parties whose rights may be directly and adversely affected. Engagement also means that the involvement process is conducted in a respectful, fair, and transparent manner in both the preapplication stage and throughout the life of the project.

Beyond those with whom the applicant is required to engage, the applicant is also expected to involve other parties who express an interest in the proposed development, whether they are located inside or outside the radius outlined in Tables 5.1, 5.4, 6.1, 6.2, and 7.1. Such involvement provides them the opportunity to obtain project-specific information and to understand its possible impacts.

### **Stage 3: Addressing Concerns/Objections**

Prior to filing an application, the applicant must address all questions, objections, and concerns regarding the proposed development and attempt to resolve them. This includes concerns and objections raised by members of the public, industry, government representatives, First Nations, Métis, and other interested parties.

If there are no outstanding concerns/objections and a confirmation of nonobjection has been obtained if required, the applicant may file a routine application. If there are outstanding concerns/objections, the applicant may either attempt to resolve objections or file a nonroutine application with the ERCB.

To address unresolved concerns/objections, the applicant may choose to

- meet again with objectors and attempt to resolve issues through informal “kitchen table” discussions,
- contact the ERCB Facilitation team to request field facilitation,
- pursue resolution through a more formalized third-party mediation process, or
- request a public hearing.

These options are defined in the discussion of ADR on the next page.

### **Stage 4: Addressing Unresolved Concerns/Objections**

If concerns/objections remain unresolved, the ERCB recommends that all applicants proceed with filing a nonroutine application and move to Stage 4 of the participant involvement process, which includes continuing with or initiating ADR concurrently while the application is being processed. At the same time, an applicant may request an ERCB hearing.

If concerns/objections continue to remain unresolved, the ERCB decides the best course of action, which may include denying the application, dismissing the objection, or holding a public hearing.

## **Stage 5: Obtaining ERCB Disposition**

Some types of ERCB dispositions are granting a licence, denying an application, or issuing a hearing decision. All of these possible outcomes affect participants engaged earlier in the process.

Therefore, the applicant must always close the participant involvement loop even if the application is withdrawn. After disposition of the application, the applicant is expected to explain the disposition to potentially directly and adversely affected parties. This should include information on what will be done next and an explanation of how the applicant will meet any commitments made at any point of the participant involvement process, with an emphasis on ongoing information sharing.

## **Appropriate Dispute Resolution**

The ERCB's ADR program (Figure A2) may be used to deal with concerns raised at the participant involvement stage for any *Directive 056* application. Disputes might arise between the public, landowners, and stakeholders on the one hand and a company on the other or between competing companies. The main intention of the ADR program is to assist interested parties to develop a clear understanding of concerns and issues, discuss their interests, and then develop options for resolution. With the assistance of ERCB staff and/or an independent third-party professional, parties meet and try to resolve their dispute.

### **ERCB Staff Facilitation**

ERCB staff facilitation is an informal process in which staff assist the parties to understand regulatory requirements and generate mutually agreeable options. The use of ERCB staff as facilitators normally occurs prior to submission of a licence application but after the company has attempted to negotiate resolution. ERCB staff normally assist through direct meetings but may be able to assist in resolution through phone calls to each of the parties.

If attempts at direct negotiations break down or become problematic, ERCB staff will strongly encourage parties in a public-industry dispute to proceed to a third-party preliminary meeting. The ERCB expects parties in an industry-industry dispute to proceed directly to a third-party preliminary meeting. Participation in ADR does not preclude access to an ERCB hearing or diminish the rights of the parties.

### **Use of Third-Party Professionals**

The use of third-party professionals typically occurs after a nonroutine licence application has been filed. Third-party professionals are also used where relationships, trust, or values are difficult to foster or there are multiple parties involved.

The first step of this component of the ADR program is a preliminary meeting in which parties, assisted by a professional mediator, discuss procedures and reach agreement on the next steps required to resolve their dispute. This ADR option can occur simultaneously (parallel path) with the ERCB's nonroutine licensing process if, for example,

- it is difficult to engage parties,
- there are concerns about timelines and an ERCB hearing date may be required, or
- there are uncertainties about who should participate.

If partial resolution or no resolution results from the facilitation, mediation, or other ADR alternative, then an ERCB disposition will be required.

The ADR program is detailed in ERCB *Informational Letter (IL) 2001-01: Appropriate Dispute Resolution (ADR) Program and Guidelines for Energy Industry Disputes*. Additional information on the use of ADR and its results are found on the ADR Web page. Questions regarding the ADR program may be directed to the ADR coordinator or to members of the stakeholder committee listed on the Web site.

### **ERCB Hearings**

Any person, organization, or company may show through a written submission to the ERCB that its rights may be directly and adversely affected by a proposed energy development. If parties have tried to resolve outstanding concerns/objections on their own through negotiations or ADR without success, that person, organization, or company may trigger a public hearing. The party seeking to trigger a hearing must provide information to the ERCB Board to show that it has rights that may be directly and adversely affected by the Board's decision on the application. The Board does not deal with disputes related to surface rights and compensation; these are reviewed by the Alberta Surface Rights Board.

The ERCB examines each submission on a case-by-case basis to determine the potential impacts on the person(s) in question. If the Board determines that you may be directly and adversely affected by its decision, it considers that you have standing to appear at a hearing.

Once a hearing has been triggered, other interested parties, including parties that may not have standing, ~~may~~ participate in the hearing. Parties that do not have standing but participate in the hearing do not qualify for costs. Note that if the party that triggers the hearing withdraws from the hearing and no other party has standing, the Board may grant the application and cancel the hearing.

If the ERCB decides that it is necessary to hold a hearing to consider an application, it issues a notice of hearing directly to all persons and organizations potentially directly and adversely affected by the application to inform them of the hearing and allow them to file their submissions with the ERCB. A notice may also be published in the local newspaper to inform the general public. The cost of publishing the notice is borne by the applicant. After considering input from the participants, the ERCB decides whether the hearing will be oral or written.

For more detail regarding the ERCB hearing process, see *Directive 029: Energy and Utility Development Applications and the Hearing Process*.

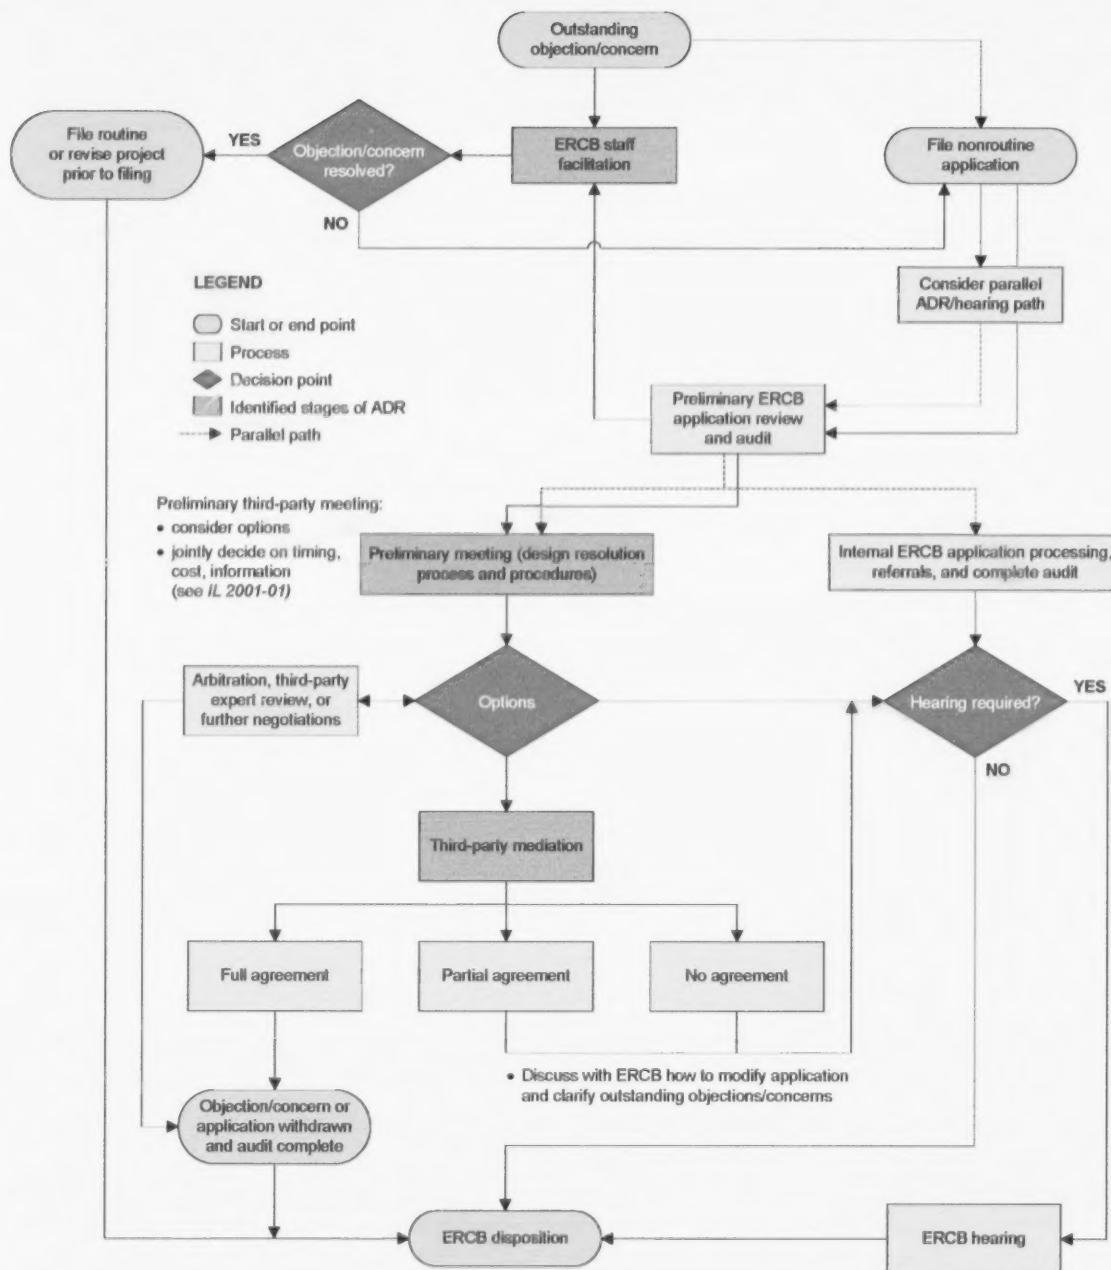

Figure A2. ADR Process

## **Appendix 12    Baseline Water Well Testing Requirements for Coalbed Methane Wells Completed Above the Base of Groundwater Protection**

On April 6, 2006, Alberta Environment announced the new Standard for Baseline Water Well Testing for Coalbed Methane/Natural Gas in Coal Operations (AENV Standard), which became effective May 1, 2006. As the ERCB is responsible to implement and enforce the AENV Standard, on May 8, 2006, it issued *Directive 035*, which modifies ERCB well application requirements. This was introduced to *Directive 056* as a process clarification in July 2006 and is included as Appendix 12 in this edition of *Directive 056*.

Baseline testing of water wells is mandatory for companies wanting to drill or recomplete a well to produce coalbed methane (CBM) above the base of groundwater protection (BGWP). The testing will gather background information on the water well's production capability and water quality.

### **Overview of Application Process**

*Directive 056* sets out the application, participant involvement, and technical requirements that must be met when applying for a new well licence. In addition, applications for a new licence for a CBM well to be completed above the BGWP require that

- the application be filed as a Category B application (B140), as specified in Table 7.1 of *Directive 056*, with a Code 22 for CBM;
- the Applicant File Number/Applicant Reference on Schedule 1 include the text "CBMABGW"
- applicants submit a cover letter confirming that the application as submitted is to drill and complete a CBM well above the BGWP and that prior to application, the offer to test all active water wells and observation wells was made for any wells within a 600 metre (m) radius of the proposed CBM well or the nearest water well within a 600 to 800 m radius if none is identified within 600 m; and
- applicants identify all the active water wells and observation wells, taking into consideration all sources of information, including (but not limited to)
  - AENV data/information,
  - ground truthing,
  - contacting landowners/occupants, and
  - submitting a survey plan or a map with the application that shows the location of all of these wells within the radius referred to above.

Latitude and longitude coordinates (NAD 83) of active water wells and observation wells are required on survey plans or maps.

Applications must include the following documents or be subject to closure in accordance with Section 3.6:

<b>Document</b>	<b>Attachment Type</b>	<b>Attachment Description</b>
Cover letter	Miscellaneous (Ext)	<i>Directive 035</i> cover letter
Routine survey plan, including CBM water well information or Separate survey plan with CBM water well information only	Survey plan Miscellaneous (Ext)	Survey plan and <i>Directive 035</i> information <i>Directive 035</i> survey plan
Map (GPS) with CBM water well information	Miscellaneous (Ext)	<i>Directive 035</i> map

## **Survey Plans/Maps for CBM Wells**

In addition to the survey plan requirements indicated in Section 7.11.1, applicants must indicate on the survey or attach survey plans or maps that show

- any active water well or water observation well within a 600 m radius of the proposed well, or if none is identified within a 600 m radius, the nearest water well or observation well within a 600 to 800 m radius, and
- latitude and longitude coordinates (NAD 83) of active water wells and observation wells on survey plans or maps.

## **Environmental Requirements**

In addition to the requirements indicated in Section 7.11.13, applicants must

- submit a cover letter as described above; and
- identify and document (for auditing purposes)
  - offers to test water and observation wells made prior to application, indicating landowner/occupant and the date of offers;
  - the corresponding acceptances and refusals;
  - in lieu of testing, any water well test result provided by the landowner that complies with the AENV Standard; and
  - if a landowner/occupant refuses to have his/her water well tested, written confirmation from the landowner that testing is not required; if unable to obtain written confirmation, the applicant must diarize the landowner/occupant refusal, provide them with a copy of a notice describing this protocol, and retain a copy.

If the water well has been tested within two years and the landowner/occupant provides a copy of the test showing that it conformed to the AENV Standard's protocols, testing is not required unless requested by the landowner.

If an applicant cannot meet these environmental requirements, it must answer "No" to Schedule 4, Section 11: Surface Impact, question 2, and submit a nonroutine application.

## **Water Well and Observation Well Testing**

When conducting water well testing, applicants must

- test water and observation wells in accordance with the AENV Standard prior to drilling the well; and
- if the wells have been tested and two months have elapsed, confirm that the water well testing data and analysis have been submitted to AENV and the landowner/occupant. If delays occur, confirm that the applicant provided an explanation to AENV and the landowner/occupant and give the revised timeline for testing the water wells that the applicant has committed to.

## **Audit Documentation—Additional Requirements**

In addition to the requirements indicated in Section 7.12.7.1 and Table 7.6, applicants must meet the following requirement:

- If CBM above BGWP information is not on the survey plan, the applicant must submit a separate survey plan or map showing the locations of all the active water wells and observation wells within

the radius referred to above. Latitude and longitude coordinates (NAD 83) of active water wells and observation wells are required on maps.

In addition to the requirements indicated in Section 7.12.11.3 and in Table 7.6, applicants must

- submit documentation demonstrating that all the requirements for the implementation of the AENV Standard as listed under Environmental Requirements above have been completed prior to application. If water well testing was completed prior to application submission, provide information confirming that those tests were completed in accordance with the AENV Standard and that results were submitted accordingly.

### **Compliance Assurance**

In order to ensure that applications are correctly submitted, the ERCB will close any *Directive 056* CBM well licence applications that target completions above the BGWP that do not meet these new requirements. Additionally, audits will be conducted to ensure that applicants have met the requirements of both *Directives 056* and *035* and the AENV Standard.

For any noncompliances associated with *Directive 056*, the ERCB will initiate enforcement action in accordance with *Directive 019: Compliance Assurance* (available on the ERCB Web site) and Table 4.1. The specific Wells – Technical noncompliant events associated with the requirements reiterated in this appendix are as follows:

- Failure to submit a survey plan that meets all applicable requirements, which is assessed as low risk. For the purpose of this appendix, it includes
  - no survey plan with CBM above the BGWP water well information, or no separate CBM above the BGWP survey plan or map.
- Failure to meet *Directive 056* environmental requirements prior to filing the application, which is assessed as high risk. For the purpose of this appendix, this includes
  - no offer to test water wells prior to application,
  - no testing of water wells conducted prior to drilling, and
  - test results not submitted to landowner/occupant or AENV in accordance with the AENV Standard.

### **Further Information**

For additional information on the AENV Standard, see the AENV Web site at [www.waterforlife.alberta.ca/](http://www.waterforlife.alberta.ca/). You may also contact the Alberta Environment Education and Information Centre: phone 780-427-2700 (toll free by first dialing 310-0000); fax 780-422-4086; e-mail [env.infocent@gov.ab.ca](mailto:env.infocent@gov.ab.ca).

For further information on ERCB *Directive 035* or *Directive 056* requirements and for further updates and clarifications, check the ERCB Web site [www.ercb.ca](http://www.ercb.ca) and contact the following:
